first six books of the *Annals* had not then been found. Lee X. promised a pecuniary recompense and indulgence to any one who should find the lost portions of the work. One of his agents, Angelo Arcomboldi, discovered in the monastery of Corvey, in Westphalia, a manuscript which had belonged to Anschaire, the founder of the convent, and a bishop of the church. It contained the first five books of the *Annals*, the last book imperfect. Beroaldus published them at Rome, in 1515, by order of the pope.—Among the numerous editions of Tacitus, the following may be mentioned as the best: that of Gronovius, *L. Bat.*, 1721, 2 vols. 4to; that of Brotier, *Paris*, 1776, 7 vols. 12mo (reprinted by Valpy, *Lond.*, 1823, 4 vols. 8vo); that of Ernesti, *Lips.*, 1760, 2 vols. 8vo; that of Oberlinus, *Lips.*, 1801, 2 vols. 8vo, in four parts, reprinted at Oxford in 1813, 4 vols. 8vo; that of Walther, *Hal. Sax.*, 1831–3, 4 vols. 8vo; and that of Naudet, forming part of Lemaire's collection, *Paris*, 1819–20, 5 vols. 8vo. (*Schöll, Hist. Lit. Rom.*, vol. 2, p. 366, *seqq.*—*Bähr, Gesch. Röm. Lit.*, p. 311, *seqq.*)—II. M. Claudius, a Roman, elected emperor by the senate after the death of Aurelian. The assassination of Aurelian had so much enraged the army, that the soldiers were more intent, for a time, on bringing his murderers to condign punishment than on providing a successor. Even after they had recovered from the first paroxysm of wrath, they hesitated whether they should immediately exercise the right which long custom had placed in their hands, or wait for the advice and concurrence of the senate in choosing a head for the empire. Upon a short deliberation, they adopted the latter alternative, and resolved to write, or else to send a deputation to Rome. The senators, long unused to such deference, knew not how to act when the message came; and, unwilling to incur responsibility, referred the matter back to the legions. But the army, actuated by a very uncommon degree of moderation, renewed their request to the civil authorities to supply them with a general and ruler; and it was not until this reciprocal compliment was urged and rejected three times that the senators agreed to assemble and discharge their duty to the empire. Meanwhile, six or seven months had insensibly passed away; an amazing period, it has been remarked, of tranquil anarchy, during which the Roman world remained without a sovereign, without a usurper, and without a sedition. (*Vopisc., Vit. Tacit.*, c. 1.) On the 25th of September, A.D. 275, the senate was convoked to exercise once more the valuable prerogative with which the constitution of Rome had invested their order. The individual whom they elected inherited the name and the virtues of Tacitus, the celebrated historian, and was, besides, respected for his wisdom, his experience in business, and his mild benevolence. This venerable legislator had already attained his 75th year, a circumstance which he urged, with a great show of reason, for declining the honour which was now assigned him. But his objections were repelled by the most flattering encomiums, and his election was confirmed by acclamation among both citizens and soldiers. It was the wisdom not less than the inclination of the aged emperor that induced him to leave much of the supreme power in the hands from which he received it. He encouraged the senate to resume their wonted authority; to appoint proconsuls in all the provinces, and to exercise all the other privileges which had been conferred upon them by Augustus. His moderation and simplicity were not affected by the change of his condition; the only expense which he permitted to himself was the encouragement which he bestowed on the fine arts, and the only personal indulgences which he would not resign were reading and conversation with literary men. He took great pains to preserve the writings of his ancestor the historian; for which purpose he gave orders that every public library should possess that au-

thor's works, and that, to render this object more practicable, ten copies of them should be transcribed every year in one of the public offices. His short reign, however, prevented any good results from being produced by this decree.—Having obtained the approbation of the citizens, Tacitus departed from the capital to show himself to the army in Thrace. The usual largesses secured his popularity among the soldiers; and the reverence which he found still subsisting for the memory of Aurelian, dictated the punishment of certain chiefs of the conspiracy which had taken away his life. But his attention was soon withdrawn from the investigation of past delinquencies to meet an urgent danger. When the late emperor was making preparations to invade Persia, he had negotiated with a Scythian tribe, the Alani, to re-enforce his ranks with a detachment of their best troops. The barbarians, faithful to their engagement, arrived on the Roman frontiers with a strong body of cavalry; but, before they made their appearance, Aurelian was dead, and the Persian war suspended. In these circumstances, the Alani, impatient of repose, and disappointed of their prey, soon turned their arms against the unfortunate provinces. They overran Pontus, Cappadocia, and Cilicia before Tacitus could show his readiness to satisfy their claims or punish their aggressions. Upon recovering, however, the stipulated reward, the greater number retired peaceably to their deserts; while those who refused to listen to terms were subdued at the point of the sword. (*Vopisc., Vit. Tacitus*, c. 13.—*Zosim.*, 1, 63, *seqq.*—*Zonar.*, 12, 27.) But the triumphs and reign of this venerable sovereign were not of long duration. It is said that he fell a victim to the jealousy of certain officers of rank, who were offended at the undue promotion of his brother Florianus; or to the angry passions of the soldiery, who despised his pacific genius and literary habits. But it is no less probable that he sank under the fatigues of the campaign, and the severity of the climate, to both of which the pursuits of his later years had rendered him a stranger. It is clear, at all events, that he died at Tyana, in Cappadocia, after having swayed the sceptre of the Roman empire about two hundred days. (*Vopisc., Vit. Tacit.*, c. 13.—*Zosim.*, 1, 63.—*Encyclop. Metropol.*, div. 3, vol. 3, p. 57.)

TADER, a river of Spain, near New Carthage, called by Ptolemy the Terebria. It is now the *Segura*. (*Plin.*, 3, 4.—*Ptol.*, 2, 6.)

TÆNÆRUS, a promontory of Laconia, forming the southernmost point of the Peloponnesus. It is now called *Cape Matapan*, which is a modern Greek corruption from the ancient *μέτωπον*, a *front*, the promontory boldly projecting into the Mediterranean. Ancient geographers reckoned thence to Cape Phycus in Africa 3000 stadia, to Cape Pachynus in Sicily 4600 or 4000, and to the promontory of Malaea 670. (*Strabo*, 363.) Near it was a cave, said to be the entrance to Orcus, by which Hercules dragged Cerberus to the upper regions. Pausanias cites another version of the fable from Hecateus of Miletus, which makes the cavern to have been the haunt of a large and deadly serpent, conquered by Hercules, and brought to Enrytheus (3, 25.—*Creuser, Hist. Gr. Fragm.*, p. 46). There was a temple on the promontory sacred to Neptune, and which was accounted an inviolable asylum. It seems to have been a species of cavern. On the promontory, also, was a statue of Arion seated on a dolphin. Tænarus became subsequently famous for the beautiful marble of its quarries, which the Romans held in the highest estimation. It was a species of *Verd Antique*. About forty stadia from the promontory stood the city of Tænarus, afterward called Cene or Ceneapolis. Mr. Morritt, in his journey through Laconia (*Walpole's Memoirs*, vol. 1, p. 56), was informed that there were considerable remains of an ancient city on Cape Grosso, agreeing, as far as the dis-

tances could be ascertained, with Pausanias's description of Cœnepolis. (*Cramer's Anc. Greece*, vol. 2, p. 188.)

TAGES, an Etrurian divinity or Genius, said to have come forth from a clod of earth, an infant in form, but with all the wisdom and experience of an aged person. He first appeared, according to the legend, unto a husbandman near the city of Tarquinii, while the latter was engaged in ploughing. (*Cic., Div.*, 2, 23.—*Creuzer, et Moser, ad loc.*—*Isidor., Orig.*, 8, 9, p. 374, ed. *Arceval.*—*Lydus, de Ostentis*, p. 6, seqq., ed. *Hase.*) According to the last of the authorities just cited, the individual labouring in the field when Tages appeared was Tarchon, the founder of Tarquinii, and the principal hero of Etrurian mythology. (Compare *Müller, Etrusk.*, vol. 2, p. 26.) Another account made Tages the son of Geniæ, and grandson of Jupiter; and it was he that instructed the twelve communities of Etruria in the art of predicting future events by the inspection of victims. (*Festus*, p. 557, ed. *Dacier.*)—The form of this infant deity, his birth, and his attributes, all carry us back to the telluric divinities of Samothrace and Lemnos, and the mystic religion of the Pelasgi. The books, or, rather, oracles of Tages are frequently mentioned by the ancient writers, and were originally in verse. The Romans are said to have translated a part of them into prose. (*Lydus, de Mens.*, p. 130, ed. *Schov.*; *de Ostent.*, p. 190, ed. *Hase.*—*Guignaut*, vol. 2, pt. 1, p. 459, seq.)

TAGUS, a river of Spain, rising among the Celtiberi in Mons Idubeda. It pursues a course nearly due west, varying slightly to the south, and traverses the territories of the Celtiberi, Carpetani, Vettones, and Lusitani, until it reaches the Atlantic Ocean. The Tagus is the largest river in Spain, though Strabo considers the Minus as such, an evident error. The sands of this stream produced grains of gold, and, according to Mela, precious stones. It is now called by the Portuguese the *Tajo*, though its ancient name still remains in general use. At the mouth of this river stood Olisipo, now *Lisbon*. (*Mela*, 3, 1.—*Ovid, Met.*, 2, 251.—*Sil.*, 4, 234.—*Lucan*, 7, 755.—*Martial*, 4, 55, &c.)

TALUS, called otherwise *Pardix*, a nephew of Dædalus. (*Vid.* *Pardix*.)

TAMARA, I. a river of Hispania Tarraconensis, on the northwestern or Atlantic coast, and a short distance below the Promontorium Artabrum, now the *Tambre*. (*Mela*, 3, 1.—*Pliny*, 31, 2.)—II. A town of Britain, on the river Tamarus, in the territory of the Damnonii, and, according to Camden, now *Tamerton*, near Plymouth. (*Camden, Britann.*, p. 158, ed. 1600.)

TAMARUS, I. a river of Britain, now the *Tamar*. (*Camden, Britann.*, p. 158, ed. 1600.)—II. or, according to the *Itin. Ant.* (108), Thamarus, a river of Samnium, rising in the Apennines, and falling into the Calore. It is now the *Tamaro*. (*Cramer's Ancient Italy*, vol. 2, p. 261.)

TAMISUS or TAMASEUS (Ταμῖος, *Steph. Byz.*), a city of Cyprus, southeast of Solœ, and to the northwest of Mount Olympus. The adjacent territory was celebrated for its rich mines of copper, and for the metallic composition prepared on the spot, and called *chalcanthum*. (*Strab.*, 683.) These mines appear to have been known as early as the days of Homer, for they are referred to in the *Odyssey* (1, 182). It has been disputed, however, among commentators, whether the poet alludes to the Cyprian Tamaseus, or the Italian Temessa or Tempea, also famous for its copper mines. (Compare *Steph. Byz.*, s. v. Ταμῖος.—*Nonn.*, *Dionys.*, 13, 445.—*Plin.*, 5, 31.) In the vicinity of Tamaseus was a celebrated plain, sacred to Venus, and where the goddess is said to have gathered the golden apples by which Hippomaneas, to whom she gave them, was enabled to conquer Atalanta in

the race. (*Ovid, Met.*, 10, 644, seqq.—*Cramer's Asia Minor*, vol. 2, p. 388.)

TAMISIS, a river of Britain; now the *Thames*. Cæsar is generally supposed to have crossed this river at Coway Stokes, seven or eight miles above Kingston; but Horeley seems to be of opinion that he forded it near that town. (*Cæs.*, *B. G.*, 5, 11.)

TAMOS, a native of Memphis, and a faithful adherent of Cyrus the younger, whose fleet he commanded. (*Xen., Anab.*, 1, 2, 21.—*Id. ib.*, 1, 4, 2.) After the death of Cyrus, he fled with his vessels, through fear of Tissaphernes, to Egypt, unto King Psammitichus, but was put to death by the latter, together with his children. The object of the Egyptian king, in thus violating the rights of hospitality, was to get possession of the fleet and treasures of Tamos. (*Diod. Sic.*, 14, 19.—*Id.*, 14, 85.)

TANÆRA, a city of Boeotia, situate on an eminence, on the north bank of the Asopus, and near the mouth of that river. Its more ancient appellation was *Grea*. (*Hom., Il.*, 2, 498.—*Lycophr.*, 644.) An obstinate battle was fought in this neighbourhood, between the Athenians and Lacedæmonians, prior to the Peloponnesian war, when the former were defeated. The ruins of Tanagra were first discovered by Cockerell, at *Gramada* or *Grimathi*.—This place was famed among the ancients for its breed of fighting-cocks. (*Cramer's Anc. Greece*, vol. 2, p. 269.)

TANIGERUS or TANIGER, a river of Lucania, rising in the central chain of the Apennines, between *Casal Nuovo* and *Lago Negro*, and, after flowing thirty miles through the valley of *Diano*, loses itself under ground for the space of two miles, and not twenty as it is stated in *Pliny* (2, 108). It reappears beyond *La Polla*, at a place called *Pertosa*, and falls into the Silanus below *Contusari*. The modern name of the river is *Negro*. (*Cramer's Anc. Italy*, vol. 2, p. 377.)

TANÆIS, I. now the *Don*, a large river of Europe, rising, according to Herodotus, in the territory of the *Thysagetes*, from a large lake, and falling into the Palus Mæotis. Herodotus appears to have confounded the Tanæis in the upper part of its course with the Rha or *Volga*. Of the course of the latter, and its falling into the Caspian, he appears to have known nothing. The Tanæis rises in the *Valdai* hills, in the government of *Tula*, and is about 800 miles in length. This river separated in ancient times European and Asiatic Sarmatia. In voyages written more than half a century ago, it is called the *Tane*; at the same time communicating this name to the Palus Mæotis; the modern name *Don* is only a corrupt abbreviation of the ancient appellation. A city named Tanæis, situate at its mouth, and which was the emporium of the commerce of the country, is celebrated in tradition by the Slavons under the name of *Aas-grad*, or the city of *Aas*; and it is remarkable to find the name of *Azof* subsisting on the same site. It may, moreover, be remarked, that this name contributes to compose that of Tanæis, formed of two members, the first of which expresses the actual name of the river. The Greeks in the age of Alexander confounded the Tanæis with the *Iaxartes*. (*Vid.* *Iaxartes*.)—Dr. Clarke (*Travels in Russia*, &c., vol. 1, p. 387, *Lond. ed.*) found the Cossack pronunciation of the name of this river to be *Danaetz*, *Tânaetz*, or *Tanaetz*, and when sounded with quickness and volubility, it appeared to be the same as *Tanæis*. Hence the ancient name of the river may satisfactorily be accounted for. According to the same intelligent traveller, when the word *Tanæis* was introduced into the Greek language, it had reference, not to the *Don*, but to another river, which enters that stream about ninety-nine miles from its mouth, and which, according to a notion entertained from time immemorial by the people in this quarter, it leaves again, taking a northwesterly direction, and

falling into the *Palus Maotis* to the north of all the other mouths of the Don. This northernmost mouth of the Don, owing to the river whose waters its channel is supposed peculiarly to contain, is called *Danætz* also, and, to express either its sluggish current or its lapse into the sea, *Dead Danætz*. The Greeks, steering from the Crimea towards the mouths of the Don, and, as their custom was, keeping close to the shore, entered first this northernmost mouth of the river, and gave it the name of *Tanais*, from its native appellation. As regards the etymology of the name, on which head Dr. Clarke is silent, it may be remarked that *Bayer* (*Comm. Acad. Petr.*, vol. 9, p. 376) supposes an early European people to have once existed, in whose language a word like *Tan*, *Ton*, *Don*, or *Dunai* may have signified "water," from which were gradually derived such names of rivers as *Tanais*, *Danaperis*, *Danaster*, *Danubius* (*Tunose* in the *Nibelungenlied*, v. 6116.—*Δανούβιος* in *Procopius*), *Don*, *Duna*, *Родов* (in *Ptolemy*), *Eridan*, *Ro-dan*, &c. It is a curious confirmation, in part at least, of this hypothesis, that the *Ossetes*, a Caucasian tribe, have the word *Don* in their language as a general term for "water," "river," &c., and designate all mountain streams by this appellation. (Compare *Lehrberg*, *Untersuchungen*, &c., *Petersb.*, p. 400.—*Ritter*, *Vorhalle*, &c., p. 304.)—II. A city in Asiatic Sarmatia, at the mouth of the *Tanais*, which soon became sufficiently powerful, by reason of its extensive commerce, to withdraw itself from the sway of the kings of the *Boeoporus*, and establish its independence. One of these same monarchs, however, by name *Polemo*, subsequently took and destroyed it. It was afterward rebuilt, but never attained its former eminence. The ruins of the place are to the west of the modern *Azof*. (*Plin.*, 6, 7.—*Steph. Byz.*, s. v.)

TANAQUIL, in Etrurian *Tanchufil* (*Müller*, *Etrusker*, 1, p. 72), called also *Caia Cæcilia*, was the wife of *Tarquinius Priscus*, the fifth king of Rome. (*Vid.* *Tarquinius* I.) *Niebuhr* makes the *Tarquini* family of Latin, not of Etrurian origin; and thinks that the name *Caia Cæcilia* belongs to a legend concerning *Tarquinius* entirely different from that which became prevalent. "In the latter legend," observes this eminent writer, "*Tanaquil* comes to Rome with *Tarquinius*, and outlives him; it is not even pretended anywhere that she, too, changed her Etruscan name. *Cæcilia* had a statue in a temple, so intimately was she associated with the older tradition; and her name implies a connexion with *Præneste*, said to have been built by *Cæculus* (*Serv. ad Virg., Æn.*, 7, 681), the hero after whom the *Cæcili* were called. In this point the feigned Etruscan *Tarquinius* has not quite obliterated the traces of the Latin *Priscus*: the historians throw aside altogether what they cannot bring into unison with their accounts." (*Niebuhr's Rom. Hist.*, vol. 1, p. 324, *Cambr. transl.*)—*Tanaquil* was represented in the Roman traditions as a woman of high spirit, and accustomed to rule her husband; hence the name is used by the Latin poets to indicate generally any imperious consort. (*Auson.*, *Epist.*, 23, 31.—*Juvenal.*, *Sat.*, 6, 564.) She was also celebrated in the same legends as an excellent spinster (*lanifica*) and housewife; and her distaff and spindle were preserved in the temple of *Sancus* or *Hercules*. (*Cic.*, *pro Mur.*, 12.—*Plin.*, 8, 48.) It was *Tanaquil* that, after the murder of *Tarquinius Priscus*, managed adroitly to secure the succession to *Servius Tullius*, her son-in-law. (*Vid.* *Tarquinius* I., near the close of that article.)

TANIS, a city of Egypt, at the entrance of, and giving name to, the Tanitic mouth of the Nile, between the *Mendesian* and *Pelusiæ*. This city is the *Zaan* of the Scriptures, and its remains are still called *San*. The *Ostium Taniticum* is now the *Omm-Faredje* mouth. (*Numbers*, 13, 22.—*Isaiah*, 19, 11, 13.)

TANTALIDES, a patronymic applied to the descend-

ants of *Tantalus*, such as *Niobe*, *Hermione*, &c.—*Agamemnon* and *Menelaüs*, as grandsons of *Tantalus*, are called "*Tantalides fratres*" by *Ovid*. (*Her.*, 8, 45, 132.)

TANTALUS, a king of *Lydia*, son of *Jupiter* by a nymph called *Pluto* (*Wealth*), was the father of *Pelops*, and of *Niobe* the wife of *Amphion*.—*Ulysses*, when relating to the *Phæacians* what he had beheld in the lower world, describes *Tantalus* as standing up to the chin in water, which constantly eludes his lip as often as he attempts to quench the thirst that torments him. Over his head grow all kinds of fruits; but, whenever he reaches forth his hands to take them, the wind scatters them to the clouds. (*Od.*, 11, 581, *seqq.*) The passage of *Homer*, however, on which this account rests, was regarded by *Aristarchus* as spurious, according to the scholiast on *Pindar* (*Olymp.*, 1, 97). If we reject the verses of the *Odyssey* which have just been referred to, and the authenticity of which has been farther invalidated by an unedited scholiast whom *Porson* cites (*ad Eurip., Orest.*, 5), we then come, in the order of time, to the account given first by *Archilochus* (*Pausan.*, 10, 21, 12), and after him by *Pindar*. According to this poet, *Jupiter* hung a vast rock in the air over the head of *Tantalus*, which, always menacing to descend and crush him, deprives him of all joy, and makes him "a wanderer from happiness." (*Ol.*, 1, 57, *seqq.*, ed. *Böckh*.—*Böckh*, *ad loc.*) *Pindar* does not mention the place of his punishment, but *Euripides* says it was the air between heaven and earth, and that the rock was suspended over him by golden chains. (*Eurip., Orest.*, 6, 7, 972, *seq.*)—The offence of *Tantalus*, which called down upon him this severe infliction, is variously stated. The common account makes him to have killed and dressed his son *Pelops*, and to have placed his remains as food before the gods, whom he had invited to a banquet, in order to test their divinity. (*Vid.* *Pelops*.) *Pindar*, however, rejects this legend as unbecoming the majesty of the gods, and says, that if ever mortal man was honoured by the dwellers of *Olympus*, it was *Tantalus*; but that he could not digest his happiness. They admitted him, he adds, to feast at their table on nectar and ambrosia, which made him immortal; but he stole some of the divine food, and gave it to his friends on earth. This, according to *Pindar*, was the crime for which he was punished. (*Pind.*, l. c.) *Euripides*, on the other hand, says that the offence of *Tantalus* was his not restraining his tongue; that is, probably, his divulging the secrets of the gods. (*Eurip., Orest.*, 10.)—The residence of *Tantalus* was placed at the foot of *Mount Sipylus* in *Lydia*. Hence, according to another legend, *Jupiter* cast this mountain upon him; for *Pandæus* having stolen the golden dog which had guarded the goat that reared the god, gave it to *Tantalus* to keep. *Mercury* being sent to reclaim the dog, *Tantalus* denied all knowledge of it, and, for his falsehood, the mountain was thrown upon him. (*Schol. ad Pind., Ol.*, 1, 97.—*Anton.*, lib. 36.) This last trifling legend is, as we may easily see, one of the many attempts at localizing the ancient myths; for *Sipylus*, it is plain, was designated to take the place of the mythic rock.—The name *Tantalus* is, like *Sisyphus*, a reduplication, and his myth is evidently one of those handed down from grave old *Pelægic* times. The root of *Tantalus* is probably *τάλλω*, and he represents the man who is *flourishing* and abounding in wealth, but whose desires are insatiable (*θάλαλος*, for euphony made *τάναλος*, the letters *θ*, *τ*, *λ*, and *ν* being frequently commuted.—*Welcker*, *ap. Schwenck*, *Aend.*, p. 265.—*Völcker*, *Myth. der Iap. Gesch.*, p. 355). The Homeric picture exhibits in lively colours the misery of such a state. The other form of the legend represents, perhaps, the cares and fears attendant upon riches; or, it may be, as has ingeniously been conjectured, an im-

TAP

age of the evils of ambition and the inordinate pursuit of honour; for when Tantalus, it was said, had attained his ultimate desire, and was admitted to the table of the gods, his joy was converted into terror by his fancying a rock suspended over his head, and ready to crush him; and he sought permission to resign his seat at the celestial table. (*Alcman, ap. Schol. ad Pind., l. c.*—*Nic. Damasc., ap. Stob., 14, 7.*—*Welcker, das Epische Cyclus, p. 280, seqq.*) It was probably the idea of the great wealth of Lydia that caused the myth of Tantalus to be localized at Sipylus. (*Keightley's Mythology, p. 442, seq.*)

TAPHIA, islands in the Ionian Sea, on the north coast of Ithaca, or, rather, between Leucadia and the east of Acarnania. They form a considerable group, and are often mentioned by Homer and other classical writers as the haunt of notorious pirates. (*Od., 1, 417.*) The principal island is that which is called by Homer Taphos, but by later writers Taphius and Taphiussa (*Strabo, 458*), and is probably the one known to modern geographers by the name of *Meganisi*. Mr. Dodwell informs us that *Calamo*, another of the Taphian group, produces perhaps the finest flour in the world, which is sent to *Corfu*, and sold as a luxury (vol. 1, p. 61). The Taphis were also called *Telabos*. (*Cramer's Anc. Greece, vol. 2, p. 55.*) They were fabled to have received these names from Taphius and Telebos, the sons of Neptune, who reigned there. The Taphians made war against Electryon, king of Mycenæ, and murdered all his sons; upon which the monarch promised his kingdom and his daughter in marriage to whoever could avenge the death of his children upon the Taphians. Amphitryon did it with success, and obtained the hand of the maiden. (*Apollod., 2, 4.*)

TAPHRA, a city in the Tauric Chersonese, on the narrowest part of the isthmus. The ancient name is derived from *rappós*, a ditch or trench, one having been cut close to the town to defend the entrance into the Chersonese. The modern *Prekop* marks the site of the ancient city. (*Mela, 2, 1.*—*Plin., 4, 12.*)

TAPHROB, the strait between Corsica and Sardinia, now the straits of *St. Bonifacio*. (*Plin., 3, 6.*)

TAPROBANA, an island in the Indian Ocean, now called *Ceylon*. The Greeks first learned the existence of this island after the expedition of Alexander, when ambassadors were sent by them to the court of Palimbotha. The account then received was amplified so much, that this island was deemed the commencement of another world, inhabited by antichthones, or men in a position opposite to those in the known hemisphere. Ptolemy, better informed, makes it an island, five times greater, however, than it really is. Strabo speaks of it as though it lay off the hither coast of India, looking towards the continent of Africa. The name of *Salice*, which we learn from Ptolemy to have been the native denomination of the island, is preserved in that of *Selen-dive*, compounded of the proper name *Selen* and the appellative for an island in the Indian language, and it is apparent that the name of *Ceilan* or *Ceylon*, according to the European usage, is only an alteration in orthography. Ptolemy calls it a very fertile island, and mentions as its produce rice, honey (or rather, perhaps, sugar), ginger, and also precious stones, with all sorts of metals; he speaks, too, of its elephants and tigers. It is surprising, however, that neither Ptolemy nor those who preceded him say anything of the cinnamon, which now forms the chief produce of the island. The ancients could not be ignorant of the nature of this article, especially as they called a portion of the eastern coast of Africa by the name of *Regio Cinnamomifera*. (*Strabo, 72.*—*Id., 690.*—*Mela, 3, 7.*—*Plin., 6, 22.*—*Cosmas Indicopl., 11, p. 336.*)

TAPRUS, a small and lowly situated peninsula on the eastern coast of Sicily. Its name has reference to its

TAR

low situation, from *θάπρω*, *sepelio*. It lay off Hybla. The neck of land connecting it with the main island of Sicily was so low that Servius calls the promontory itself an island; and it is even now styled *Isole delhi Manghisi*. (*Virg., Æn., 3, 689.*)

TARAS (*-antis*), I. a son of Neptune, who, according to some, was the founder of Tarentum, called in Greek *Tápas*. (*Vid. Tarentum.*)—II. A small river to the west of Tarentum, now the *Tara*. (*Steph. Byz., s. v. Tápas.*)

TARASCO, a city of Gaul, on the eastern side of the Rhone, and north of Arles. It is now *Tarascon*, lying opposite to Beaucaire. (*Bischoff und Möller, Wörterb. der Geogr., p. 947.*)

TARBELLI, a people of Aquitanic Gaul, at the foot of the Pyrenees, whose chief city was *Aquæ Augustæ*, now *Ags*, or, according to some, *Dax*. (*Cæs., B. G., 3, 27.*)

TARENTUM (in Greek *Tápas*), now *Taranto*, a celebrated city of Lower Italy, situated in the northeastern angle of the Sinus Tarentinus, and in the territory of Messapia or Iapygia. It was founded, according to some, by a Cretan colony before the Trojan war, and received its name from the leader of the colony, Taras, a reputed son of Neptune (i. e., a powerful naval chieftain). In the 21st Olympiad, a strong body of emigrants arrived under Philanthus from Laconia, so that it seemed to be refounded. The new colony established themselves upon an aristocratical plan, enlarged the fortifications of the city, and formed it into a near resemblance of Sparta. Most of the nobles having subsequently perished in a war with the Iapyges, democracy was introduced. The favourable situation of the place contributed to its rapid prosperity. Placed in the centre, as it were, it obtained the whole commerce of the Adriatic, Ionian, and Tyrrhenian Seas. The adjacent country was fertile in grain and fruit; the pastures were excellent, and the flocks afforded a very fine wool. At this most prosperous period of the republic, which may be supposed to date about 400 B.C., when Rome was engaged in the siege of Veii, and Greece was enjoying some tranquillity after the long struggle of the Peloponnesian war, Archytas, a distinguished philosopher of the school of Pythagoras, and an able statesman, presided over her councils as strategos. Her navy was far superior to that of any other Italian colony. Nor were her military establishments less formidable and efficient, since she could bring into the field a force of 30,000 foot and 5000 horse, exclusive of a select body of cavalry called *Hipparchi*. (*Heyne, Opusc. Acad., vol. 2, p. 223.*) The Tarentines were long held in great estimation as auxiliary troops, and were frequently employed in the armies of foreign princes and states. (*Strabo, 280.*—*Ælian, Var. Hist., 7, 4.*—*Polyb., 11, 12.*—*Id., 16, 15.*)—Nor was the cultivation of the arts and of literature forgotten in the advancement of political strength and civilization. The Pythagorean sect, which in other parts of Magna Græcia had been so barbarously oppressed, here found encouragement and refuge through the influence of Archytas, who was said to have entertained Plato during his residence in this city. (*Cic., de Sen., 12.*) And the first sculptors and painters of Greece contributed to embellish Tarentum with several splendid monuments, which ancient authors have dwelt upon with admiration, and which, at a later period, when transferred to Rome, served to decorate the Capitol. But their grandeur was not of long duration; for wealth and abundance soon engendered a love of ease and luxury, the consequences of which proved fatal to the interests of Tarentum, by sapping the vigour of her institutions, enervating the minds and corrupting the morals of her inhabitants. Effeminacy and voluptuousness gradually usurped the place of energy and courage, and the Tarentines became the abandoned slaves of licentiousness and vice. To such excess,

indeed, was the love of pleasure carried, that the number of their annual festivals is said to have exceeded that of the days of the year. Hence the expressions so often applied to it by Horace, of "*molle*" and "*imbelle Tarentum*," and by Juvenal (6, 397), of "*Atque coronatum et petulans madidumque Tarentum*." (Strabo, 280.—Theopomp., *ap. Athen.*, 4, 19.—Clearch., *ap. Eund.*, 12, 4.—*Ælian*, V. H., 12, 30.) Enfeebled and degraded by this system of demoralization and corruption, the Tarentines soon found themselves unable, as heretofore, to overawe and keep in subjection the neighbouring barbarians of Iapygia, who had always hated and feared, but now learned to despise them. These, leagued with the still more warlike Lucanians, who had already become the terror of Magna Græcia, now made constant inroads into their territory, and even threatened the safety of the city. Incapable of exertion, and having no leaders possessed of any military talent or energy, the Tarentines were compelled to call in to their aid experienced commanders from Greece, whom ambition, perhaps, or the desire of gain, might induce to quit their native soil in search of wealth and renown. A more generous motive, perhaps, influenced Archidamus, king of Sparta, who was the first to engage in their defence, for he might regard Tarentum as having just claims to his protection as a Spartan colony. But this valiant prince fell in the first engagement with the enemy. Alexander of Epirus, who was the next ally of the Tarentines, was soon disgusted with their feeble and irresolute conduct, and abandoned their cause to prosecute his own ambitious designs. (Strab., l. c.—*Liv.*, 8, 17.) He was followed by the Spartan Cleomenes, and afterward by Agathocles; but the services of these adventurers were productive of little benefit to the republic, they being more intent on their own interests than those of the people which sought their aid. Tarentum, in consequence of these failures, might have been induced to depend upon her own resources, had the barbarians of Iapygia or Lucania remained her only foes. But a more formidable enemy now entered the lists. This was Rome, who, by continued successes over the Samnites, and the subjection of Apulia, had now extended her dominion nearly to the walls of Tarentum. A pretext for war was soon found by these powerful invaders. An insult said to have been publicly offered one of the Roman ambassadors was here the plea assigned for the declaration of war, and the Tarentines again had recourse, in this emergency, to foreign aid. The valour and forces of Pyrrhus for a time averted the storm; but, when that prince withdrew from Italy, Tarentum could no longer withstand her powerful enemies, and soon after fell into their hands; the surrender of the town being hastened by the treachery of the Epirot force which Pyrrhus had left there. The Tarentines were compelled by the Romans to surrender their arms and their ships of war; their walls were dismantled, and a heavy fine was imposed as the condition of peace. (*Liv., Epit.*, 15.) To this harsh treatment may justly be ascribed the subsequent conduct of the Tarentines during the second Punic war, in declaring for Hannibal, whom they must have regarded more in the light of a deliverer from a state of oppression than as an invader of their country. They opened their gates to his forces, and warmly seconded his efforts to reduce the Roman garrison, which still held out in the citadel. (Polyb., 8, 26.—*Liv.*, 25, 9.) Such, however, was the strength of their fortress, that it effectually withstood all the attacks made upon it; and when the attention of the Carthaginian general was drawn off to other parts of Italy, Tarentum was surprised and recaptured by the Romans, under the command of Fabius Maximus, who treated it as a city taken from the enemy. The plunder obtained by them on this occasion was immense; the pictures and statues be-

ing said to have nearly equalled in number those of Syracuse. Livy commands, on this occasion, the moderation of Fabius, and intimates that he allowed these works of art to remain undisturbed (27, 16); but Strabo asserts that many articles were removed by that general, and, among others, a colossal bronze statue of Hercules, the work of the celebrated Lysippus. From this period the prosperity and political existence of Tarentum may date its decline, which was farther accelerated by the preference shown by the Romans to the port of Brundisium for the fitting out of their naval armaments, as well as for commercial purposes. The salubrity of its climate, the singular fertility of its territory, its purple dye, and its advantageous situation on the sea, as well as on the Appian Way, still rendered it, however, a city of consequence in the Augustan age. Strabo reports that, though a great portion of its extent was deserted in his time, the inhabited part still constituted a large town. That geographer describes the inner harbour as being 100 stadia, or 12½ miles in circuit; a computation, however, which does not agree with modern measurements, which represent the circuit of the harbour at 16 miles. Strabo makes the site of the town very low, but the ground to rise, however, a little towards the citadel.—The modern town now occupies the site of the ancient citadel. (Cramer's *Anc. Italy*, vol. 2, p. 318.)

TARICHĒA, I. a strong city of Palestine, south of Tiberias, and lying at the southern extremity of the Lake of Genesareth, or Sea of Tiberias. Its situation was well adapted for fisheries; and from the process of pickling fish (*ταριχέω*, "*to pickle*"), which was carried on here upon a very extensive scale, the town derived its name. (Phn., 5, 6.—*Joseph.*, B. J., 3, 17.)—II. Several towns on the coast of Egypt bore this name from a similar cause.

TARPA, SPURIUS MÆCIVS or MÆCIVS, a critic at Rome in the age of Augustus. He was appointed, with four others, to examine into the merits of every dramatic production before it was allowed to be represented on the stage; and he is said to have discharged this office with the greatest impartiality. (Horat., *Sat.*, 1, 10, 38.—Compare *Ep. ad Pis.*, 387.)

TARPEIA, I. the daughter of Tarpeius, the governor of the citadel of Rome. She promised to open the gates of the city to the Sabines, provided they gave her their gold bracelets, or, as she expressed it, what they carried on their left arms. Tatius, the king of the Sabines, consented; and, as he entered the gates, to punish her perfidy, he threw, not his bracelet, but his shield upon Tarpeia. His followers imitated his example, and Tarpeia was crushed under the weight of the shields of the Sabine army. (*Liv.*, 1, 11.) This version of the story represents Tarpeia as a venal traitress. Piso, however, one of the earlier annalists, endeavours to exalt the daughter of Tarpeius to a heroine, who meant to sacrifice herself for her country. She was described by him as having planned to make the Sabines, by virtue of their agreement, ratified as it was by oath, deliver up to her their arms and armour, and so to consign them, disarmed, to the Romans: the laying down of the arms was to take place on the Capitol, a spot where not a Roman, except perhaps prisoners, would have been to be found! Livy alludes to this version of the tale, but makes no remark about its utter absurdity. (*Liv.*, l. c.—Compare Niebuhr, *Rom. Hist.*, vol. 1, p. 199, *Cambr. transl.*) Tarpeia was buried on the hill, and from her one of the two summits of the Capitoline Mount took the name of the Tarpeian rock (*Tarpeia Rupes*, called also *Tarpeius Mons*), and from it state criminals were afterward accustomed to be thrown. (Vid. *Tarpeius Mons*.)—Niebuhr, who very properly rejects the whole story about Tarpeia as purely fabulous, observes, that the Roman poet who invented the legend "conceived the poor

Sabines covered with gold, as Fauriel remarks, the bards of modern Greece do their Cleopha. Here is popular poetry unequivocally obvious for one who has eyes to see it. The fiction of Propertius (4, 4) seems to be a transfer, warranted by no tradition, from the history of the Megarian Scylla." (*Rom. Hist.*, vol. 1, p. 192.) The same writer informs us, that the remembrance of Tarpeia's guilt still lives in a popular legend at the present day. "The whole of the Capitoline Hill," he observes, "is pierced with quarries, passages of remote antiquity worked through the loose tufa: many of these have been walled up; but near the houses erected upon the rubbish which covers the Hundred Steps, on the side of the Tarpeian rock that looks towards the forum, beside some ruinous buildings known by the name of the Palazzaccio, several are accessible. A report of a well of extraordinary depth, which must have been older than the aqueducts, since no one would have spent the labour on it afterward, and which, no doubt, secured a supply of water to the garrison during the Gallic siege, attracted me into this labyrinth: we were conducted by girls from the adjoining houses, who related, as we went, that in the heart of the hill the fair Tarpeia sits, covered with gold and jewels, enchanted: he who endeavours to reach her never finds out the way; once only she had been seen by the brother of one of our guides. The inhabitants of this quarter are smiths and low victualers, without the slightest touch of that seemingly living knowledge of antiquity which other classes have drawn from the most turbid sources of vulgar books. Real oral tradition, therefore, has kept Tarpeia for five-and-twenty hundred years in the mouth of the common people, who for many centuries have been strangers to the names of Cloelia and Cornelia." (*Niebuhr, Rom. Hist.*, vol. 1, p. 193.)—II. One of the female attendants of Camilla in the Rutulian war. (*Virg., Æn.*, 11, 656.)

TARPEIUS, SP., the governor of the citadel of Rome under Romulus. (*Vid.* Romulus, Tarpeia, and Capitoline III.)

TARPEIUS MONS, or, more correctly, TARPEIA RUPEX, a celebrated rock at Rome, forming a part of the Mons Capitolinus, and on the steepest side, where it overhangs the Tiber. From this rock state criminals were accustomed to be thrown in the earlier Roman times. It received its name in commemoration of the treachery of Tarpeia, and of her having been killed here by the Sabines.—Vasi gives the present height at fifty-five feet. A modern tourist remarks as follows: "Though it is certain that the Tarpeian rock was on the western side of the Capitoline Mount, it would be in vain to inquire where was the precise spot of execution; whether Manlius was hurled down that part of the precipice at the extremity of *Monte Caprino*, or, that behind the *Palazzo de' Conservatori*. There is still height enough in either to make the punishment both tremendous and fatal; although not only have the assaults of time, war, and violence, but the very convulsions of nature, contributed to lower it; for repeated earthquakes have shattered the friable tufa of which it is composed, and large fragments of it fell as late as the middle of the fifteenth century. The fall of these masses has diminished the elevation in two ways: by lowering the actual height, and filling up the base, to which the ruins of the overthrown buildings that once stood upon it have materially contributed. Still the average of various measurements and computations of its present elevation make it above 60 feet; nor do I think it overrated. Certainly those who have maintained that there would be no danger in leaping from its summit, would not, I imagine, be bold enough to try the experiment themselves. The entrance to it is through a mean, filthy passage, which leads to an old wooden door." (*Rome in the Nineteenth Century*, vol. 1, p. 179, *Am. ed.*)

B A

TARQUINI, one of the most powerful cities of Etruria, and celebrated in history for its early connexion with Rome. It was situate in the lower part of Etruria, near the coast, and to the northwest of Cæra. Strabo ascribes the foundation of the place to Tarchon, the famous Etruscan chief, who is so often mentioned by the poets. Justin makes it to have been founded by some Thessalians and Spinumbri, meaning, doubtless, the Pelasgi and Umbri, who came from Spina on the Adriatic. According to the common account, the progenitor of the Tarquinian family, Demaratus, settled here, and from this city the Tarquinian family came to Rome. Niebuhr, however, holds a different opinion, and makes the Tarquinian family of Latin, not Etruscan, origin. (Consult remarks under the articles Tanaquil, and Tarquinius I.) Some ruins, to which the name of *Turchina* is attached, point out the ancient site of Tarquinii. (*Cramer's Anc. Italy*, vol. 1, p. 197.) The Etrurians regarded Tarquinii as the metropolis, or parent of all their other cities: a strong proof in favour of civilization having come to this country from the sea. (*Müller, Etrusker*, vol. 1, p. 72.)

TARQUINIA, a daughter of Tarquinius, who married Servius Tullius. When her husband was murdered by Tarquinius Superbus, and public rites of sepulture were denied to his remains by the usurper, she, together with a few friends, conveyed away the corpse by night, and gave it a private burial. Tarquinia survived her consort only one day, having died either through grief, which caused her to commit suicide, or else having been put to death secretly by Tarquinius Superbus and his wife. (*Dion. Hal.*, 4, 40.)

TARQUINIUS, I. PRISCVS, the fifth king of Rome. According to the common account, as found in the Latin writers (for Niebuhr's theory will be given at the end of this article), he was a noble and wealthy Tuscan, son of Demaratus, a native of Corinth, who had come from Greece and settled in Etruria. (*Vid.* Demaratus II.) Demaratus having married an Etruscan female of high rank, his son, whose original name was Lucumo, belonged, on the mother's side, to the Lucumones, or ruling caste of Etruria. (*Vid.* Lucumo.) But the pride of that caste would not permit them to suffer a person of mixed descent to participate in their hereditary honours. He married an Etruscan lady of the noblest birth, Tanaquil by name, who could not brook that her husband should be disparaged by her haughty kindred. They left Tarquinii and journeyed to Rome, in the hope of being received by Ancus in a manner more suited to their dignity. They had reached the brow of the Janiculum, and were in sight of Rome, when an eagle hovering over them, stooped, snatched his cap, and, after soaring aloft with it to a great height, again descended and placed it on his head. Tanaquil, versed in the lore of Tuscan augury, understood the omen, and embracing her husband, bade him proceed joyfully, for the loftiest fortunes awaited him. He was received as a Roman citizen, and assumed the name of Lucius Tarquinius. His courage, his wisdom, and his wealth, soon recommended him to the favourable notice of the king, and made him greatly esteemed also by the people generally. On the death of Ancus he was chosen king, and received from the assembly the customary sanction to his assumption of sovereignty. Scarcely was Tarquin seated on the throne, when the Latin states broke the treaty which they had made with Ancus, and began to make inroads upon the Roman territory. Tarquinius marched against them, defeated them in battle, and took and plundered Apiole, where he obtained an immense booty. Prosecuting his victorious career, he made himself master of Cameria, Crustumerium, Medullia, Ameriola, Ficulnea, Corniculum, and Nomentum. The Æqui also felt the power of his arms, and were obliged to humble themselves before him. While he was engaged with the Latins, the Sabines availed themselves

of his absence, mustered their forces, crossed the Anio, and ravaged the country up to the very walls of Rome. Tarquinius returned from his Latin wars, encountered the Sabines, and, after a desperate conflict, drove them from the Roman territories. Next year they again passed the Anio by a bridge of boats, and advanced towards Rome. Tarquinius met them in battle, and, by the superiority of his cavalry, gained a complete victory. During the battle, a party of Romans, sent for that purpose, burned the bridge of boats, so that the routed Sabines were cut off from their retreat and driven into the river, where great numbers of them perished. Their bodies and arms, floating down the Tiber, brought the first intelligence of the victory to Rome. He then crossed the river, inflicted upon them a second defeat, and compelled them to surrender the town and lands of Collatia, which they had previously taken from the Latins. Tarquinius placed a strong garrison in the town, and assigned the capture to his brother's son, who thence took the name of Collatinus. In this war, the king's son, a youth of fourteen, slew a foe with his own hand, and received as a reward of honour a robe bordered with purple, and a hollow ball of gold to be suspended round his neck; and these continued to be the distinctive dress and ornament of Roman youth of patrician rank, till they assumed the *toga virilis*, or manly gown. Tarquinius is likewise said to have engaged in war with the Etruscan nations, to have taken several of their cities, and to have overthrown them, notwithstanding a confederacy of all their twelve states against him. In token of their submission to his power, the Etruscans at length sent him a golden crown, an ivory throne and sceptre, a purple tunic and robe figured with gold, and twelve axes bound up in bundles of rods, to be borne before him, such as they used when their twelve cities chose a common leader in war. These, by the permission of the people, Tarquinius adopted as the insignia of kingly power; and, with the exception of the crown and of the embroidered robe, they remained as such both to his successors on the throne and to the consuls, unless on the days when they went in public triumph to the Capitol. Such were the military exploits ascribed to Tarquinius; and there is nothing so improbable in them as to startle our belief. It is, indeed, manifest from other indications, that about the period assumed as the reign of Tarquinius Priscus, as he is called for sake of distinction, the dominions of Rome must have comprised nearly all the territory which he is said to have conquered, and also that the city must have risen to great wealth and power. The latter point is proved by the great public works which all accounts agree in ascribing to him. He built the cloaca maxima, or great sewers, to drain off the water from between the Palatine and Capitoline, and the Palatine and Aventine Hills. This vast drain was constructed of huge blocks of hewn stone, triply arched, and of such dimensions that a barge could float along in it beneath the very streets of the city. Earthquakes have shaken the city and the adjacent hills; but the cloaca maxima remains to this day unimpaired, an enduring monument of the power and skill of the king and the people by whom it was constructed. The Circus Maximus, or great racecourse, was also a work of this monarch, intended for the display of what were called the great, or Roman games. The forum, with its rows of shops, was also the work of Tarquinius; and he began to surround the city with a wall of massy hewn stones. He likewise made preparation to fulfil a vow to build a great temple on the Capitoline Hill to the chief deities of Rome. To conclude the legendary history of Tarquinius, he is said to have been murdered by the treachery of the sons of his predecessor Ancus Marcius. They, perceiving the favour with which the king regarded Servius Tullius, and fearing an attempt to make him king,

to the exclusion of their own pretensions and hopes, hired two countrymen to pretend a quarrel, and to appear before the king seeking redress. While he was listening to the complaint of one, the other struck him on the head with an axe, and then they both made their escape. The conspirators did not, however, obtain the fruit of their treachery. Tanaquil gave out that the king was not dead, but only stunned by the blow, and had appointed Servius Tullius to rule in his name till he should recover. Servius immediately assumed the ensigns and exercised the powers of royalty. The murderers were seized and punished, and the Marcii fled, disappointed, from the city. When the death of Tarquinius could no longer be concealed, the power of Servius was so well established, that the people were perfectly ready to grant him the usual confirmation in the powers of the sovereignty. (*Hetherington's Hist. of Rome*, p. 19, seqq.)—Such is a sketch of the first Tarquin, as given by the ancient writers. Niebuhr, however, insists that the Grecian origin of the Tarquinian family is a mere and very clumsy invention of the Roman annalists, and utterly at variance with the received chronology. (*Rom. Hist.*, vol. 1, p. 319, seqq.) The notion that Tarquinius was an Etruscan, arose, as he conceives, from the circumstance of his name having been deduced from that of the Etruscan city; so that he seemed, moreover, a suitable person for the Tuscan epoch of Rome to be referred to. "Far from regarding Tarquinius as the birthplace of his race, I hold that race," observes Niebuhr, "of Latin origin. The account which makes him and Collatinus members of nothing more than a single family, is disproved by the fact that a whole Tarquinian house existed at Rome, which was banished along with the last king. We also find mention of Tarquins of Laurentum (*Dion., Hal.*, 5, 54): these may be supposed to have been exiles of that house; but, even assuming this, yet the legend or tradition must have made them turn their steps thither, as it made Collatinus settle at Lavinium. When such a belief was current, assuredly Tarquinius was not looked upon as their home. The Latin origin of the Tarquins is pointed out by the surname of the first king, in the same way in which the names of other patricians pointed out from what people they sprang. Thus we have Aurunculus, Siculus, Tuscus, Sabinus, &c. The name Priscus has the exact form and character of the national names, Tuscus, Cascus, Opscus. The same is the meaning of Priscus as a surname of the Servili, and as the original one of the censor Marcus Porcius, who was born in the land of the Sabines, and descended from Latin ancestors. (*Plut., Vit. Cat.*, c. 1.) Supposing the house of Tarquinius to have sprung from one of the Tyrrhenian cities on the coast, this accounts for that worship of the Grecian gods at the Roman games, which in an Etruscan is quite incomprehensible. Lucumo, too, would have been just such a name for an Etruscan, as Patricius for a Roman. That no such ever occurred among the Tuscans is a matter on which the gravestones, were it needed, might serve as witnesses. If the legends of the Romans give it to individuals, to the ally of Romulus, to the nobleman of Clusium (*Dion. Hal.*, 2, 37.—*Liv.*, 5, 33), and to Tarquinius, it is a proof how utterly uninformed they were on everything that concerned a nation so close to them; a natural consequence of their not understanding a word of its language." (*Niebuhr, Rom. Hist.*, vol. 1, p. 323, seqq.)—II. Superbus, the seventh and last king of Rome. All the Roman annalists, with the exception of Piso, who adulterated what he found, followed Fabius in calling Tarquinius Superbus the son of Priscus; and this account was adopted by Cicero and Livy. On the other hand, Piso the annalist, and Dionysius of Halicarnassus, make Superbus the grandson of Priscus, a refinement which, according to Niebuhr, "destroys all manner of connexion in the

TARQUINIUS.

story of the Tarquins, and necessitates still more falsifications than they themselves had any notion of, in order to restore even a scantling of sense and unity." (*Niebuhr, Rom. Hist.*, vol. 1, p. 320.—Compare, in opposition to this, however, the dissertation of Valla, *Præf.*, not in *Liv.*)—According to the ordinary account, Servius Tullius had given his two daughters in marriage to Tarquinius and his brother Aruns. Now it happened that these daughters were of very unlike tempers, as were also their husbands. The elder Tullia was of a gentle disposition; her younger sister fierce, imperious, and ambitious. Aruns Tarquinius was of a mild and quiet character; his brother Lucius proud, restless, and domineering. To counteract these tempers, Servius had given the gentle princess to the ambitious prince, and made the haughty damsel wife to the mild husband. But this dissimilarity of temper did not produce the effect which he had expected. The fiery temper of each couple became dissatisfied with the one of gentler nature; the milder wife and husband perished by the crimes of their aspiring mates, who were speedily united in a second shameless marriage. Then did the aspiring temper of the one urge on the haughty and ambitious heart of the other, till they resolved to make way to the throne by the murder of the good old man, their king and father. To this attempt Lucius was encouraged by the unconcealed dissatisfaction of the patricians with the influence obtained by the plebeians in the new constitution. Their dissatisfaction was increased by a rumour that Servius intended to abolish the monarchical form altogether, and divide the sway between the two consuls, one to be chosen from the patrician, and one from the plebeian body. Having formed a strong faction among the patricians, Tarquinius went to the senate-house, seated himself in the royal chair, and summoned the senators to meet King Tarquinius. Servius, having heard the rumour, hastened to the senate-house, accused Tarquinius of treason, and laid hold of him to remove him from the royal chair. The usurper instantly seized the old man, dragged him to the door, and threw him with great force down the steps. There he lay for a few moments, stunned and bleeding with the fall; then, rising slowly, staggered away towards his palace. Some ruffians employed by Tarquinius pursued, overtook, and killed him, leaving the body lying bleeding in the street. Meantime, tidings of what was going on had reached Tullia, who immediately mounted her chariot, drove to the senate-house, and saluted Tarquinius as king. He bade her withdraw from such a tumult; and she, on her return, drove her chariot over the body of her newly-murdered father. (*Vid. Tullia.*) Tarquinius, having thus obtained the forcible possession of the throne, declined to submit to the form of an election, or to make the customary appeals to the comitia curiata for the ratification of his kingly power. He seized the crown as if it were hereditary, and seemed resolved to rule without the concurrence of any of the great assemblies. But as he had been raised to the throne by the aid of the patricians, his first act was to gratify them by repealing the privileges which Servius had granted to the plebeians. He suppressed the institution of the comitia centuriata, and even prohibited the meetings of the country tribes at the pagania. But this was only the beginning of his tyranny. He depressed the commons or plebeians; but he had no intention to permit the power of the patricians to become too strong, especially as he was himself but too well aware of their treachery to the former king. He therefore surrounded himself with a body-guard, the ready instruments of his oppression, and, under colour of justice, banished or put to death, on false accusations, all who were either too powerful or too wealthy to be trusted, or whom he suspected of disaffection to himself. In this manner he reduced the patricians into a state of sub-

TARQUINIUS.

jection almost as deep as that into which they had assisted him to reduce the plebeians. Being now possessed of nearly despotic power, he turned his attention to the enlargement of his kingdom. He gave his daughter in marriage to Octavius Mamilius of Tusculum, the most powerful of the Latin chiefs; and partly by intrigues, partly by force, he procured Rome to be acknowledged the head of the Latin confederacy. Herdonius, the only man who dared to oppose his proud demeanour, he caused to be put to death by false accusations, and completely incorporated the Latin troops with those of Rome. The Hernici were also included in this confederacy. One Latin city, Gabii, refused to join this league, and was assailed by Tarquinius. The struggle was long and severe, but at length he obtained possession of it by means of a stratagem, conducted by his son Sextus, similar to that by which Zopyrus gained the city of Babylon for Darius Hystaspis. (*Vid. Tarquinius IV.*) He next turned his arms against the Volsci, and took Sueasa Pometia, where he obtained a very great booty, the tithe of which he retained for his own share. Thus powerful and enriched, he next proceeded to finish the great works left incomplete by his predecessors. He finished the cloaca maxima, and prepared to build the temple which Tarquinius Priscus, during the Sabine war, had vowed to the three great deities, Jupiter, Juno, and Minerva. This edifice is the famous Capitolium. (*Vid. Capitolium.*) About this same time, too, the strange story of the Sibyl is told, which we have noticed under another article. (*Vid. Sibyllæ.*)—The sway of Tarquinius, however, had now nearly reached its limits, and various portents foreshowed its approaching overthrow. According to the legend, the first indications of the coming doom were seen in an unnatural violation of the sacred rites. A huge snake crawled out from an altar in the court of the palace at the time of sacrifice; the fire suddenly died out, and the snake devoured the victim. To ascertain what this prodigy portended, the king sent two of his sons to consult the oracle at Delphi, and the princes took with them their cousin Lucius Junius Brutus. (*Vid. Brutus I.*) The answer of the oracle was, that the king should fall when a dog should speak with human voice. This response was of course intended secretly to apply to Brutus, and his unexpected display of mental ability. (*Vid. Brutus I.*) The young princes also asked which of the king's sons should succeed him; and were answered in general terms, that the regal power should be enjoyed by the person who should first salute his mother. Brutus, as they were departing, purposely stumbled and fell, and, kissing the earth, thus fulfilled, unobserved by his companions, the meaning of the oracle. Soon after this event, Tarquinius waged war against Ardes, the capital of the Rutuli, a people on the coast of Latium; and while his army lay encamped before the place, the affair of Lucretia occurred, which has been detailed under another article (*vid. Lucretia*), and which hurled him from his throne. In vain did the cities of Tarquinii and Veii take up arms to effect his restoration; in vain, according to the common account, did Porsoenna, the Lucumo of Clusium, endeavour to effect the same end (*vid. Porsoenna*); in vain, too, did the Latins exert themselves in his behalf. In a bloody battle fought at the Lake Regillus, the two sons of Tarquinius were slain; and the father at length gave up the contest with his former subjects, and retired to Cumæ, where he ended his days in 259 A.U.C., or 495 B.C. (*Liv.*, 1, 46, *seqq.*—*Dion. Hal.*, 4, 41, *seqq.*—*Hetherington, Hist. Rom.*, p. 26, *seqq.*—Compare *Niebuhr, Rom. Hist.*, vol. 1, p. 448, *seqq.*)—For a very ingenious theory respecting the Tarquin dominion in Rome, differing essentially from that of Niebuhr, and tracing it to Etruria, consult the remarks of Müller (*Etrusker*, vol. 1, p. 118, *seqq.*)—III. Collatinus, the husband of

Lucretia. (*Vid.* Collatinus.)—IV. Sextus, eldest son of Tarquinius Superbus according to Dionysius of Halicarnassus (4, 55), but, according to Livy (1, 58), the youngest. His name is celebrated in the old legend for the stratagem by which he placed the city of Gabii in the power of his father. Having played the part of an insurgent against his parent, the king, for whose anger his wanton insolence afforded a specious provocation, condemned him to a disgraceful punishment, as if he had been the meanest of his subjects. Sextus thereupon came to the Gabines, to all appearance a fugitive: the bloody marks of his ill-treatment, and, above all, the infatuation which comes over such as are doomed to perish, gained him belief and goodwill: at first he led volunteers, then troops were intrusted to his charge; every enterprise succeeded; for booty and soldiers were thrown into his way at certain appointed places: the deluded citizens raised the man, under whose command they promised themselves the pleasures of a successful war, to the dictatorship. The last step of his treachery was yet to come: where the troops were not hirelings, it was a hazardous venture to open a gate. Sextus sent a confidential slave to demand of his father in what way he should deliver up Gabii into his hands. Tarquinius was in his garden when he admitted the messenger into his presence: he walked along in silence, striking off the heads of the tallest poppies with his staff, and dismissed the man without an answer. On this hint Sextus put to death, or, by means of false charges, banished such of the Gabines as were able to oppose him: the distribution of their fortunes purchased him partisans among the lowest class; and, possessing himself of the uncontested rule, he brought the city to acknowledge his father's supremacy. (*Liv.*, 1, 53.—*Dion. Hal.*, 4, 55.) This story, as Niebuhr well observes, is patched up from the well-known two in Herodotus (3, 154; 5, 92.—*Vid.* Zopyrus, and Periander). Besides, it is quite impossible that Gabii should have fallen into the hands of the Roman king by treachery: had such been the case, no one would have granted the Roman franchise to the Gabines, and have spared them all chastisement by the scourge of war, as Tarquinius is said to have done by Dionysius himself (4, 58.—*Niebuhr, Rom. Hist.*, vol. 1, p. 450).—The violence which, some time after this, Sextus offered to Lucretia, was the cause of his father's banishment, and the downfall of the whole line. He himself retired to Gabii, of which his father had before this made him king (*Dion. Hal.*, 4, 58), and was assassinated here by certain persons whom his acts of bloodshed and rapine had roused to vengeance. (*Liv.*, 1, 60.)—V. Aruns, a brother of Tarquinius Superbus. (*Vid.* Aruns I.)—VI. Aruns, a son of Tarquinius Superbus. (*Vid.* Aruns II.)

TARRACO, now *Tarragona*, a town of the Cosetani in Hispania Citerior, on the coast of the Mediterranean, and northeast of the mouth of the Iberus. This was the first place where the Scipios landed in the second Punic war, and which, after having fortified it, they made their place of arms, and a Roman colony. (*Plin.*, 3, 4.—*Solin.*, c. 23, 26.) Tarraco, in consequence of this, soon rose to importance, and in time became the rival of Carthago Nova. It was the usual place of residence for the Roman prætors. On the division of Spain, which took place in the reign of Augustus (*vid.* Hispania), this city gave the name of Tarraconensis to what had been previously called Hispania Citerior. (*Plin.*, l. c.—*Mela*, 2, 6.—Compare *Ukert, Geogr.*, vol. 2, p. 430.)

TARSUS, a river of Troas, near Zeleia, which, according to Strabo, had to be crossed, on account of its meandering route, twenty times by those who followed the road along its banks. Homer styles it Heptaporus, referring to its being crossed seven times. (*Strabo*, 587.)

TARSUS, a celebrated city of Sicilia Campestris, on

the river Cydnus, not far from its mouth. Xenophon gives its name a plural form, *Τάρσοι* (*ἑλασε . . . εἰς Τάρσους*, *Anab.*, 1, 2, 23); later writers, however, adopt the singular, *Τάρσος*. This city was, from the earliest authentic records that we have of it, the capital of Cilicia, and, during the Persian dominion, was the residence of a dependant king. The people of Tarsus ascribed the origin of their city to Sardanapalus, who is said to have built it, together with Anchiale, in one day. (*Vid.* Anchiale.) When, however, the Greeks established themselves here after the conquest of Alexander, they discarded the old account of the origin of Tarsus, and in its stead adopted one of a more poetic cast. Tarsus (*Τάρσος*) in their language signified a *heel*, and also a *hoof*. This name they connected with the old legend, that Bellerophon had been conveyed, in the course of his wanderings, by the winged horse Pegasus to the country of Cilicia. Upon this they founded the fable that the horse Pegasus had stumbled here, and left behind a deep impression of one of his feet. According to another account, he lost a hoof in this quarter; while a third made Bellerophon to have been unhorsed in this place, and, in falling, to have struck the earth violently with his heel. (*Dionys. Perieg.*, v. 869.—*Eustath. ad Dionys.*, l. c.—*Steph. Byz.*, s. v. *Τάρσος*.) Strabo, however, makes the city to have been founded by Triptolemus and his Argive followers, who, in sending for information about the wandering Io, found here the traces of her hoofs. (*Strab.*, 673.) The Greeks, upon their first coming hither, found Tarsus a large and flourishing city, traversed by the Cydnus, a stream 300 feet broad. (*Xen. Anab.*, 1, 2, 23.) It continued to flourish for a long period after, and became so celebrated for learning and refinement as to be the rival of Athens and Alexandria. Alexander nearly lost his life by bathing, when overheated, in the cold stream of the Cydnus, and it was here that Cleopatra paid her celebrated visit to Antony in all the pomp and pageantry of Eastern luxury, herself attired like Venus, and her attendants like Cupids, in a galley covered with gold, whose sails were of purple, the oars of silver, and cordage of silk; a fine description of which may be seen in Shakspere's play of Antony and Cleopatra (*act* 2, *sc.* 2). In the civil wars Tarsus sided with Cæsar, and the inhabitants called their city, out of compliment to him, Joliopolis. This, though it exposed them at first to many annoyances from the opposite party, secured for them, eventually, both freedom and exemption from tribute, after Cæsar had become master of the Roman world. (*Appian, B. C.*, 4, 64.—*Id.*, 5, 7.) Tarsus was the birthplace of St. Paul. (*Acts*, 22, 3.) It still survives, but only as the shadow of its former self. It is now called *Tarsous*, and is in subjection to Adana, an adjacent city. (*Pococke*, vol. 2, p. 256.)—Julian the Apostate was buried in the suburbs of this city. (*Ammian. Marcell.*, 23, 3.—*Mannert, Geogr.*, vol. 6, pt. 2, p. 96, *seqq.*)

TARTARUS (in the plural *-a, -orum*), the fabled place of punishment in the lower world. According to the ideas of the Homeric and Hesiodic ages, it would seem that the World or Universe was a hollow globe, divided into two equal portions by the flat disk of the earth. (*Il.*, 8, 16.—*Hes., Theog.*, 720.) The external shell of this globe is called by the poets *brass* and *iron*, probably only to express its solidity. The superior hemisphere was named *Heaven*, the inferior one *Tartarus*. The length of the diameter of the hollow sphere is given thus by Hesiod. It would take, he says, nine days for an anvil to fall from Heaven to Earth; and an equal space of time would be occupied by its fall from Earth to the bottom of Tartarus. (*Theog.*, 722.) The luminaries which gave light to gods and men shed their radiance through all the interior of the upper hemisphere; while that of the inferior one was filled with eternal gloom and darkness, and its still air

was unmoved by any wind. Tartarus was regarded, at this period, as the prison of the gods, and not as the place of torment for wicked men, being to the gods what Erebus was to men, the abode of those who were driven from the supernal world. The Titans, when conquered, were shut up in it, and in the *Iliad* (8, 13) Jupiter menaces the gods with banishment to its murky regions. The Oceanus of Homer encompassed the whole earth, and beyond it was a region unvisited by the sun, and therefore shrouded in perpetual darkness, the abode of a people whom he names Cimmerians. Here the poet of the *Odyssey* also places Erebus, the realm of Pluto and Proserpina, the final dwelling of all the race of men, a place which the poet of the *Iliad* describes as lying within the bosom of the earth. At a later period, the change of religious ideas gradually affected Erebus, the abode of the dead. Elysium was moved down to it, as the place of reward for the good; and Tartarus was raised up to it, to form the prison in which the wicked suffered the punishment due to their crimes. (*Keightley's Mythology*, p. 32, 39, 43.)

TARTÆSUS, a town of Spain, situate, according to the most general, though not the most correct opinion, in an island of the same name at the mouth of the Bætis, formed by the two branches of the river. No traces of this island now remain, as one of the arms of the river has disappeared. With regard to the actual position of the town itself, much difference of opinion exists both in ancient and modern writers. Mannert is in favour of making Hispalis the Tartæsus of Herodotus, and opposes the idea of its being the same either with Carteia or Gades, as many ancient writers maintain. It could not, according to him, correspond with Carteia, since Tartæsus lay without the Straits of Hercules; nor could it be the same as Gades, since Herodotus speaks of both Gades and Tartæsus by their respective names, and the latter was not subject to the Phœnicians, but had a king of its own. (*Mannert, Geogr.*, vol. 1, p. 294.) According to Strabo, the Bætis itself was anciently called Tartæsus, and the adjacent country Tartæsis. (*Strabo*, 148.) Bochart, however, makes Tartæsus to have been the Tarnish of Scripture, and the same with Gades. (*Geogr. Sacr.*, 3, 7, coll. 170.)

TARUANNA, a city of Gallia Belgica Secunda, in the territory of the Morini, now *Terouenne*. (*Ptolemy—Itin. Ant.*, 376.)

TARVISUM, an ancient city of Venetia, on the river Silla. At a later period it became the seat of a bishopric, and only a town of note about the middle ages. It is now *Treviso*. (*Precep.*, B. G., 3, 1.—*Paul. Diacon.*, 2, 12.)

TATIŒNUS, a Syrian rhetorician, converted to Christianity by Justin Martyr, whom he followed to Rome in the latter part of the second century. After the death of Justin, the opinions of his proselyte took a turn towards those of Marcion, with whom he was contemporary; but, differing from that heresiarch in some material points, he became the head of a sect of followers of his own, who acquired the appellation of Eucratites and Hydroparastats, from the abstinence which they enjoined from wine and animal food, and their substitution of water for the former in the administration of the Eucharist. The *editio princeps* by Gesner, *Tiger.*, 1646, fol., contains merely the Greek text. The best edition is that of Worth (*Gr. et Lat.*), *Oxon.*, 1700, 8vo. Tatian's work is sometimes appended to editions of Justin Martyr. (*Clarke, Bibliograph. Dict.*, vol. 6, p. 156.)

TATIENSES or TITTIENSES, the name of one of the three original Roman tribes. (*Vid. Roma*, p. 1173, col. 1.)

TATVS, TITVS, king of the Sabines, reigned conjointly with Romulus. (*Vid. Romulus*.)

TATTA, a salt lake in the northeastern part of Phrygia, now *Tuzlag* (i. e., "the Salt"). According to

Strabo, it produced salt in such abundance, that any substance immersed in it was very soon entirely covered with the crystal; and birds were unable to fly if they once dipped their wings in it. (*Strab.*, 568.) The lake still furnishes all the surrounding country with salt, and its produce is a valuable royal-farm in the hands of the Pacha of *Kir-Shehr*. In 1638, Sultan Murad IV. made a causeway across the lake, upon the occasion of his army marching to take Bagdad from the Persians. (*Leake's Tour*, p. 70.)

TAUNUS, a mountain range of Germany, lying in a northwest direction from Frankfort on the *Mayne*, between *Wiesbaden* and *Hornberg*. It is now called the *Höhe* or *Heyrich*. (*Bischoff und Müller, Wörterb. der Geogr.*, p. 950.)

TAURI, a people of European Sarmatia, who inhabited Taurica Chersonesus, and sacrificed all strangers to Diana. The statue of this goddess, which they believed to have fallen down from heaven, was fabled to have been carried away to Sparta by Iphigenia and Orestes. (*Herod.*, 4, 99.—*Mela*, 2, 1.—*Pausan.*, 3, 16.—*Eurip.*, *Iphig.*)

TAURICA CHERSONÆSUS. *Vid. Chersonesus III.*

TAURICA, a surname of Diana, because worshipped by the inhabitants of Taurica Chersonesus. (*Vid. Tauri*.)

TAURINI, a people of Liguria, occupying both banks of the Padua, in the earlier part of its course, but especially the country situated between that river and the Alps. The river Orcus (now *Orca*) marked the extent of their territory towards the east. The Taurini are first mentioned in history as having opposed Hannibal soon after his descent from the Alps (*Polyb.*, 3, 80); and their capital, which Appian calls Taurasia (*Bell. Hann.*, c. 5), was taken and plundered by that general, after an ineffectual resistance of three days. As a Roman colony, it subsequently received the name of Augusta Taurinorum, now *Turin* (Turin) in Piedmont. (*Cramer's Anc. Italy*, vol. 1, p. 32.)

TAUROMENIUM, now *Taormino*, a town of Sicily, between Messana and Catana, but nearer the latter than the former. An ancient city named Naxos previously occupied the site of Tauromenium. There were, in fact, two cities of the name of Naxos, both erected in succession on the same spot. The first was destroyed by Dionysius the tyrant, and the inhabitants scattered over Sicily. (*Diod. Sic.*, 14, 15.) The Siculi, instigated by the Carthaginians, subsequently rebuilt the city, but Dionysius again reduced it. Instead of destroying, however, he colonized it with a number of his mercenary soldiers. (*Diod. Sic.*, 14, 59 et 96.) In process of time Syracuse regained her freedom, and Andromachus, a rich inhabitant of Naxos, having invited the old inhabitants of the latter city to return to their home, they accepted the offer. The city now changed its name to Tauromenium, from Taurus, the name of an adjacent mountain, and *νομή*, a place of abode, the appellation being selected as designating more particularly their new place of residence. (*Diod. Sic.*, 16, 7.)—The hills in the neighbourhood were famous for the fine grapes which they produced, and they surpassed almost the whole world for the extent and beauty of their prospects. (*Mannert, Geogr.*, vol. 9, pt. 2, p. 283.)

TAURUS, I. the mountains of Taurus, according to all the descriptions of the ancients, extended from the frontiers of India to the *Ægean Sea*. Their principal chain, as it shot out from Mount *Imans* towards the sources of the Indus, wound, like an immense serpent, between the Caspian Sea and the *Euxine* on the one side, and the sources of the Euphrates on the other. Caucasus seems to have formed part of this line, according to Pliny; but according to Strabo, who was better informed, the principal chain of Taurus runs between the basis of the Euphrates and the Araxes; and the geographer observes that a detached chain of Cau-

casus, that of the Moschian mountains, runs in a southern direction and joins the Taurus. Modern accounts represent this junction as not very marked. Strabo, who was born on the spot, and who had travelled as far as Armenia, considers the entire centre of Asia Minor, together with all Armenia, Media, and Gordyene, or *Koordistan*, as a very elevated country, crowned with several chains of mountains, all of which are so closely joined together that they may be regarded as one. "Armenia and Media," says he; "are situated upon Taurus." This plateau seems also to comprehend *Koordistan*, and the branches which it sends out extend into Persia as far as the great desert of Kerman on one side, and towards the sources of the Gihon and the Indus on the other. By thus considering the vast Taurus of the ancients as an upland plain, and not as a chain, the testimonies of Strabo and Pliny may be reconciled with the accounts of modern travellers. Two chains of mountains are detached from the plateau of Armenia to enter the peninsula of Asia; the one first confines and then crosses the channel of the Euphrates near Samosata; the other borders the Pontus Euxinus, leaving only narrow plains between it and that sea. These two chains, one of which is in part the Anti-Taurus, and the other the Paryadres of the ancients, or the mountain *Tcheldir* or *Keldir* of the moderns, are united to the west of the Euphrates, between the towns of *Sivas*, *Töcas*, and *Kaisariéh*, by means of the chain of *Argæus*, now named *Argh-Dag*, whose summit is covered with perpetual snows, a circumstance which, under so low a latitude, shows an elevation of from 9 to 10,000 feet. The centre of Asia resembles a terrace supported on all sides by chains of mountains. The chain which, breaking off at once from Mount *Argæus* and from Anti-Taurus, bounds the ancient Cilicia to the north, is more particularly known by the name of Taurus, a name which in several languages appears to have one common root, and simply signifies *mountain*. The elevation of this chain must be considerable, since Cicero affirms that it was impassable to armies before the month of June, on account of the snow. Diodorus details the frightful ravines and precipices which it was necessary to cross in going from Cilicia into Cappadocia. Modern travellers, who have crossed more to the west of this chain, now called *Alah-Dag*, represent it as similar to that of the Apennines and Mount *Hæmus*. It sends off to the west several branches, some of which terminate on the shores of the Mediterranean; as the *Cragus*, and the *Masicystes* of the ancients, in Lycia; the others, greatly inferior in elevation, extend to the coasts of the Archipelago opposite the islands of Cos and Rhodes. To the east, Mount *Amanus*, now the *Alma-Dag*, a detached branch of the Taurus, separates Cilicia from Syria, having only two narrow passes, the one towards the Euphrates, the other close by the sea; the first answers to the *Pylæ Amanicæ* of the ancients, the other to the *Pylæ Syriæ*. Two other chains of mountains are sent off from the western part of the central plateau. The one is the *Baba-Dag* of the moderns, which formed the *Tmolus*, the *Messogis*, and the *Sipylus* of the ancients, and which terminates towards the islands of Samos and Chios; the other, extending in a north-west direction, presents more elevated summits, among which are the celebrated *Ida* and the *Mysian Olympus*. Lastly, the northern side of the plateau is propelled towards the *Euxine*, and gives rise to the chain of the *Olgassus*, now *Elkas-Dag*, a chain which fills with its branches all the chain between the *Sangarius* and the *Halys*. Throughout the range of mountains just described, limestone rocks appear to predominate. (*Malte-Brun, Geogr.*, vol. 2, p. 64, *seqq.*)—II. A mountain and promontory on the eastern coast of Sicily, near which *Tauromenium* was built. It is now *Capo di S. Croce*. (*Vid. Tauromenium*).—III. Sta-

tilius Taurus, a friend of Agrippa's, conquered *Lepidus* in Sicily, and gained also many victories in Africa, for which he obtained triumphal honours (B.C. 36). He was twice consul; and is said also to have built the first durable amphitheatre of stone, at the desire of Augustus.—IV. Statilius Taurus, was proconsul of Africa A.D. 53, in the reign of Claudius. On his return, Agrippina, who was anxious to get possession of his fine gardens, induced *Tarquitius*, who had been his lieutenant in Africa, to accuse him of extortion, and also of having practised magic rites. Taurus, indignant at the charge, would not wait for the decision of the senate, but destroyed himself.

ΤΑΥΓΕΤΟΣ, or, in the plural form, ΤΑΥΓΕΤΑ (-orum), part of a lofty ridge of mountains, which, traversing the whole of Laconia from the Arcadian frontier, terminates in the sea at the Promontory of *Tænarus*. Its elevation was said to be so great as to command a view of the whole Peloponnesus, as may be seen from a fragment of the Cyprian verses preserved by the scholiast on *Pindar*. (*Nem.*, 10, 113.) This great mountain abounded with various kinds of beasts for the chase, and supplied also the celebrated race of hounds, so much valued by the ancients on account of their sagacity and keenness of scent. It also furnished a beautiful green marble much esteemed by the Romans. (*Strabo*, 367.—*Plin.*, 37, 18.) In the terrible earthquake which desolated Laconia before the Peloponnesian war, it is related that immense masses of rock, detaching themselves from the mountain, caused dreadful devastation in their fall, which is said to have been foretold by *Anaximander* of *Miletus*. (*Plin.*, 2, 79.—*Strabo*, 367.) The principal summit of *Tægetus*, named *Taletum*, rose above *Bryseæ*. It was dedicated to the sun, and sacrifices of horses were there offered to that planet. This point is probably the same now called *St. Elias*. (*Cramer's Anc. Greece*, vol. 3, p. 216.) "From the western side of the plain," observes *Mr. Dodwell*, "rise the grand and abrupt precipices of *Tægetus*, which is broken into many summits. The bases also of the mountain are formed by several projections distinct from each other, which branch into the plain, and hence produce that rich assemblage and luxuriant multiplicity of lines, and tints, and shades, which render it the finest locality in Greece. All the plains and mountains that I have seen are surpassed in the variety of their combinations and in the beauty of their appearance by the plain of *Lacedæmon* and Mount *Tægetus*. The landscape may be exceeded in the dimensions of its objects, but what can exceed it in beauty of form and richness of colouring!"—The mountain chain runs in a direction nearly north and south, uniting towards the north with the chain of *Lycmon*. Its western side rises from the *Messenian Gulf*, and its eastern foot bounds the level plain of *Amyclæ*, from which it rises abruptly. It is visible from *Zante*, which, in a straight line, is distant from it at least eighty-four miles. The northern crevices are covered with snow during the whole of the year. Its outline, particularly as seen from the north, is of a more serrated form than the other Grecian mountains. It has five principal summits, whence it derived the modern name of *Pentadactylus*, as it was designated by *Constantine Porphyrogenitus*. In winter it is covered with snow, which renders the vicinity extremely cold. In summer it reflects a powerful heat upon the *Spartan plain*, from which it keeps the salubrious visits of the western winds, and thus makes it one of the hottest places in Greece, and subjects the inhabitants to fevers." (*Dodwell's Tour*, vol. 3, p. 410.)—Compare the account of *Colonel Leake* (*Travels in the Morea*, vol. 1, p. 84, 191, &c.).

ΤΑΙΝΥΝ, I. *Apulicum*, a city of *Apulia*, on the right bank of the river *Frento* (*Fortore*). The appellation of *Apulicum* was added to distinguish it from the

town of the Sidicini. Strabo, speaking of the Apulian Teanum, says it was situate at some distance from the coast, and at the head of a lake formed by the sea, which here encroaches so considerably upon the land, that the breadth of Italy between this point and Puteoli did not exceed 1000 stadia. (Strabo, 285.) The ruins of this place are said to exist on the site of *Civitate*, about a mile from the right bank of the *Fortore*, and ten miles from the sea. (Cramer's *Anc. Italy*, vol. 2, p. 272.)—II. Sidicinum, the only city ascribed to the Sidicini, a Campanian tribe. It is now *Teano*, and was distant about fifteen miles from Capua, in a northwest direction. Strabo informs us that it stood on the Latin Way, being the most considerable of all the towns so situated, and inferior to Capua only in extent and importance among the Campanian cities. (Strab., 337, 248.) This fact seems to derive additional confirmation from the numerous remains of walls and public buildings said to be still visible on its ancient site. Teanum became a Roman colony under Augustus. (Front., de Col.—Plin., 3, 5.)—Some cold acidulous springs are noticed in its vicinity by Vitruvius: they are now called *Acqua delle Caldarella*. (Pratilli, *Via Appia*, 2, 9.—Cramer's *Anc. Italy*, vol. 2, p. 194.)

TEIROS, a river of Thrace, rising in the same rock from 38 different sources, some of which are hot, and others cold. Its sources, according to Herodotus, were equidistant from Herum, a city near Perinthus, and from Apollonia on the Euxine, being two days' journey from each. It emptied into the Contadeus, this last into the Agrianes, and the Agrianes into the Hebrus. Its waters were esteemed of service in curing cutaneous disorders. Darius raised a column there when he marched against the Scythians, to denote the sweetness and salubrity of the waters of that river. (Herod., 4, 90, &c.—Plin., 4, 11.)

TEUCHESSE, the daughter of a Phrygian prince, called by some Teuthras, and by Sophocles Teleutas. When her father was killed by Ajax, son of Telamon, at the time the Greeks sacked the towns in the neighbourhood of Troy, the young princess became the property of the conqueror, and by him she had a son called Euryaces. Sophocles introduces her as one of the characters in his play of the Ajax. (Schol. ad Soph., Aj., 200.)

TEUCOSIENS, a Gallic tribe, belonging to the stem of the Volcas, and whose territory lay between the Simis Gallicus and the Ausci, and in the immediate vicinity of the Pyrenees. They appear to have been a numerous and powerful race. A part of them were led off by Sigoveus in quest of other settlements, and, passing through the Hercynian forest, spread themselves over Pannonia and Illyricum, and subsequently made an inroad into Macedonia. From Europe a portion of them then passed into Asia Minor, and at last occupied the central portion of what was called, from its Gallic settlements, Gallatia. Their towns in this country were less numerous than those of their fellow-tribes; but, on the other hand, they could boast of having for their capital the largest and most celebrated city of the whole province, namely, Ancyra. (Vid. Ancyra.—Thierry, *Hist. des Gaulois*, vol. 1, p. 131, seqq.—Cramer's *Asia Minor*, vol. 2, p. 91.)

TESSA or **TESSA**, a city of Arcadia, next to Mantinea, the most ancient and important in the country. It lay in an eastern direction from the southern part of the Mænalium ridge. This place was said to have been founded at a remote period by Tegeus, son of Lycan. At this early period the republic consisted of several small townships, enumerated by Pausanias, which were probably all united by Aleus, an Arcadian chief, who was thus regarded as the real founder of the city. (Pausan., 8, 45.—Strabo, 337.) The Tegeates were early distinguished for their bravery among the Peloponnesian states: they could boast that their

king, Echecmus, had engaged and slain in single combat Hyllus, chief of the Heraclids (Herod., 9, 26), and also of many victories obtained over the warlike Spartans. (Herod., 1, 65.—Pausan., 3, 3.) It was not till the latter had, in compliance with the injunctions of an oracle, gained possession of the bones of Orestes, and conveyed them from the Arcadian territory, that they were enabled to vanquish their antagonists, and compel them to acknowledge their supremacy (1, 65). In the battle of Platæa, the Tegeates furnished 3000 soldiers, and disputed the post of honour with the Athenians, to whom it was, however, adjudged by the Lacedæmonians. In the Peloponnesian war they remained firm in their adherence to Sparta. After the battle of Leuctra, however, the Tegeates united with the rest of the Arcadians in forming a league independent of Sparta, which involved them in hostilities with that power. (Xen., *Hist. Gr.*, 6, 5, 16.) Tegea, having subsequently entered into the Achaean confederacy, was taken by Cleomenes, from whom it was recaptured by Antigonus Doseon. (Polyb., 2, 48.) It successfully resisted, some time after, the attack of Lycurgus, tyrant of Sparta (5, 17, 1), but yielded to Machanidas; after his defeat and death it was, however, reconquered by Philipæmen (11, 18, 7; 16, 36). Tegea was the only town in Arcadia which in Strabo's time preserved some degree of consequence and prosperity (Strabo, 388); and, if we may judge from the description of Pausanias, it still continued to flourish more than a century later. The vestiges of this ancient city are to be seen on the site now called *Piali*, about an hour east of Tripolizza; but they consist only of scattered fragments, and broken tiles and stones, which cover the fields. Other ruins are to be seen on the site of *Palaio Episkopi*, some hundred yards from the village of *Piali*. (Cramer's *Anc. Greece*, vol. 3, p. 350, seqq.)

TEIOS. Vid. Teos.

TELIMON, a king of the island of Salamis, son of Æacus and Endeis. He was brother to Pelæus, and father to Teucer and Ajax, the latter of whom is, on that account, often called "*Telamonius heros*." Telamon was banished, with Pelæus, from his father's court, for the accidental murder of their step-brother Phocus; and, embarking on board a vessel, he was thrown upon the island of Salamis. Here he was not only hospitably entertained by its king Cychreus, but received from him his daughter Glaucé in marriage, with the promise of succession to the throne. After the death of Glaucé he married Peribœa, the daughter of Alcathoüs; and, on the conquest of Troy by Hercules, whom he accompanied and aided, he received from that hero the hand of Hesione, daughter of Laomedon, and sister of Priam, from which last-mentioned union sprang Teucer, who was, therefore, the half-brother of Ajax. Telamon distinguished himself at the Calydonian boar-hunt, and also in the Argonautic expedition; and, when the Trojan war broke out, he despatched his sons Ajax and Teucer to sustain that glory, to which the feebleness of age precluded him from any longer aspiring. Ajax slew himself in the course of the war, on account of the arms of Achilles, which had been awarded to Ulysses; and the indignation of Telamon at the supineness of Teucer in not having avenged his brother's death, caused him to banish the young prince from his native island. (Vid. Teucer.—Soph., Aj.—Apollod., 3, 12, 6, &c.—Hygin., fab., 97.)

TELAMONIDES, a patronymic given to the descendants of Telamon.

TELOCHINES, an ancient race in the island of Rhodes, said to have been originally from Crete. They were the inventors of many useful arts, and, according to Diodorus, passed for the sons of the Sea. (Diod. Sic., 5, 55.) Hence Simmias the Rhodian made *Ζέφυ* (a word meaning "sea") their mother. (Compare Be-

chart, *Phal.*, p. 371, where the line from Clemens of Alexandres, *Strom.*, 5, p. 374, is corrected.) With respect to their names and number, the ancient writers differ. Nonnus applies to them the two Dactyli-names *Kelmis* and *Damnareneus*. (*Dionys.*, 14, 36.) Tzetzes, on the other hand, names five Telchines, *Actæus*, *Megaleus*, *Ormenus*, *Nikon*, and *Simon*. (*Chil.*, 7, 125.) The Telchines are also represented as powerful enchanter, who hold in control the elements, and could bring clouds, rain, hail, and snow at pleasure. (*Hesych.*, s. v. *Θελχίτες*.—*Suid.*, s. v. *Τελχίτες*.—*Zenobius*, *Proverb.*, 5, 131.—*Hæck*, *Kreta*, vol. 1, p. 345, seqq.—*Id.* *ib.*, vol. 1, p. 354.—Consult remarks at the commencement of the article *Rhodus*.)

TELEBŌM or **TELEBŌIA**, a people of *Ætolia*, called also *Taphians*. (*Vid.* *Taphis*.)

TELEBŌIDES, islands between *Leucadia* and *Acarania*. (*Vid.* *Taphis*.)

TELEBŌNUS, a son of *Ulysses* and *Circe*, born in the island of *Æsea*, where he was educated. When arrived at the years of manhood, he went to *Ithaca* to make himself known to his father, but he was shipwrecked on the coast, and, being destitute of provisions, he plundered some of the inhabitants of the island. *Ulysses* and *Telemachus* came to defend the property of their subjects against this unknown invader; a quarrel arose, and *Telegonus* killed his father without knowing who he was. He afterward returned to his native country, and, according to *Hyginus*, he carried thither his father's body, where it was buried. *Telemachus* and *Penelope* also accompanied him in his return, and soon after the nuptials of *Telegonus* with *Penelope* were celebrated by order of *Minerva*. *Penelope* had by *Telegonus* a son called *Italus*. *Telegonus* was said to have founded *Tusculum* in *Italy*, and, according to some, he left one daughter called *Mamilia*, from whom the patrician family of the *Mamilii* at *Rome* were descended. (*Horat.*, *Od.*, 3, 29, 8.—*Ovid*, *Past.*, 3, 4.—*Trist.*, 1, 1.—*Hygin.*, *fab.*, 137.)

TELEBŌNUS, a son of *Ulysses* and *Penelope*. He was still in the cradle when his father went with the rest of the Greeks to the Trojan war. At the end of this celebrated contest, *Telemachus*, anxious to see his father, went in quest of him; and, as the place of his residence and the cause of his long absence were then unknown, he visited the court of *Menelaus* and *Nestor* to obtain information. He afterward returned to *Ithaca*, where the suitors of his mother *Penelope* had conspired to destroy him; but he avoided their snares, and by means of *Minerva* he discovered his father, who had arrived in the island two days before him, and was then in the house of *Eumæus*. With this faithful servant and *Ulysses*, *Telemachus* concerted how to deliver his mother from the importunities of her suitors, and his efforts were crowned with success. After the death of his father, *Telemachus* is said to have gone to the island of *Æsea*, where he married *Circe*, or, according to others, *Cassiphone*, the daughter of *Circe*, by whom he had a son called *Latinus*. (*Hom.*, *Od.*—*Hygin.*, *fab.*, 95, 125.)

TELEPHUS, I. a king of *Mysia*, son of *Hercules* and *Ange*, the daughter of *Aleus*. He was exposed as soon as born on Mount *Parthenius*, on the confines of *Argolis* and *Arcadia*; but the babe was protected by the care of the gods; for a hind, which had just calved, came and suckled him; and the shepherd, finding him, named him *Telephus* from that circumstance (*Τῆλεφος*, from *ἐλαφος*, a hind.) *Aleus* gave his daughter *Ange* to *Nauplius*, the son of *Neptune*, to sell her out of the country; and he disposed of her to *Teuthras*, king of *Teuthrania*, on the *Cajster*, in *Mysia*, who made her his wife. *Telephus* having, when grown up, consulted the oracle respecting his parents, came to *Mysia*, where he was kindly received by *Teuthras*, whom he succeeded in his kingdom. *Telephus*, after

this, married one of the daughters of King *Priam*, and, as the son-in-law of that monarch, prepared to assist *Priam* against the Greeks, and with heroic valour attacked them when they had landed on the *Mysian* coast. The carnage was great, and *Telephus* would have been victorious had not *Bacchus*, who protected the Greeks, suddenly raised a vine from the earth, which entangled the feet of the monarch, and laid him flat on the ground. *Achilles* immediately rushed upon him, and wounded him so severely that he was carried away from the battle. The wound was mortal, and *Telephus* was informed by the oracle that he alone who had inflicted it could totally cure it. Upon this, application was made to *Achilles*, but in vain; till *Ulysses*, who knew that *Troy* could not be taken without the assistance of one of the sons of *Hercules*, and who wished to make *Telephus* the friend of the Greeks, persuaded *Achilles* to obey the directions of the oracle. *Achilles* consented; and as the weapon which had given the wound could alone cure it, the hero scraped the rust from the point of his spear, and, by applying it to the sore, gave it immediate relief. It is said that *Telephus* showed himself so grateful to the Greeks, that he accompanied them to the Trojan war, and fought with them against his father-in-law. For other versions of the legend of *Telephus*, especially his exposure in infancy, consult the remarks of *Heyne* (*ad Apollod.*, 3, 9, 1). *Euripides*, in his play entitled *Telephus*, adopted that form of the narrative which made *Telephus* and his mother to have been shut up in an ark or coffer, and cast into the sea, the waves of which bore them to the mouth of the river *Caicus*. (*Heyne*, l. c.) The wanderings and poverty of *Telephus*, while in quest of his parents, are often alluded to by the poets. (*Aristoph.*, *Nub.*, 918.—*Id.*, *Ran.*, 866.—*Horat.*, *Epist. ad Pis.*, 96.—*Hygin.*, *fab.*, 101.)

TELLUS, the goddess of the Earth. (*Vid.* *Ops*, and *Terra*.)

TELMESUS or **TELMISUS**, I. the last city of *Lycia* towards the west, and at the head of the *Glaucus Sinus*. It was famous for the skill possessed by its inhabitants in the art of divination (*Arrian*, *Exp. Alex.*, 2, 3), and they were consulted at an early period by *Croesus*, king of *Lydia*. (*Herod.*, 1, 78.) The ruins of *Telmessus* are found at *Méti*, the port of *Makri*. The theatre, and the porticoes and sepulchral chambers excavated in the rocks at this place, are some of the most remarkable remains of antiquity in *Asia Minor*. (*Leake's Tour*, p. 128.—Compare *Clarke's Travels*, vol. 3, p. 292, seqq., *Lond. ed.*; and *Fellows' Excursion in Asia Minor*, p. 244, seq.)—II. A city of *Caria*, about sixty stadia to the southeast of *Halicarnassus*, and on the *Sinus Ceramicus*. (*Suid.*, s. v. *Τελμεσίς*.—*Larcher*, *Herod.*, *Tabl. Geogr.*, s. v.)—III. A city of *Psidia*, on the confines of the *Solymai*, southeast of *Themisonium*. Its more usual name was *Termaissus*. (*Arrian*, *Exp. Alex.*, 1, 27.)

TELO MARTIUS, a city and harbour on the coast of *Gallia Narbonensis Secunda*, now *Toulon*. It appears to have been an obscure place among the ancients, and to have grown into a city from a large colour establishment commenced here by the Romans in the fifth century. The *Itin. Ant.* (566) alone makes mention of it. (*Bischoff und Müller*, *Wörterb. der Geogr.*, p. 958.)

TELEPHŪSA, a city of *Arcadia*, forty stadia from *Caina*, and in a northeastern direction from *Herna*. *Pausanias* found it in ruins and nearly deserted; but in earlier times it appears to have been a place of some note, and celebrated for the worship of the goddess *Erimys* and *Apollo Onceus*, whose temples were to be seen at a place called *Onceum*, on the banks of the *Ladon*. (*Pausan.*, 8, 25.—*Steph. Byz.*, s. v. *Ὀυνέσιον*.) The city derived its name from *Telephusa*, a daughter of the river *Ladon*. There was a fountain

here, the waters of which were so extremely cold, that Tiresias was fabled to have died of drinking of them. The site of this place is supposed by Sir W. Gell to correspond with the kalybea of *Vexina* (*Itinerary of the Morea*, p. 120); but Müller is inclined to identify it with *Katzioule*, which is described by Gell as a miserable place in the neighbourhood of a large ruined city. (*Dorians*, vol. 2, p. 448, *Oxford transl.*—*Cramer's Anc. Greece*, vol. 3, p. 323.)

TEMENUS, son of Aristomachus, and one of the Heraclids. (*Vid.* Heraclides.)

TEMERINDA, according to Pliny (6, 7), the Scythian name for the Palus Mæotis.—Compare the remarks of Ritter (*Vorhalle*, p. 161, *seqq.*).

TEMESA, I. a town of the Brutii, southwest of Terina, and near the coast. It was a place of great antiquity, and celebrated for its copper-mines, to which Homer is supposed to have referred in the *Odyssey* (1, 182). This circumstance, however, is doubtful, as there was a town of the same name in Cyprus (*Strabo*, 255); while others, again, considered the Homeric Temesa as identical with Brundisium. (*Eustath. ad Hom., Od., l. c.*) In Strabo's time these mines appear to have been exhausted. The situation of Temesa is not fully ascertained. Opinions vary between *Malvito*, *San Lucito*, *Torre Loppa*, and *Torre del piano del Casale*. (*Cramer's Anc. Italy*, vol. 2, p. 418.)—II. According to some, the same with Brundisium. (*Vid.* preceding article.)—III. A place in the island of Cyprus. (*Vid.* Temesa I.)

TEMPE (*plur. neut.*), a valley in Thessaly, between Mount Olympus at the north and Ossa at the south, through which the river Peneus flowed into the Ægean. The poets have described it as a most delightful spot, with cool shades and verdant walks, which the warbling of birds rendered more pleasing and attractive. Tempe extended about five miles in length, but varied in its breadth so as to be in some places only a plethrum (about 100 feet) or a little more.—Ælian has left a very animated and picturesque description of its scenery (*Var. Hist.* 3, 1).—It appears to have been a generally received notion among the ancients, that the gorge of Tempe was caused by some great convulsion in nature, which, bursting asunder the mountain-barrier by which the waters of Thessaly were pent up, afforded them an egress to the sea. Modern travellers differ in their accounts of this celebrated vale. Hawkins (*Walpole's Collect.*, vol. 1, p. 517) states that "the scenery by no means corresponds with the idea that has been generally conceived of it, and that the eloquence of Ælian has given rise to expectations which the traveller will not find realized." He would seem, however, to have confounded the Vale of Tempe with the narrow defile which the Peneus traverses between Mount Olympus and Mount Ossa, near its entrance into the sea. Professor Palmer, of Cambridge, appears to have been more successful in the search. "After riding nearly an hour close to the bay in which, the Peneus discharges itself, we turned," says this traveller, "south, through a delightful plain, which, after a quarter of an hour, brought us to an opening between Ossa and Olympus; the entrance to a vale, that, in situation, extent, and beauty, amply satisfies whatever the poets have said of Tempe." (*Walpole's MSS. Journal*, *Clarke's Travels*, pt. 2, a. 3, p. 274.—Consult *Cramer's Description of Ancient Greece*, vol. 1, p. 378.)

TENCHTHERI, a nation of Germany, who, in conjunction with the Usipetes, crossed the Rhine, were defeated by the Romans, and found protection and new settlements among the Sicambri. In their most flourishing period, the Tenchtheri dwelt in the southern part of the Duchy of Cleve, and also in that of Berg; they also took part in the confederacy of the Cherusci. (*Cæs., B. G.* 4, 16.—*Tac., Ann.* 13, 56.—*Id., Hist.* 4, 21.—*Id., Germ.* 32.)

8 B

TENEDOS, an island of the Ægean, off the coast of Troas, about 56 miles to the north of Lesbos, whither the Greeks retired, as Virgil relates, in order to surprise the Trojans. (*Æn.* 2, 21.—*Id.* 254.) This island was at an earlier period called Leucophrys, from its white cliffs (*Eustath. ad Il.*, p. 33.—*Lycophr.* 346); and it took the name of Tenedos from Tennes, son of Cycnus. (*Vid.* Tennes.) Tenedos received a colony of Æolians (*Herod.* 1, 149.—*Thucyd.* 7, 57), which flourished for many years, and became celebrated for the wisdom of its laws and civil institutions. This we collect from an ode of Pindar, inscribed to Aristagoras, prytanis or chief magistrate of the island. (*Nem.* 11.) Aristotle is known to have written on the polity of Tenedos. (*Steph. Byz., s. v. Tenedos.*) Apollo was the principal deity worshipped in the island, as we know from Homer (*Il.* 1, 87). According to the same poet, Tenedos was taken by Achilles during the siege of Troy. (*Il.* 11, 624.) When the prosperity of Tenedos was on the decline, the inhabitants placed themselves under the protection of the flourishing city of Alexandria Troas. At a still later period, it derived again some importance from the granaries which Justinian caused to be erected there, for the purpose of housing the cargoes of corn brought from Egypt and intended for Constantinople, but which were frequently delayed by contrary winds blowing from the Hellespont. (*Procop., Ed. Justin.* 5, 1.) There were several proverbs connected with the history of Tenedos, which may be found in Stephanus of Byzantium (*s. v. Tenedos*). It may be worth while to remark, that Nymphiodorus, a geographical writer quoted by Athenæus, affirmed, that the women of Tenedos were of surpassing beauty (13, p. 60).—When Chandler visited this island, which retains its ancient name, he found there "but few remains of antiquity worthy of notice; in the streets, the walls, and burying-grounds were pieces of marble and fragments of pillars, with a few inscriptions." (*Travels in Asia Minor*, p. 22.) The position of Tenedos, so near the mouth of the Hellespont, has always rendered it a place of importance in both ancient and modern times. Borchart derives the name from the Phœnician word *Tinadum*, *red clay*, which was found here and used for earthenware. (*Cramer's Asia Minor*, vol. 1, p. 111, *seqq.*)

TENNES (or, more correctly, TENNEA), son of Cycnus, king of Colone, a town of Troas, and of Proclea the daughter of Clytius. After the death of Proclea, Cycnus married Philonome, daughter of Craugassus, who became enamoured of Tennes; but, finding it impossible to shake his principles of duty, she accused him to her husband of a dishonourable act of violence. The father believed the charge, and, confining Tennes and his sister in an ark or coffer (*τὴ λάβρα*), cast them into the sea. They both, however, came safe to Tenedos, then called Leucophrys, the name of which Tennea changed to Tenedos after himself, and became monarch of the island. Some time after, Cycnus discovered the guilt of his wife Philonome, and, as he wished to be reconciled to his son, whom he had so grossly injured, he went to Tenedos; but, when he had secured his ship to the shore, Tennes cut the fastenings with a hatchet, and suffered his father's ship to be tossed about in the sea. From this circumstance, the *hatchet of Tennes* became proverbial to intimate a resentment that could not be pacified. Some, however, suppose that the proverb arose from the severity of a law made by a king of Tenedos against adultery, by which the guilty were both decapitated with a hatchet, and under which law his own son suffered death. (*Suid., s. v. Τενίδος ἐννήγορος.*) Tennes, as some suppose, was killed by Achilles as he defended his island against the Greeks, and he received divine honours after death. (*Pausan.* 10, 4.—*Hæracl. Pont., Polit.* p. 209.—*Strabo* 380, 604.—*Conon, Narrat.* p. 24, 130.)

TENOS, a small island in the *Ægean*, near Andros, called also *Hydrussa*, from the number of its springs: It was very mountainous, but produced excellent wines, universally esteemed by the ancients. Tenos was about 15 miles in extent. The capital was also called Tenos. Near the town was situate a temple of Neptune, held in great veneration, and much frequented by the inhabitants of the surrounding isles, who came thither to offer sacrifices to the god. (*Strabo*, 487.—*Mela*, 2, 7.—*Ovid*, *Met.*, 7, 469.)

TENTYRA (*plur.*) and TENTYRIS, a city of Egypt in the Thebaid, situate on the Nile, to the northwest of Koptos. This city was at variance with Ombos, the former killing, the latter adoring, the crocodile; a horrid instance of religious fury, which took place in consequence of this quarrel, forms the subject of the fifteenth satire of Juvenal. About half a league from the ruins of this city stands the modern village of *Denderah*. Among the remains of Tentyra is a temple of Isis, one of the largest structures in the Thebaid, and by far the most beautiful, and in the best preservation. It contained, until lately, the famous zodiac, which was framed in the ceiling of the temple. This interesting monument of former ages was taken down by a French traveller, M. Lelorrain, after the most persevering exertions for twenty days, and transported down the Nile to Alexandria, whence it was shipped to France. The King of France purchased it for 150,000 francs. The dimensions of the stone are twelve feet in length by eight in breadth, including some ornaments, which were two feet in length on each side. In thickness it is three feet. The planisphere and the square in which it was contained were alone removed, the side ornaments being allowed to remain. To obtain this relic of former ages proved a work of immense labour, as it had actually to be cut out of the ceiling and lowered to the ground. Many conjectures have been advanced by the learned, especially of France, on the antiquity of this zodiac; but recent discoveries have shown the folly of these speculations; the temple having been, in fact, erected under the Roman sway, and the name of the Emperor Nero appearing upon it. (*Am. Quarterly*, vol. 4, p. 43.)

TEOS or TEIOS, a city on the east of Ionia, situated upon a peninsula southwest of Smyrna. It belonged to the Ionian confederacy, and had a harbour which Livy calls Gerasticus (37, 27). During the Persian sway we learn that the inhabitants, despairing of being able to resist the power of that great empire, abandoned nearly all of them their native city, and retired to Abdera in Thrace. This colony became so flourishing in consequence, that it quite eclipsed the parent state. (*Herod.*, 1, 168.—*Strab.*, 633.) Teos is celebrated in the literary history of Greece for having given birth to Anacreon, and also to Hecateus the historian, though the latter is more frequently known by the surname of the Abderite. (*Strab.*, l. c.) This town produced also Protagoras the sophist, Scythianus an Iambic poet, Andron a geographical writer, and Apellion the great book-collector, to whom literature is indebted for the preservation of the works of Aristotle. Though deserted, as we have already remarked, by the greater part of its inhabitants, Teos still continued to exist as an Ionian city, as may be seen from Thucydides (3, 32). The chief produce of the Teian territory was wine (*Liv.* 37, 27), and Bacchus was the deity principally revered by the inhabitants. It is singular that Pliny (5, 38) should rank Teos among the islands of Ionia; at most, it could only be reckoned as a peninsula. The site once occupied by this ancient city is now called *Boudroun*. (*Cramer's Asia Minor*, vol. 1, p. 353.)

TERTIA, I. the wife of Cicero. She became mother of M. Cicero, and of a daughter called Tulliola. Cicero repudiated her, and she married Sallust, Cicero's enemy, and, afterwards Messala Corvinus.

She lived to her 103d, or, according to Pliny, to her 117th year. (*Plut.*, *Vit. Cic.*—*Val. Max.*, 8, 13.—*Ep. ad Attic.*, 11, 16, &c.)

TERENTIUS, I. a Roman, to whom Longinus dedicated his treatise on the Sublime.—II. Maurus, a grammarian. (*Vid.* Maurus Terentianus.)

TERENTIUS PUBLIUS, a Latin comic poet, a native of Carthage, born about the 560th year of Rome. In what manner he came or was brought to the latter city is uncertain. He was in his earliest youth the slave of one Terentius Lucanus at Rome, whose name has been perpetuated only by the glory of his slave. Having obtained his freedom, he became the friend of Lælius and the younger Africanus, and it is both probable in itself, and appears to have been credited as a fact by the ancients, that he was assisted in the composition of his dramas by Lælius and Scipio, as amateur critics. After he had given six comedies to the stage, Terence left Rome for Greece, whence he never returned. According to one account he perished at sea while on his voyage from Greece to Italy, bringing with him a hundred and eight comedies, which he had translated from Menander. According to others, he died in Arcadia for grief at the loss of those comedies, which he had sent before him by sea to Rome. In whatever way it was occasioned, his death happened at the early age of thirty-four, and A.U.C. 694.—The titles of his six plays are as follows: the *Andria*, *Eunuchus*, *Heautontimoroumenos*, *Adelphi*, *Phormio*, and *Hecyra*.—His *Andria* was not acted till the year 587; two years, according to the Eusebian Chronicle, after the death of Cæcilius; which unfortunately throws some doubt on the agreeable anecdote recorded by Donatus, of his introduction, in a wretched garb, into the house of Cæcilius, in order to read his comedy to that poet, by whom, as a mean person, he was seated on a low stool, till he astonished him with the matchless grace and elegance of the *Andria*, when he was placed on the couch, and invited to partake the supper of the veteran dramatist. Several writers have conjectured that it might be to some other than Cæcilius that Terence read his comedy; or, as it is not certain that the *Andria* was his first comedy, that it might be some of the others which he read to Cæcilius. Supposing the Eusebian Chronicle to be accurate in the date which it fixes for the death of Cæcilius, it is just possible that Terence may have written and read to him his *Andria*, two years previous to its representation.—Most, if not all, of Terence's plots were taken by him from the Greek stage. He has given proof, however, of his taste and judgment in the additions and alterations made on those borrowed subjects; and, had he lived an age later, when all the arts were in full glory at Rome, and the empire at its height of power and splendour, he would have found domestic subjects sufficient to supply his scene with interest and variety, and would no longer have accounted it a greater merit "*Græcæ transferre quam proprias scribere*."—Terence was a more rigid observer than his predecessors of the unities of time and place; but in none of his dramas, with a single exception, has that of plot been adhered to. The simplicity, and exact unity of fable in the Greek comedies would have been insipid to a people not thoroughly instructed in the genuine beauties of the drama. Such plays were of too thin texture to satisfy the somewhat gross and lumpy taste of a Roman audience. The Latin poets, therefore, bethought themselves of combining two stories into one; and this junction, which we call the double plot, affording the opportunity of more incidents, and a greater variety of action, was better suited to the tastes of those they had to please. Of all the Latin comedians, Terence appears to have practised this art the most assiduously. Plautus has very frequently single plots, which he was enabled to support by the force of drollery. Terence, whose genius led

another way, or whose taste was abhorrent from all sort of buffoonery, had recourse to the other expedient of double plots; and this probably gained him the popular reputation of being the most artful writer for the stage. The *Hecyra* is the only one of his comedies of the true ancient cast; hence the want of success with which it met on its first and second representations. When first brought forward, in 589, it was interrupted by the spectators leaving the theatre, attracted by the superior interest of a boxing-match and rope-dancers. A combat of gladiators had the like unfortunate effect when it was attempted to be again exhibited in 594. The celebrated actor, L. Ambivinus, encouraged by the success which he had experienced in reviving the condemned plays of Cæcilius, ventured to produce it a third time on the stage, when it received a patient hearing, and was frequently repeated. Still, however, most of the old critics and commentators speak of it as greatly inferior to the other plays of Terence. On the whole, however, the plots of Terence are, in most respects, judiciously laid: the incidents are selected with taste, arranged and connected with inimitable art, and painted with exquisite grace and beauty.—In the representation of characters and manners, Terence was considered by the ancients as surpassing all their comic poets. In this department of his art, he shows that comprehensive knowledge of the humours and inclinations of mankind, which enabled him to delineate characters as well as manners with a genuine and apparently unstudied simplicity. All the inferior passions which form the range of comedy are so nicely observed and accurately expressed, that we nowhere find a truer or more lively representation of human nature.—Erasmus, one of the best judges of classical literature at the revival of learning, says that there is no author from whom we can better learn the pure Roman style than from the poet Terence. It has been further remarked of him, that the Romans thought themselves in conversation when they heard his comedies. Terence, in fact, gave to the Roman tongue its highest perfection in point of elegance and grace. For this *ineffabilis amenitas*, as it is called by Heinseus, he was equally admired by his own contemporaries and the writers in the golden period of Roman literature. He is called by Cæsar *puri sermonis amator*, and Cicero characterizes him as

"Quicquid come loquens, ac omnia dulcia dicens."

Even in the last age of Latin poetry, and when his pure simplicity was so different from the style affected by the writers of the day, he continued to be regarded as the model of correct composition. Ausonius, in his beautiful poem addressed to his grandson, hails him, on account of his style, as the ornament of Latium. Among all the Latin writers, indeed, from Ennius to Ausonius, we meet with nothing so simple, so full of grace and delicacy—in fine, nothing that can be compared to his comedies for elegance of dialogue, presenting a constant flow of easy, genteel, unaffected conversation, which never subsides into vulgarity or grossness, and never rises higher than the ordinary level of polite conversation. Of this, indeed, he was so careful, that when he employed any sentence which he had found in the tragic poets, he stripped it of that air of grandeur and majesty which rendered it unsuitable for common life and comedy. The narratives in particular possess a beautiful and picturesque simplicity. As to what may be called the poetical style of Terence, it has been generally allowed that he has used very great license in his versification. Politian is thought to have been the first who at all divided his plays into lines; but a separation was afterward more correctly executed by Erasmus. Priscian says that Terence uses more licenses than any other writer. Bentley, after Priscian, admitted every variety of iambic and trochaic measure; and such

were the apparent number of licenses and mixture of different species of verse, that, according to Westerbovius, in order to reduce the lines to their original accuracy, it would be necessary to evoke Lælius and Scipio from the shades.—As regards the respective merits of Terence and Plautus, it may be observed that the former was chiefly desirous of recommending himself to the approbation of a select few, who were possessed of true wit and judgment, and the dread of whose censure always kept him within the bounds of good taste, while the sole object of Plautus, on the other hand, was to excite the merriment of an audience endued with little refinement. If, then, we merely consider the intrinsic merit of their productions, without reference to the circumstances or situation of the authors, still Plautus will be accounted superior in that vivacity of action and variety of incident which inflame curiosity and hurry on the mind to the conclusion. We delight, on the contrary, to dwell on every scene, almost on every sentence of Terence. Sometimes there are chasms in Plautus's fables, and the incidents do not properly adhere; in Terence all the links of the action depend on each other. Plautus has more variety in his exhibition of characters and manners, and more art in working up materials from the different employments and pursuits of men; but his pictures are often overcharged; while those of Terence are never more highly coloured than becomes the modesty of nature. The language of Plautus is more rich and luxuriant than that of Terence, but is far from being so equal, uniform, and chaste. It is often stained with vulgarity, and sometimes swells beyond the limits of comic dialogue; while that of Terence is *puro simillimus omni*. The verses of Plautus are, as he himself calls them, *numeri innumeri*; and Hermann declares that, at least as now printed, they are full of every kind of error. Terence attends more to elegance and delicacy in the expression of passion, Plautus to comic expression. In fact, the great object of Plautus seems to have been to excite laughter among his audience, and in this object he completely succeeded; but for its attainment he has sacrificed many graces and beauties of the drama. The humour of Plautus consists chiefly in words and actions, that of Terence in matter. The pleasantries of Plautus, which were so often flat, low, or extravagant, finally drew down the censure of Horace, while Terence was extolled by that poetical critic as the most consummate master of dramatic art. In short, Plautus was more gay, Terence more chaste; the first has more genius and fire, the latter more manner and solidity. Plautus excels in low comedy and ridicule, Terence in drawing just characters, and in maintaining them to the last. The plots of both are artful, but Terence's are more apt to languish, while Plautus's spirit maintains the action with vigour. His invention was greatest; Terence's art and management. Plautus gives the stronger, Terence a more elegant delight. Plautus appears the better comedian of the two, Terence the better poet. Plautus shone most on the stage, Terence pleases best in the closet. (*Dunlop's Roman Literature*, vol. 1, p. 378, seqq., *Lond. ed.*—*Malkin's Classical Disquisitions*, p. 5, seqq.)—The best editions of Terence are, that of Bentley, *Cantab.*, 1736, and *Amst.*, 1787, 4to (that of Amsterdam being the better of the two); that of Westerbovius, *Hag. Com.*, 1736, 2 vols. 4to; and that of Zeune, *Lips.*, 1774, 2 vols. 8vo; beautifully, but not very accurately, reprinted at the London press in 1830, 2 vols. 8vo.—II. Varro. (*Vid.* Varro I.) TARRUS (two syllables), I. a king of Thrace. He married Progne, the daughter of Pandion, king of Athens, whom he had assisted in a war against Megara; and he offered violence to his sister-in-law Philomela, whom he was conducting to Thrace by desire of Progne. (*Vid.* Philomela, and Progne.)

TER

TERGESTUM, a city of Venetia, in the territory of the Carni, now *Trieste*. It was situate at the northeastern extremity of the Sinus Tergestinus. In Strabo we find it sometimes called *Tergesta*, or *Tergestum* in the plural. (*Strab.*, 814.) The Greeks knew it by the name of *Tergestrum*. (*Artemid.*, ap. *Steph. Byz.*—*Dionys. Perieg.*, v. 384.) It suffered severely, on one occasion, from a sudden incursion of the Iapydes. (*Appian*, B. III., 18.—*Strabo*, 207.)

TERINA, a town of the Brutii, on the coast of the Mare Tyrrhenum. It is now *St. Euphemia*. The adjacent bay was called Sinus Termenus. The earliest writers who have noticed this place are Scylax (*Periplus*, p. 5) and Lycophron. Strabo informs us that it was destroyed by Hannibal, when he found that he could no longer retain it. It was probably restored at a later period, as we find it named by Pliny and Ptolemy. (*Cramer's Anc. Greece*, vol. 2, p. 416.)

TERMINA. *Vid. Lycia*.

TERMINALIA, an annual festival at Rome, observed in honour of the god Terminus, in the month of February. It was then usual for peasants to assemble near the principal landmarks which separated their fields, and, after they had crowned them with garlands and flowers, to make libations of milk and wine, and to sacrifice a lamb or a young pig. This festival was originally established by Numa; and though at first it was forbidden to shed the blood of victims, yet, in process of time, landmarks were plentifully sprinkled with it. (*Ovid, Fast.*, 2, 641.)

TERMINUS, a divinity at Rome, who was supposed to preside over boundaries. His worship was first introduced at Rome by Numa, who persuaded his subjects that the limits of their lands were under the immediate care and superintendence of Heaven. His temple was on the Tarpeian rock, and he was represented with a human head, without feet or arms, to intimate that he never moved, wherever he was. It is said that when Tarquin the Proud wished to build a temple on the Tarpeian rock to Jupiter, the god Terminus alone refused to give way. (*Ovid, Fast.*, 2, 641.—*Plut.*, *Vit. Num.*)

TERPANDER, a lyric poet and musician of Lesbos, 670 B.C., whose date is determined by his appearance in the mother-country of Greece: of his early life in Lesbos nothing is known. The first account of him describes him in Peloponnesus, which at that time surpassed the rest of Greece in political power, in well-ordered governments, and probably also in mental cultivation. It is one of the most certain dates of ancient chronology, that, in the 28th Olympiad (B.C. 676), musical contests were first introduced at the feast of Apollo Carneus, and at their first celebration Terpander was crowned victor. He was also victor four successive times in the musical contest at the Pythian temple of Delphi. In Lacedæmon, whose citizens, from the earliest times, had been distinguished for their love of music and dancing, the first scientific cultivation of music was ascribed to Terpander (*Plut.*, *de Mus.*, c. 9); and a record of the precise time had been preserved, probably in the registers of public games. Hence it appears that Terpander was a younger contemporary of Callinus and Archilochus; so that the dispute among the ancients, whether Terpander or Archilochus were the older, must probably be decided by supposing them to have lived about the same time. At the head of all the inventions of Terpander stands the seven-stringed cithara. The only accompaniment for the voice used by the early Greeks was a four-stringed cithara, the *tetrachord*; and this instrument had been so generally used, and held in such repute, that the whole system of music was founded upon the tetrachord. Terpander was the first who added three strings to this instrument, as he himself testifies in two extant verses. (*Euclid, Introd. Harm.*, p. 19.)

—For some remarks on Terpander's invention, and on

TER

the Greek musical scale generally, consult *Müller, Hist. Gr. Lit.*, p. 151, *seqq.*

TERPSICHORE, one of the Muses, daughter of Jupiter and Mnemosyne. She presided over dancing, of which she was reckoned the inventress, and in which, as her name intimates, she took delight (from *terpsis*, "to delight," and *choros*, a chorus or dance). To her was sometimes ascribed the invention of the cithara, and not to Mercury. She is represented like a young virgin crowned with laurel, and holding in her hand a musical instrument. (*Juv.*, *Sat.*, 7, 85.)

TERRA, one of the most ancient deities in classical mythology, wife of Uranus, and mother of Oceanus, the Titans, Cyclopes, Giants, Them, Rhea, Themis, Phoebe, Tethys, and Mnemosyne. (*Vid. Ops*, and *Tellus*.)

TERRACINA, a city of Latium, called also **ANXUR**, situate on the seacoast, in a northeastern direction from the Circeian Promontory. Anxur was probably its Volscian name. (*Vid. Anxur*.) We learn from Horace (*Sat.*, 1, 5, 25) that this city stood on the lofty rock at the foot of which the modern Terracina is situated. According to Strabo (233), it was first named Trachina, a Greek appellation indicative of the ruggedness of its situation. Ovid calls it Trachas. (*Met.*, 15, 717.) In Dionysius it is written *Tαφρακίνα*. With the generality of Latin writers it is, however, called Tarracina (*Mela*, 2, 4), and sometimes, in the plural, Tarracinae. (*Liv.*, 4, 59.) The Romans took this place after a siege of short duration, when it was given up to plunder. (*Liv.*, l. c.) It was, however, retaken by the Volsci, who surprised the garrison. (*Liv.*, 5, 8.) It subsequently fell again into the hands of the Romans, and became of consequence as a naval station. Its port is noticed by Livy (27, 4), and it is claimed by that historian with those colonies which were required to furnish sailors and stores for the Roman fleet (27, 38). It is styled "*splendidus locus*" by Valerius Maximus, who relates a remarkable trial which took place there (8, 1, 13). From Tacitus we learn that it was a municipium (*Hist.*, 4, 5); and the efforts made by the parties of Vitellius and Vespasian to obtain possession of this place, sufficiently prove that it was then looked upon as a very important post. (*Hist.*, 3, 76, *seqq.*) The Emperor Galba was born at a village near Terracina. (*Cramer's Anc. Italy*, vol. 2, p. 100.)

TERTULLIANUS, J. SEPTIMIUS FLORENS, a celebrated Christian writer, born at Carthage about the middle of the second century, and considered the most early Latin father extant. He was originally a pagan, but afterward embraced Christianity, of which he became an able advocate by his writings, which showed that he was possessed of a lively imagination, impetuous eloquence, elevated style, and strength of reasoning. It is not known at what period of life he became a Christian. He himself informs us that he was originally a pagan, and of corrupt morals; but the latter phrase must necessarily be taken in a mild sense, with reference to one who practised such rigid morality as Tertullian subsequently did. It is probable that before his conversion he taught rhetoric, and followed the profession of an advocate; at least, his works show a great acquaintance with the principles of law. He became bishop of Carthage, or, according to the vulgar opinion, of Rome. He soon, however, separated from the Catholic Church to throw himself into the errors of the Montanists, who, exalting Christian purity, regarded as a sin all participation in the pleasures of the world, all communication with individuals attached to idolatry, and even the study of the sciences of the day. St. Jerome says that the envy and the calumnies of the Roman clergy against Tertullian was the occasion of this step on his part; and from this remark some have concluded, though without sufficient grounds, that he was expelled from the Church of Rome by the intemperate

spirit of his clerical brethren. However this may have been, a distinction is carefully observed between the works which Tertullian wrote previous to his separation from the Catholic Church and those which he composed afterward, when he had ranged himself among the followers of Montanus. The former are four in number, his *Apologeticus*, and those which treat of baptism, of penitence, and prayer. The last of these is regarded as his first production. Some authors add a work in two volumes, addressed to his wife, in which he gives her directions as to the course of conduct which she should pursue in the state of widowhood. Most critics consider this to have been composed by him at an advanced age. The works written by Tertullian after he had become a Montanist are, *Apologies for Christianity*, *Treatises on Ecclesiastical Discipline*, and two species of polemical works, the one directed against heretics, and the other against Catholics. The latter are four in number, *De Pudicitia*, *De Fuga in Persecutione*, *De Jejuniis*, *De Monogamia*. His principal work is the *Apologeticus Adversus Gentes*, mentioned above. It is addressed to the governors of the provinces; it refutes the calumnies which had been uttered against the religion of the gospel, and shows that its professors were faithful and obedient subjects. It is the best work written in favour of Christianity during the early ages of the Church. It contains a number of very curious historical passages on the ceremonies of the Christian Church; as, for example, a description of the *agape* or love-feasts. Tertullian remodelled this work, and it appeared under the new title *Ad Nationes*. In its altered state it possesses more method, but less fire than the first. The writings of Tertullian show an ardent and impassioned spirit, a brilliant imagination, a high degree of natural talent and profound erudition. His style, however, is obscure, though animated, and betrays the foreign extraction of the writer. The perusal of Tertullian is very important for the student of ecclesiastical history. He informs us, more correctly than any other writer, respecting the Christian doctrines of his time, the constitution of the Church, its ceremonies, and the attacks of heretics against Christianity. Tertullian was held in very high esteem by the subsequent fathers of the Church. St. Cyprian read his works incessantly, and used to call him, by way of eminence, *The Master*. Vincent of Lerius used to say "that every word of Tertullian was a sentence, and every sentence a triumph over error." The best edition of the entire works of Tertullian is that of Semler, 4 vols. 8vo, *Hal.*, 1770; and of his *Apology*, that of Havercamp, 8vo, *L. Bat.*, 1718.

TETHYS, the wife of Oceanus, and daughter of Uranus and Terra. Their offspring were the rivers of the earth, and three thousand daughters, named Oceanides or Ocean-nymphs. (*Hex., Theog.* 337, *seqq.*) The name of Tethys (Τηθύς) is thought to mean the Nurse, the *Rearer*. Hermann renders it *Alamnia*. (*Keightley's Mythology*, p. 51.)

TETRAPOLIS, I. a name given to the city of Antioch, the capital of Syria, because divided, as it were, into four cities, each having its separate wall, besides a common one enclosing all. (*Vid.* Antiochia I.)—II. A name applied to Doris, in Greece (*Dorica Tetrapolis*), from its four cities. (*Vid.* Doris.)

TEUCRA, I. a king of part of Troas, son of the Scamander by Idæa. His subjects were called Teucris, from his name; and his daughter Batea married Dardanus, a Samothracian prince, who succeeded him in the government. Dardanus founded the city of the same name, and also gave to the whole adjacent country the name of Dardania. (*Apollod.*, 3, 12, 1.—*Virg.*, *Æn.*, 3, 108.)—II. A son of Telamon, king of Salamis, by Hesione, the daughter of Laomedon. He was one of Helen's suitors, and, accordingly, accompanied the Greeks to the Trojan war, where he sig-

nalized himself by his valour and intrepidity. It is said that his father refused to receive him into his kingdom, because he had left the death of his brother Ajax unavenged. This severity of the father did not dishearten the son; he left Salamis and retired to Cyprus, where, with the assistance of Belus, king of Sidon, he built a town which he called Salamis, after his native country.

TEUCRI, a name given to the Trojans, from Teucer, their king. According to a passage in Virgil (*Æn.*, 3, 108), the Teucris were a colony from Crete, who settled in Troas previous to the founding of Troy, and were the founders of the Trojan race. Apollodorus, however, following, probably, the current Grecian fables on this subject, makes the Teucris to have been descended from Teucris, a son of the Scamander. Heyne, in an *excursus* to the passage of Virgil mentioned above, gives the preference to the latter account. It is probable that the Teucris were only a branch of the inhabitants of Troas, and originally of Thracian descent. Such, at least, is the opinion of Mannert, and with him agrees Cramer (*Asia Minor*, vol. 1, p. 77, *seqq.*).

TEUTA, a queen of Illyricum B.C. 231, who ordered some Roman ambassadors to be put to death. This act of violence gave rise to a war, which ended in her overthrow. (*Vid.* Illyricum.)

TEUTAS or **TEUTITES**, a name of Mercury among the Gauls, who offered human victims to this deity.—He was worshipped by the Britons also. Some derive the name from two British words, *deu-tati*, which signify God, the parent or creator; a name properly due only to the Supreme Being, who was originally intended by that name. (*Lucan.* 1, 445.)

TEUTHRAS, a king of Mysia, on the borders of the Caucasus. (*Vid.* Telephus.)

TEUTOBURGENSIS SALTUS, a forest of Germany, lying in an eastern direction from Paderborn, and reaching as far as the territory of Osnabruck. It is famous for the slaughter of Varus and his three legions, by the Germans under Arminius. (*Tac., Ann.* 1, 60.) For a more particular idea of the locality, consult the remarks of Tappes (*Die wahre Gegend und Linie der Hermannusschlacht, Essen.*, 1820, 8vo.)

TEUTONI and **TEUTONES**, a name given to several united tribes of Germany, who, together with the Cimbri, made a memorable inroad into southern Europe. The most erudite inquiries as to the origin and causes of this migration from the north have led to no definite results, owing to the almost entire ignorance, on the part of the Greeks and Romans, of the nature of the northern population and languages. That the migration was neither purely Scandinavian or German, nor purely Celtic or Gallic, clearly appears from the accounts of the order of march of the Cimbri and Teutones, as well as of their bodily stature and mode of fighting. The barbarian torrent seems to have originally been loosed from the farther side of the Elbe; whence a mongrel horde of Germans and Scandinavians, of gigantic stature, savage valour, and singular accoutrements, descended towards the south. On their route, a number of Celtic tribes, of which the Tigurini and Tectosages are distinguished by name above the others, joined them; and, in conjunction with them, threatened to pour upon the Romans, who just then were pressing farther and farther on the side of what is now *Carinthia* towards modern *Austria*, and on the west from *Provence* towards *Toulouse*. On the side of *Carinthia*, the Romans took the whole of Noricum under their protection; and Carbo was destroyed with his army in endeavouring to keep off the Teutones from that territory. On the other, they had extended their sway from the Alps to the Pyrenees, and had forced the native tribes as far as Lugdunum (*Lyons*) to accept their protection. The barbarians, however, instead of pouring upon Italy after the de-

feat of Carbo, turned back and spread desolation in Gaul; and the Romans despatched an army against them under Spurius Cassius. This army was annihilated by the Celtic hordes, who had associated themselves with the Cimbri and Teutones. The barbarians terrified the Romans by their enormous stature, by their firmness in order of battle, and by their mode of fighting, of which the peculiarity consisted in extending their lines so as to enclose large tracts of ground, and in forming barriers around them with their wagons and chariots. The danger to the Romans from the combined German and Celtic populations seemed the greater, as the Jugurthine war, in the beginning of the contest, engaged their best generals. They therefore sent into Gaul L. Servilius Cæpio, a consul, with a consular army. Cæpio, quite in the spirit of the senatorial party of his times, plundered the Gauls, and seized their sacred treasures instead of preserving discipline. This was in A.U.C. 647. The next year, Cæpio was declared proconsul of Gallia Narbonensis, and Cneius Manlius, the consul, was appointed his colleague. These two generals, neither of whom possessed any merit, happening not to agree, separated their forces, but were both attacked at the same time, one by the Gauls, the other by the Cimbri, and their armies were cut to pieces. The consternation which this occasioned at Rome was increased by the spreading of a report that the enemy were preparing to pass the Alps. But the barbarians, instead of concentrating their force for a descent upon Italy, wasted Spain and scourged the Gallic territories. Marius was now chosen consul; and, while the foe were plundering Spain and Gaul, he was actively employed in exercising and disciplining his army. At length, in the third year of his command in Gaul, in his fourth consulship, the Teutones and Ambrones made their appearance in the south of Gaul; while the Cimbri, and all the tribes united with them, attempted to break into Italy from the northeast. Marius defeated the Teutones and Ambrones near Aquæ Sextis (now *Aix*), in Gaul; and, in the following year, uniting his forces with those of Catulus, he entirely defeated the Cimbri in the plain of Vercellæ, to the north of the Po, near the Sessites. In these two battles the Teutones and Ambrones are said to have lost the incredible number of 290,000 men (200,000 slain, and 90,000 taken prisoners), and the Cimbri 200,000 men (140,000 slain, and 60,000 taken prisoners.—*Liv., Epit.*, 68.—*Vid.* Marius.)

THAIS, a celebrated Greek hetærist, who accompanied Alexander on his expedition into Asia, and instigated him, while under the influence of wine, to set fire to the royal palace at Persepolis. (*Vid.* Persepolis.) After the death of Alexander she attached herself to Ptolemy, son of Lagos, by whom she had two sons and a daughter. This daughter was named Irene, and became the wife of Ennostus, king of Soli, in the island of Cyprus. There is no good reason for the opinion that she lived with the poet Menander before accompanying the army of Alexander. This supposition arose from Menander's having composed a piece entitled *Thais*. (*Athenæus*, 13, p. 576, D.—*Bayle, Dict.*, s. v.—*Michaud, Biogr. Univ.*, vol. 45, p. 230.)

THALA, a city of Africa, in the dominions of Jugurtha. It is supposed by some to be the same with Telepte, now *Ferreeanach*, though this seems doubtful. Mannert, however, inclines to this opinion. (*Consult Shaw's Travels in Barbary*, vol. 1, pt. 2, c. 5.)

THALES, a celebrated philosopher, the founder of the Ionic sect, born at Miletus in the first year of the 35th Olympiad. He was descended from Phœnician parents, who had left their country and settled at Miletus. The wealth which he inherited, and his own superior abilities, raised him to distinction among his countrymen, so that he was early employed in public

affairs. Like the rest of the ancients, he travelled in quest of knowledge, and for some time resided in Crete, Phœnicia, and Egypt. Under the priests of Memphis he is said to have been taught geometry, astronomy, and philosophy. It is probable, however, that he was more indebted to his own ingenuity than to their instructions; for, while he was among them, he taught them, to their great astonishment, how to measure the height of their pyramids. It cannot be supposed that Thales could acquire much mathematical knowledge from a people incapable of solving so easy a problem. The method pursued by Thales was this: at the termination of the shadow of the pyramid, he erected a staff perpendicular to the surface of the earth, and thus obtained two right-angled triangles, which enabled him to infer the ratio of the height of the pyramid to the length of its shadow, from the ratio of the height of the staff to the length of its shadow. In mathematics, Thales is said to have invented several fundamental propositions, which were afterward incorporated into the elements of Euclid, particularly the following theorems: that a circle is bisected by its diameter; that the angles at the base of an isosceles triangle are equal; that the vertical angles of two intersecting lines are equal; that if two angles and one side of one triangle be equal to two angles and one side of another triangle, the remaining angles and sides are respectively equal; and that the angle in a semicircle is a right angle. Astronomical as well as mathematical science seems to have received considerable improvements from Thales. He was so well acquainted with the celestial motions as to be able to predict an eclipse, though probably with no great degree of accuracy as to time; for Herodotus, who relates this fact, only says that he foretold the year in which it would happen. He taught the Greeks the division of the heaven into five zones, and the solstitial and equinoctial points, and approached so near to the knowledge of the true length of the solar revolution, that he corrected their calendar, and made their year contain 365 days.—Thales held that the first principle of natural bodies, or the first simple substance from which all things in the world are formed, is water. It is probable that by the term *water*, Thales meant to express the same idea which the cosmogonists expressed by the word *chaos*, the notion annexed to which was, a turbid and muddy mass, from which all things were produced. His most celebrated pupils and successors in the Ionic school were Anaximander, Anaximenes, Anaxagoras, and Archelaus, the master of Socrates. Thales died at the age of 90, in the 68th Olympiad. (*Sosicr., ap. Diog. Laert.*, 1, 38.—*Clinton, Fast. Hellen.*, vol. 1, p. 3.—*Enfield, Hist. Philos.*, vol. 1, p. 149, *seqq.*)

THALESTRIS, otherwise called MINITHYA (*Justin*, 2, 4), a queen of the Amazons, who, accompanied by 200 women, came 25 days' journey, through the most hostile nations, to meet Alexander, in his Asiatic conquests, and raise offering by him. (*Justin*, 12, 3.—*Quint. Curt.*, 6, 5.)

THALIA (Θάλεια, "the Blooming one"), I. one of the Muses, generally regarded as the patroness of comedy. She was supposed by some, also, to preside over husbandry and planting.—II. One of the Graces. (*Vid.* Gratiæ.)

THAMÏRIS, an early Thracian bard, son of Philammon and Argiope. He is said to have been remarkable for beauty of person and skill on the lyre, and to have challenged the Muses to a contest of skill. He was conquered, and the Muses deprived him of sight for his presumption. (*Apollod.*, 1, 3, 3.)—Consult the remarks of Heyne (*ad Apollod.*, l. c.) on the nature of the stipulation between the contending parties. (*Horn.*, *Il.*, 2, 595, *seqq.*—*Heyne, ad loc.*)

THAPSACUS, a city and famous ford on the Euphrates. The city was situate on the western bank of the

river, nearly opposite to the modern *Racca*. Geographers are wrong in removing it to *Ul-Deer*. (*Williams, Geogr. of Asia*, p. 129, *seqq.*) This ford was passed by Cyrus the Younger in his expedition against Artaxerxes; afterward by Darius after his defeat by Alexander at Issus; and near three years after by Alexander in pursuit of Darius, previous to the battle of Arbela. (*Xen., Anab.*, 1, 4.—*Plin.*, 5, 24.—*Steph. Byz.*, s. v.)

THAPSUA, I. now *Demeas*, a town of Africa Propria, on the coast, southeast of Hadrumetum, where Scipio and Juba were defeated by Cæsar. It was otherwise a place of little consequence. (*Mannert, Geogr.*, vol. 10, pt. 2, p. 241.)—II. A town of Sicily, on the eastern coast, not far to the north of Syracuse. It was situate on a peninsula, which was sometimes called an island, and which now bears the name of *Macronisi*. The place probably obtained its name from the peninsula producing the *θάψος*, a sort of plant or shrub used for dyeing yellow. (*Thucyd.*, 8, 4.—*Bloomfield, ad Thucyd.*, l. c.)

THASUS, an island in the *Ægean*, off the coast of Thrace, and opposite the mouth of the Nestus. It received, at a very remote period, a colony of Phœnicians, under the conduct of Thasus (*Herod.*, 6, 47.—*Scymn., Ch.*, v. 660), that enterprising people having already formed settlements in several islands of the *Ægean*. (*Thucyd.*, 1, 8.) They were induced to possess themselves of Thasus, from the valuable silver-mines which it contained, and which, it appears, they afterward worked with unremitting assiduity. Herodotus, who visited this island, reports that a large mountain on the side of Samothrace had been turned upside down (*ἀνερταπηγυμένον*) in search of the precious metal. Thasus, at a later period, was recolonized by a party of Parians, pursuant to the command of an oracle to the father of the poet Archilochus. From this document, quoted by Stephanus, we learn that the ancient name of the island was *Æria*. (*Pliny*, 4, 12.) It is said by others to have been also named *Chryse*. (*Eustath., ad Dion. Perieg.*, p. 97.) Histæus the Milesian, during the disturbances occasioned by the Ionian revolt, fruitlessly endeavoured to make himself master of this island, which was subsequently conquered by Mardonius, when the Thasians were commanded to pull down their fortifications, and remove their ships to Abdera. (*Herod.*, 6, 44.) On the expulsion of the Persians from Greece, Thasus, together with the other islands on this coast, became tributary to Athens; disputes, however, having arisen between the islanders and that power on the subject of the mines on the Thracian coast, a war ensued, and the Thasians were besieged for three years. On their surrender their fortifications were destroyed, and their ships of war removed to Athens. (*Thucyd.*, 1, 101.) Thasus once more revolted, after the great failure of the Athenians in Sicily, at which time a change was effected in the government of the island from democracy to oligarchy. (*Thucyd.*, 8, 64.) According to Herodotus, the revenues of Thasus amounted to two hundred, and sometimes three hundred, talents annually. These funds were principally derived from the mines of Scapte-hyle, in Thrace (6, 48).—The capital of the island was Thasus.—Thasus furnished, besides gold and silver, marbles and wine, which were much esteemed. (*Plin.*, 35, 6.—*Senec., Epist.*, 86.—*Athen.*, 1, 51.) The soil was excellent. (*Dion. Perieg.*, v. 523.) The modern name of the island is *Thaso* or *Tasso*. (*Cramer's Anc. Greece*, vol. 1, p. 333.)

THAUMACI, a city of Thessaly, in the district of Phthiotis, and in a northwest direction from the head waters of the Sinus Maliacus. It is said to have derived its name from the singularity of its situation, and the *astonishment* (*θαύμα*) produced on the minds of travellers upon first reaching it. Livy, who describes

it as placed on the great road leading from Thermopylæ by Lamia to the north of Thessaly, speaks of it in the following terms: "You arrive," says the historian, "after a very difficult and rugged route over hill and dale, when you suddenly open on an immense plain like a vast sea, which stretches below as far as the eye can reach." The town was situate on a very lofty and perpendicular rock, which rendered it a place of great strength. The modern name is *Thaumacov*. Dodwell describes the view from this place as the most wonderful and extensive he ever beheld. Sir W. Gell gives *Thaumakon* as the modern name. (*Cramer's Anc. Greece*, vol. 1, p. 414.)

THAUMANTIAS, an appellation given to Iris, the goddess of the rainbow, as the daughter of Thaumas (*Wonder*.—*Hes., Theog.*, 265).

THESANO, I. daughter of Cisseus, and sister of Hecuba. She married Antenor, and, being priestess also of Minerva, was prevailed upon by her husband to deliver up to him the Palladium, which he treacherously gave into the hands of the Greeks. (*Hom., Il.*, 6, 298.—*Pausan.*, 10, 27.—*Dict. Cret.*, 5, 8.)—II. The wife of Pythagoras. She was a native of Crotona, and the first female, it is said, that turned her attention to philosophy. She was also a poetess. (*Suid.*, s. v.—*Diog. Laert.*, 8, 43, *seqq.*—*Menag., ad Diog.*, l. c.)—III. A daughter of Pythagoras. (*Auct., Vit. Pythag., ap. Plut.—Menag., ad Diod.*, 8, 42.)—IV. The mother of Pausanias. She was the first, as it is reported, who brought a stone to the entrance of Minerva's temple to shut up her son, when she heard of his perfidy to his country. (*Vid. Pausanias I.*)

THÉATRUM: under this head it is proposed to give a brief sketch of the ancient drama, arranged under proper heads:

1. History of Tragedy from its rise to the time of *Æschylus*.

The drama owes its origin to that principle of imitation which is inherent in human nature. Hence its invention, like that of painting, sculpture, and the other imitative arts, cannot properly be restricted to any one specific age or people. In fact, scenical representations are found among nations so totally separated by situation and circumstances, as to make it impossible for any one to have borrowed the idea from another. In Greece and Hindustan the drama was at the same period in high repute and perfection, while Arabia and Persia, the intervening countries, were utter strangers to this kind of entertainment. The Chinese, again, have from time immemorial possessed a regular theatre. The ancient Peruvians had their tragedies, comedies, and interludes; and even among the savage and solitary islanders of the South Sea, a rude kind of play was observed by the navigators who discovered them. Each of these people must have invented the drama for themselves. The only point of connexion was the sameness of the cause which led to these several independent inventions; the instinctive propensity to imitation, and the pleasure arising from it when successfully exerted.—The elements of the *Grecian Drama* are to be sought in an age far antecedent to all regular historic record. In those remote times, the several seasons of the year had among the Greeks their respective festivals. That religion, which peopled with divinities wood, and hill, and stream, and gave to every art and event of ordinary life its peculiar deity, entered largely into the feelings and customs of these annual festivities. Among an agricultural population like that of early Greece, Dionysus, at what time soever his name and worship had been introduced, as the inventor of wine and god of the vineyard, possessed, of necessity, a distinguished sacrifice and feast.—Music and poetry, wherever they exist, are almost invariably employed in the services of

divine worship. In Greece, pre-eminently the land of the song and the lyre, this practice prevailed from the most ancient times. At the periodic festivals of their several deities, bands of choristers, accompanied by the pipe, the lute, or the harp, sang the general praises of the god, or episodic narrations of his various achievements. The feasts of Bacchus had, of course, their sacred choruses; and these choruses, from the circumstances of the festival, naturally fell into two classes of very different character. The hymns addressed immediately to the divinity, round the hallowed altar during the solemnity of the service, were grave, lofty, and restrained. The songs inspired by the carousals of the banquet, and uttered amid the revelries of the Phallic procession, were coarse, ludicrous, and satirical, interspersed with mutual jest and gibe. The hymn which accompanied the opening sacrifice was called *dithyrambos*, a term of doubtful etymology and import. Perhaps, like the repulsive symbol of the Phallic rites, its origin must be referred to an Eastern clime.—Besides the chanters of the Dithyramb and the singers of the Phallic, there was, probably from the first introduction of Bacchic worship, a third class of performers in these annual festivals. Fauns and Satyrs were, in popular belief, the regular attendants of the deity; and the received character of these singular beings was in admirable harmony with the merry Dionysia. The goat, as an animal especially injurious to the vines, and, therefore, peculiarly obnoxious to the god of the vineyard, was the appropriate offering in the Bacchic sacrifices. In the horns and hide of the victim, all that was requisite to furnish satyric guise was at hand; and thus a band of mummery was easily formed, whose wit, waggy, and grimace would prove no insignificant addition to the amusements of the village carnival.—In these rude festivities the splendid drama of the Greeks found its origin. The lofty poetry of the Dithyramb, combined with the lively exhibition of the Satyric chorus, was at length wrought out into the majestic tragedy of Sophocles. The Phallic song was expanded and improved into the wonderful comedy of Aristophanes.—In the first rise of the Bacchic festivals, the rustic singers used to pour forth their own unpolished and extemporaneous strains. By degrees, these rude choruses assumed a more artificial form. Emulation was excited, and contests between neighbouring districts led to the successive introduction of such improvements as might tend to add interest and effect to the rival exhibitions. It was probably now that a distinction in prizes was made. Heretofore a goat appears to have been the ordinary reward of the victorious choristers; and the term *tragœdia* (*τράγειον ᾠδή*), or *goat-song*, to have comprehended the several choral chantings in the Dionysia. To the Dithyramb a bull was now assigned, as a nobler meed for its sacred ode; the successful singers of the Phallic received a basket of figs and a vessel of wine; while the goat was left to the Satyric chorus. Subsequently, when the Dithyramb and the drama had become established in all their perfection throughout the cities of Greece, the general prize was a tripod, which was commonly dedicated by the victor to Bacchus, with a tablet, bearing the names of the successful composer, choragus, and tribe.—The Dithyramb was at a very early period admitted into the Doric cities, and there cherished with peculiar attention by a succession of poets; among whom Archilochus of Paros, Arion of Methymna, Simonides of Ceos, and Lasus of Hermione were especially distinguished. Under their hands the rude extemporaneous hymn of a peasant chorus was gradually refined into a laboured composition, lofty in sentiment, studied in diction, and adorned with all the graces which music, rhythm, and the dance could supply. Thus fostered by the patronage of city communities, and so improved by the skill and talent of rival poets, the Dithyrambic cho-

rus, in the sublimity of its odes and splendor of the accompaniments, became one of the most imposing shows among the public spectacles of Greece.—In the mean time, the representation of the laughter-loving Satyrs had been moulded into a more regular body, and continued to delight the populace with their grotesque appearance and merry pranks. It is here that we first discover something of a dramatic nature. The singers of the Dithyramb were mere choristers; they assumed no characters, and exhibited no imitation. The performers in the Satyric chorus had a part to sustain; they were actors in the strictest sense of the word. Moreover, in their extemporaneous bursts of description, remark, jest, and repartee, a kind of dialogue was introduced; irregular, no doubt, and wild, yet still a dialogue. Here, then, in this acting and this dialogue, we have, at once, the elements and the essence of the drama.—The Satyric chorus, like the Dithyramb, had found an early entrance into the Doric cities, and was particularly cultivated at Phlius, a town of Sicyon. In Attica, the future scene of the perfected drama, there remains no direct record of these Dionysian representations until the middle of the sixth century before our era. At that time Theopis, a native of Icaria, an Athenian village, was struck with the possibility of introducing various improvements into the Satyric chorus.—He saw that an incessant round of jest, and gambol, and grimace became, in the end, exhausting to the performers and wearisome even to the spectators. Accordingly, the Icarian contrived a break in the representation (*Diog. Laert., Plat., 66*), by coming forward in person (*Plut., Vit. Sol., c. 29*), and, from an elevated stand, describing in gesticulated narration some mythological story. When this was ended the chorus again commenced their performances. The next step was to add life and spirit to these monologues, by making the chorus take part in the narrative through an occasional exclamation, question, or remark. This was readily suggested by the practice of interchanging observations already established among the members of the chorus. And thus was the germ of the dialogue still further developed. In order to disguise his features, and so produce a certain degree of histrionic illusion, Theopis is said first to have smeared his face with vermilion, then with a pigment prepared from the herb purlain, and lastly to have contrived a kind of rude mask made of linen. (*Suid., s. v. Θέοπις*.)—Besides the addition of the actor, Theopis did much for the improvement of the chorus itself. He invented dances, which were handed down through four generations to the time of Aristophanes. (*Vesp., 1470*.) They were, as might be expected from the chorus for which they were devised, of a nature more energetic than graceful. Yet their protracted existence proves them to have possessed popularity and comparative excellence. In these dances he assiduously trained his choristers. Whatever advantages could be derived from the sister art of music were no doubt added, and care extended to the general organization and equipment of the chorus. The metre of his recitative was apparently trochaic; the measure in which, amid frolic and dance, the Satyric chorus gave vent to its ebullitions of joke and merriment. (*Aristot., Poet., 4, 17*.) Indeed, from its formation, the trochee is peculiarly adapted to lively and sportive movements. (*Aristot., Rhet., 3, 7*.) Theopis probably reduced the whole performance into some kind of unity, by causing this intermixture of song and recitative, as a whole, to tend, however loosely, to the setting forth of some one passage in Bacchic history. But the language of both actor and choristers was of a light and ludicrous cast; the subjects of the short episodes were handled in a jocular and humorous manner; and the whole performance, with its dance, song, story, and buffoonery, resembled a wild kind of ballet-farce.—The introduction of an

actor with his episodic recitations was so important an advance, as leading directly to the formation of dramatic plot and dialogue; and the other improvements, which imparted skill, regularity, and unity to the movements of the chorus, were of so influential a description, that Thespis is generally considered the inventor of the drama. Of tragedy, properly so called, he does not appear to have had any idea. Stories, more or less ludicrous, generally turning upon Bacchus and his followers, interwoven with the dance and the song of a well-trained chorus, formed the drama of Thespis.—The Satyric chorus had by this time been admitted into Athens; contests were set on foot; and the success which attended the novelties of Thespis sharpened, no doubt, the talents of his competitors. This emulation would naturally produce improvement upon improvement: but we discover no leading change in the line of the incipient drama until the appearance of Phrynichus, the son of Polyphradmon and the pupil of Thespis. At the close of the sixth century before Christ, the elements of tragedy, though still in a separate state, were individually so fitted and prepared as to require nothing but a master hand to unite them into one whole of life and beauty. The Dithyramb presented in its solemn tone and lofty strains a rich mine of choral poetry; the regular narrative and mimetic character of the Thespian chorus furnished the form and materials of dramatic exhibition. To Phrynichus belongs the chief merit of this combination. Dropping the light and farcical cast of the Thespian drama, and dismissing altogether Bacchus with his satyrs, he sought for the subjects of his pieces in the grave and striking events registered in the mythology or history of his country. This, however, was not a practice altogether original or unexampled. The fact, casually mentioned by Herodotus (5, 67), that the tragic choruses at Sicily sang, not the adventures of Bacchus, but the woes of Adrastus, shows that, in the Cyclic chorus at least, melancholy incident and mortal personages had long before been introduced. There is also some reason for supposing that the young tragedian was deeply indebted to Homer in the formation of his drama. Aristotle distinctly attributes to the author of the Iliad and Odyssey the primary suggestion of tragedy, as in his *Margites* was given the first idea of comedy. (*Poet.*, 4, 12.) Now it is an historical fact, that, a few years before Phrynichus began to exhibit, the Homeric poems had been collected, revised, arranged, and published by the care of Pisistratus. (*Cic., de Orat.*, 3, 34.) Such an event would naturally attract attention, and add a deeper interest to the study of this mighty master; and it is easy to conceive how his *μυθῶνες δραματικαί*, as Aristotle terms them, would strike and operate upon a mind acute, ready, and ingenious, as that of Phrynichus must have been. At any rate, these two facts stand in close chronological connexion—the first edition of Homer, and the birth of tragedy properly so called.—Taking, then, the ode and the tone of the Dithyramb, the mimetic personifications of Homer and the themes which additional tradition or even recent events supplied, Phrynichus combined these several materials together, and so brought them forward under the dramatic form of the Thespian exhibition. Thus, at length, does tragedy dawn upon us.—These changes in the character of the drama necessarily produced corresponding alterations in its form and manner. The recitative was no longer a set of disjointed, rambling episodes of humorous legend, separated by the wild dance and noisy song of a Satyr choir, but a connected succession of serious narrative or grave conversation, with a chorus composed of personages involved in the story, all relating to one subject, and all tending to one result. This recitative again alternated with a series of choral odes, composed in a spirit of deep thought and lofty poetry, themselves turning more or

less directly upon the theme of the interwoven dialogue.—In correspondence with these alterations in tone and composition, the actor and the choristers must have assumed a different aspect. The performers were now the representatives, not of Silenus and the Satyrs, but of heroes, princes, and their attendants. The goatkin guise and obstreperous sportiveness were laid aside for the staid deportment of persons engaged in matters of serious business or deep affliction, and a garb befitting the rank and state of the several individuals employed in the piece. Nor are we to suppose that, as the actor was still but one, so never more than one personage was introduced. For it is very probable that this one actor, changing his dress, appeared in different characters during the course of the play; a device frequently employed in later times, when the increased number of actors made such a contrivance less necessary. This actor sometimes represented female personages; for Phrynichus is stated to have first brought a female character on the stage.—Thus, from the midst of the coarse buffooneries and rude imitations of the Satyric chorus, did tragedy start up at once in her proper, though not her perfect, form. For, mighty as had been the stride towards the establishment of the Serious Drama, yet in the exhibitions of Phrynichus we find the infancy, not the maturity, of tragedy. There was still many an excrescence to be removed; many a chasm to be filled up; many a rugged point to be smoothed into regularity; and many an embryo part to be expanded into its full and legitimate dimensions. The management of the piece was simple and inartificial even to rudeness. The argument was some naked incident, mythologic or historical, on which the chorus sang and the actor recited in a connected but desultory succession. There was no interweaving or development of plot; no studied arrangement of fact and catastrophe; no skilful contrivance to heighten the natural interest of the tale, and work up the feelings of the audience into a climax of terror or of pity. The odes of the chorus were sweet and beautiful; the dances scientific and dexterously given; but then these odes and dances still composed the principal part of the performance. (*Aristot., Probl.*, 19, 31.) They contracted the episodes of the actor, and threw them into comparative insignificance. Nay, not unfrequently, while the actor appeared in a posture of thought, wo, or consternation, the chorus would prolong its dance and chantings, and leave to the performer little more than the part of a speechless image. In short, the drama of Phrynichus was a serious opera of lyric song and skilful dance, and not a tragedy of artful plot and interesting dialogue.—Such was Phrynichus as an *inventor*. Still we must remember, in tracing the *inventive* improvers of tragedy, that the real claims of Phrynichus are not to be measured by what he finally achieved through imitation of others, but by the productions of his own unassisted ingenuity and talent. In this view, those claims must almost entirely be restricted to the combination of the poetry of the Cyclic with the acting of the Thespian chorus; the conversion of Satyric gaiety into the solemnity and pathos of what was thenceforth peculiarly styled *Tragedy*. In all succeeding alterations and additions, Phrynichus seems to have been simply the follower of *Æschylus*.—Between Phrynichus and *Æschylus* two other tragedians, Chorilus and Pratinas, intervened, of whom very little is known. The dramas of Chorilus appear originally to have been of a Satyric character, like those of Thespis. In his later days he naturally copied the improvements of Phrynichus; and we find him, accordingly, contending for the tragic prize against Phrynichus, Pratinas, and *Æschylus*, *Olymp.* 70, B.C. 499; the time when *Æschylus* first exhibited. His pieces are said to have amounted to a hundred and fifty (*Suid., s. v.*); not a fragment, however, remains; and, if we may trust

Hermes and Proclus, the commentators on Plato, the loss is not very great.—Pratinas was a native of Phlius, and a poet of higher talent. He too attempted the new style of dramatic composition, and once obtained a tragic victory. But the manifest pre-eminence of the youthful Æschylus probably deterred the Phliasian from continuing to cultivate the graver form of the art, and led him to contrive a novel and mixed kind of play. Borrowing from tragedy its external form and mythological materials, Pratinas added a chorus of Satyrs, with their lively songs, gestures, and movements. This new composition was called the *Satyrical Drama*. The novelty was exceedingly well-timed. The innovations of Thespis and Phrynichus had banished the Satyrical chorus, with its wild pranks and merriment, to the great displeasure of the commonalty, who retained a strong regret for their old amusement amid the new and more refined exhibitions. The Satyrical drama gave them back, under an improved form, the favourite diversion of former times; and was received with such universal applause, that the tragic poets, in compliance with the humour of their auditors, deemed it advisable to combine this ludicrous exhibition with their graver pieces. One Satyrical drama was added to each tragic trilogy, as long as the custom of contending with a series of plays, and not with single pieces, continued. Æschylus, Sophocles, and Euripides were all distinguished Satyrical composers; and in the *Cyclops* of the latter we possess the only extant specimen of this singular composition. As regards the changes produced by Æschylus in the drama, *vid.* Æschylus.

2. Dramatic Contests.

The precise time at which the contests of the drama commenced is uncertain. The Arundel Marble would make them coeval with the first inventions of Thespis. On the other hand, Plutarch assures us that no scenic contests were established until some years after the early Thespian exhibitions. (*Vit. Sol.*, 29.) The true account appears to be this: The contests of the Dithyrambic and Satyrical choruses were almost contemporaneous with their origin. Those of the Dithyramb continued without interruption to the latest period of theatrical spectacle in ancient Greece: and although the great improvements of Thespis might, for the moment, excite admiration rather than competition, yet doubtless his distinguished success soon stimulated others to attempt this new and popular kind of entertainment, and rival the originator. Under Æschylus and his immediate successors the theatrical contests advanced to a high degree of importance. They were placed under the superintendence of the magistracy; the representations were given with every advantage of stage decoration, and the expenses defrayed as a public concern. These contests were maintained at Athens with more or less splendour and talent for several centuries, long surviving her independence and grandeur.—In accordance with the origin of the drama, its contests were confined to the *Dionysia*, or festivals of Bacchus, the patron deity of scenic entertainments. These festivals were four in number, and occurred in the 6th, 7th, 8th, and 9th months respectively of the Attic year. (*Donaldson, Theatre of the Greeks*, p. 132, and the authorities quoted by him, in *notis.*)—1. The "*Countrv-Dionysia*" (*Tà kar' áypoús Διονύσια*) were held in all the country towns and villages throughout Attica, in Poseideon, the sixth Athenian month, corresponding to the latter part of December and the beginning of January. Aristophanes has left us a picture of this festival in the *Acharnians* (v. 235, &c.). About to offer a sacrifice to Bacchus, Dicaeopolis appears on the stage, with his household marshalled in regular procession. His young daughter carries the sacred basket; a slave bears aloft the mystic symbol of the god; the honest

old countryman himself comes last, chanting the Phallic song, while the wife, stationed upon the house-top, looks on as spectatress. The number of actors is here, of course, limited to one family, as Dicaeopolis had purchased the truce for himself alone. In times of peace and quiet the whole population of the *démos* joined in the solemnities.—2. The "*Festival of the wine-press*" (*tà Aggála*) was held in the month Gamelion, which corresponded to the Ionian month Lenæon, and to part of January and February. It was, like the rural Dionysia, a vintage-festival, but differed from it in being confined to a particular spot in the city of Athens, called the Lenæon, where the first wine-press (*λινός*) was erected.—3. The "*Anthesteria*" (*tà 'Ανθεστήρια*, or *tà tv Διωνας*) were held on the 11th, 12th, and 13th days of the month Anthesterion. This was not a vintage-festival like the other two. The new wine was drawn from the cask on the first day of the feast, which was called *Πιδοίγια*, or "*the Broachings*." It was tasted on the second day, which was called *Χόες*, or "*the drinking-cups*;" while the third day was called *Χέρποι*, on account of the banqueting which went on then. At the *Chœs*, each of the citizens had a separate cup, a custom which arose, according to tradition, from the presence of Orestes at the feast before he had been duly purified (*Müller's Eumeniden*, § 50): it has been thought, however, to refer to a difference of castes among the worshippers at the time of the adoption of the Dionysian rites in the city.—4. The "*Great Dionysia*" (*tà tv δόρει, τὰ kar' ἄστυ, or τὰ δοτικά*) were celebrated between the 8th and 18th of Elaphebolion. (*Æschin., περὶ παραπρεσβ.*, p. 36.) This festival is always to be understood when the Dionysia are mentioned without any qualifying epithet.—At the first, second, and fourth of these festivals, it is known that theatrical exhibitions took place. The exhibitions at the country Dionysia were generally of old pieces. Indeed, there is no instance of a play being acted on those occasions for the first time, at least after the Greek drama had arrived at perfection. At the Lenæa and the great Dionysia, both tragedies and comedies were performed; at the latter, the tragedies at least were always new pieces.—At the time of the greater Dionysia there was always a great concourse of strangers in Athens: deputations bringing the tribute from the several dependant states, visitants from the cities in alliance, and foreigners from all parts of the civilized world: for these *Διονύσια* were the dramatic *Olympia* of Greece. (*Aristoph., Acharn.*, 474.)—We may estimate the importance attached to these scenic exhibitions from the care manifested in providing by public enactment for their due regulation and support. They were placed under the immediate superintendence of the first magistrates in the state: the representations at the *great Dionysia* under that of the chief archon, those at the *Lenæa* under that of him called the king-archon. (*Jul. Pollux*, 8, 89, *seqq.*) To this presiding archon the candidates presented their pieces. He selected the most deserving compositions, and assigned to every poet thus deemed worthy of admission to the contest three actors by lot, together with a chorus. The equipment of these choruses was considered a public concern, and, as such, like the fitting out of triremes and the other *Λειτουργίας*, or *state duties*, was imposed upon the wealthier members of the community. The *ἐπιμεληταί* of each tribe selected one of their body to bear the cost and superintend the training of a chorus. This individual was termed *Χορηγός*, his office *Χορηγία*. The Chorus was considered as the religious representative of the whole people. Hence his person and the ornaments which he procured for the occasion were sacred. (*Demosth. in Mid.*, p. 519.) He was said to do the state's work for it (*Λειτουργεῖν*).—Consult *Valckenauer ad Ammon.*, 2, 16.—*Ruhnck., Epist.*

THEATRUM.

Crit., 1, p. 54.) The Chorus, the Gymnasiarchy, the Feasting of the Tribes, and the Arithmetia, belonged to the class of regularly-recurring state burdens (*ἐγκύκλιοι λειτουργίαι*), to which all persons whose property exceeded three talents were liable. It was the business of the Choragus to provide the chorus in all plays, whether tragic or comic, and also for the lyric choruses of men and boys, Pyrrhichista, Cyelian dancers, and others. His first duty, after collecting his chorus, was to provide and pay a teacher (*χοροδιδάσκαλος*), who instructed them in the songs and dances which they had to perform; and it appears that Choragi drew lots for the first choice of teachers. The Choragus had also to pay the musicians and singers who composed the chorus, and was allowed to press children, if their parents did not give them up of their own accord. He was obliged to lodge and maintain the chorus till the time of performance, and to supply the singers with such aliments as conduce to strengthen the voice. In the laws of Solon, the age prescribed for the Choragus was forty years; but this law does not appear to have been long in force. The relative expense of the different choruses in the time of Lysias is given in a speech of that orator. (*Ἀπολ. δωροδ.*, p. 698.) We learn from this that the tragic chorus cost nearly twice as much as the comic, though neither of the dramatic choruses was so expensive as the chorus of men or the chorus of flute-players. (*Demosth. in Mid.*, p. 565.) No foreigner was allowed to dance in the choruses of the great Dionysia. (*Petit*, p. 353.) If any Choragus was convicted of employing one in his chorus, he was liable to a fine of a thousand drachmæ. This law did not extend to the *Lenææ* (*Petit*, p. 353); there the *Μέτροικοι* also might be Choragi. The rival Choragi were termed *ἀντιχόρηγοι*; the contending dramatic poets, and the composers for the Cyelian or other choruses, *ἀντιδιδάσκαλοι*; the performers, *ἀντίτεχνοι*. (*Alciphron*, 3, 48.)—During one period in the history of the Athenian stage, the tragic candidates were each to produce three serious and one Satyric drama, together entitled a *τετραλογία*; otherwise, omitting the Satyric drama, the three tragedies, taken by themselves, were called a *τριλογία*. The earliest *τετραλογία* on record is that one of Æschylus which contained the *Persæ*, and was exhibited B.C. 472. From that date down to B.C. 415, a space of fifty-seven years, we have frequent notices of tetralogies. In B.C. 415, Euripides represented a tetralogy, one of the dramas in which was the *Tronæes*. After this time it does not appear from any ancient testimony whether the custom was continued or not. Indeed, it is matter of great doubt whether the practice was at any time regular and indispensable. Sometimes, as in the *Oresteiad* of Æschylus, and the *Pandionid* of Philocles, the three tragedies were on a common and connected subject; in general we find the case otherwise. (*Aristoph.*, *Ran.*, 1122.—*Id.*, *Av.*, 280.)—The prize of tragedy was, as has already been noticed, originally a goat; of comedy, a jar of wine and a basket of figs: but of these we have no intimation after the first stage in the history of the drama. In later times the successful poet was simply rewarded with a wreath of ivy. (*Athen.*, 5, p. 217.) His name was also proclaimed before the audience. His Choragus and performers were adorned in like manner. The poet used also, with his actors, to sacrifice the *ἐπιθία*, and provide an entertainment, to which his friends were invited. The victorious Choragus in a tragic contest dedicated a tablet to Bacchus, inscribed with the names of himself, his poet, and the archon. In comedy the Choragus likewise consecrated to the same god the dress and ornaments of his actors. The Choragus who had exhibited the best musical or theatrical entertainment generally received a tripod as a reward or prize. This he was at the expense of consecrating; and in some cases he built the monument

THEATRUM.

on which it was placed. (*Lysias*, *ub. supr.*, p. 202.—*Wordsworth's Athens and Attica*, p. 153, *seqq.*) Thus the beautiful choragic monument of Lysicrates, which is still standing at Athens, was undoubtedly surmounted by a tripod.—The merits of the candidates were decided by judges appointed by lot, and these were generally, but not always, five in number. The archon administered an oath to them, and in the case of the Cyelian choruses, any injustice or partiality was punishable by fine. No prize drama was allowed to be exhibited a second time; but an unsuccessful piece, after being altered and retouched, might be again presented. The plays of Æschylus were exempted by a special decree from this regulation. Afterward (*Aul. Gell.*, 7, 5) the same privilege was extended to those of Sophocles and Euripides; but as the superiority of these great masters was so decided, few candidates could be found to enter the lists against their produced tragedies. A law was consequently passed, forbidding the future exhibition of these three dramatists, and directing that they should be read in public every year.—The whole time of representation was portioned out in equal spaces to the several competitors by means of a clepsydra, and seems to have been dependant upon the number of pieces represented. (*Aristot.*, *Poet.*, 7.) It was the poet's business, therefore, so to limit the length of his play as not to occupy in the acting more than the time allowed. It is impossible now to ascertain the average number of pieces produced at one representation. Perhaps from ten to twelve dramas might be exhibited in the course of the day. (*Donaldson*, *Theatre of the Greeks*, p. 138.)

3. The Theatre.

In the first stage of the art no building was required or provided for its representations. In the country, the Dionysian performances were generally held at some central point, where several roads met; as a rendezvous most easy of access, and convenient in distance to all the neighbourhood. (*Virg.*, *Georg.*, 2, 382.) In the city the public place was the ordinary site of exhibition. But when, at Athens, tragedy began to assume her proper dignity, and dramatic contests were becoming matter of national pride and attention, the need of a suitable building was soon felt. A theatre of wood was erected. (*Photius*, s. v. *Ἱκρία*.) Through the weakness of the material or some defect in the construction, this edifice fell beneath the weight of the crowds assembled to witness a representation, in which Æschylus and Pratinas were rivals. (*Liban.*, *Arg. in Olynth.*, 1.—*Suidas*, s. v. *Πρατίνας*.) It was then that the noble theatre of stone was erected, within the *Ἀθναίων*, or enclosure dedicated to Bacchus. The building was commenced in the year 500 B.C., but not finished till about 381 B.C., when Lycurgus was manager of the treasury. The student who wishes to form an adequate notion of the Greek theatre must not forget that it was only an improvement upon the mode of representation adopted by Thespis, which it resembled in its general features. The two necessary parts were the *θυμίσκη*, or altar of Bacchus, round which the Cyelian chorus danced, and the *λογέον*, or stage, from which the actor or exarchus spoke. It was the representative of the wooden table from which the earliest actor addressed his chorus, and was also called *δκρίβας*. (*Jul. Pollux*, 4, 123.)—To form an accurate conception of the Athenian theatre in all its minutiae, as it stood in the days of Pericles, is now impracticable. The only detailed accounts left us on this subject are two, that of Vitruvius, the architect of Augustus, and that of Julius Pollux, his junior by two centuries. From the descriptions of these writers, aided and explained by incidental hints in other ancient authors, and a reference to the several theatric remains in Greece, Asia Minor, Sicily, and Italy, Genelli, an able scholar and architect

of Berlin, has drawn up a statement, in the main satisfactory. (*Genelli, Das Theater zu Athen, Berlin, 1818.*)—The theatre of Bacchus at Athens stood on the south-eastern side of the eminence crowned by the noble buildings of the Acropolis. From the level of the plain a semicircular excavation gradually ascended up the slope of a hill to a considerable height. Round the concavity, seats for an audience of thirty thousand persons arose range above range; and the whole was topped and enclosed by a lofty portico, adorned with statues and surmounted by a balustraded terrace. The tiers of benches were divided into two or three broad belts, by passages termed *διαζώματα* (called in the Roman theatres *praecinctiones*), and again transversely into wedge-like masses, called *κέρκιδες* (in Latin *cunei*), by several flights of steps, radiating upward from the level below to the portico above. The lower seats, as being the better adapted for hearing and seeing, were considered the most honourable, and therefore appropriated to the high magistrates, the priests, and the senate. This space was named *Βουλευτήριον*. (*Aristoph., Av., 294.—Eq., 669.*) The body of the citizens were probably arranged according to their tribes. The young men sat apart in a division, entitled *Ἐφηβικόν*. The sojourners and strangers had also their places allotted them.—Twelve feet beneath the lowest range of seats lay a level space, partly enclosed by the sweep of the excavation, and partly extending outward right and left in a long parallelogram. This was the *Ὀρχήστρα*. In the middle of this open flat stood a small platform, square and slightly elevated, called *Θυμῆλη*, which served both as an altar for the sacrifices, that preceded the exhibition, and as the central point to which the choral movements were all referred. That part of the orchestra which lay without the concavity of the seats, and ran along on either hand to the boundary wall of the theatre, was called *Δρόμος* (the Roman *Iter*). The wings, as they might be termed, of this *Δρόμος*, were named *Παρόδοι*, and the entrances which led into them through the boundary wall, were entitled *Εισόδοι* (the Roman *Aditus*).—On the side of the orchestra opposite the amphitheatre of benches, and exactly on a level with the lowest range, stood the platform of the *Σκηνή* or stage, in breadth nearly equal to the diameter of the semicircular part of the orchestra, and communicating with the *Δρόμος* by a double flight of steps. The stage was cut breadthwise into two divisions. The one in front, called *Λογεῖον* (the Latin *pulpitum*), was a narrow parallelogram projecting into the orchestra. This was generally the station of the actors when speaking, and therefore was constructed of wood, the better to reverberate the voice. The front and sides of the *Λογεῖον*, twelve feet in height, adorned with columns and statues between them, were called *τὰ ἐπισκήνια*.—The part of the platform behind the *Λογεῖον* was called the *Προσκήνιον*, and was built of stone, in order to support the heavy scenery and decorations, which there were placed. The proscenium was backed and flanked by lofty buildings of stonework, representing externally a palace-like mansion, and containing within, withdrawing-rooms for the actors and receptacles for the stage machinery. In the central edifice were three entrances upon the proscenium, which, by established practice, were made to designate the rank of the characters as they came on; the highly ornamented portal in the middle, with the altar of Apollo on the right, being assigned to royalty, the two side entrances to inferior personages. (*Pollux, 4, 9.*) In a similar way, all the personages who made their appearance by the *Εισόδοι* on the right of the stage, were understood to come from the country; while such as came in from the left were supposed to approach from the town.—On each side of the proscenium and its erections ran the *Παρασκήνια*, high lines of building with architectural front, which contained

spacious passages into the theatre from without, communicating on the one hand with the stage and its contiguous apartments; on the other, through two halls, with the *Παρόδοι* of the orchestra, and with the portico which ran round the topmost range of the seats.—Behind the whole mass of stage buildings was an open space, covered with turf and planted with trees. Around this ran a portico, called the *eumenic*, which was the place of rehearsal for the chorus, and, with the upper portico, afforded a ready shelter to the audience during a sudden storm. There, too, the servants of the wealthier spectators awaited the departure of their masters.—Such was the construction and arrangement of the great Athenian theatre. Its dimensions must have been immense. If, as we are assured, 30,000 persons could be seated on its benches, the length of the *Δρόμος* could not have been less than 400 feet, and a spectator in the central point of the topmost range must have been 300 feet from the actor in the *Λογεῖον*. (*Genelli, p. 52.*)—The scenery of the Athenian stage was doubtless corresponding to the magnificence of the theatre. The catalogue which Julius Pollux has left us bespeaks great variety of devices and much ingenuity of contrivance, although we may not altogether be able to comprehend his obscure descriptions. We may, however, safely conclude that the age and city which witnessed the dramas of a Sophocles, the statues of a Phidias, and the paintings of a Zeuxis, possessed too much taste and too much talent to allow of aught mean and clumsy in the scenery of an exhibition, which national pride, individual wealth, and the sanctity of religion conspired to exalt into the most splendid of solemnities.—The massive buildings of the proscenium were well adapted for the generality of tragic dramas, where the chief characters were usually princes, and the front of their palace the place of action. But not unfrequently the locality of the play was very different. Out of the seven extant pieces of Sophocles, there are but four which could be performed without a change of proscenium. The *Oedipus Coloneus* requires a grove, the *Ajax* a camp, and the *Philoctetes* an island solitude. In comedy, which was exhibited on the same stage, the necessity of alteration was still more common. To produce the requisite transformations various means were employed. Decorations were introduced before the proscenic buildings, which masked them from the view, and substituted a prospect suitable to the play. These decorations were formed of woodwork below; above were paintings on canvases, resembling our scenes, and, like them, so arranged on perspective principles as to produce the proper illusion. (*Pollux, 4, 19.*) No expense or skill seems to have been spared in the preparation of these scenic representations; nay, it is not improbable that even living trees were occasionally introduced, to produce the better effect. The stage-machinery appears to have comprehended all that modern ingenuity has devised. As the intercourse between earth and heaven is very frequent in the mythologic dramas of the Greeks, the number of aerial contrivances was proportionably great. Were the deities to be shown in converse aloft! there was the *Θεολογεῖον*, a platform surrounded and concealed by clouds. Were gods or heroes to be seen passing through the void of the sky, there were the *Ἀλυσαι*, a set of ropes, which, suspended from the upper part of the proscenic building, served to support and convey the celestial being along.—The *Μηχανή*, again, was a sort of crane turning on a pivot, with a suspender attached, placed on the right, or country side of the stage, and employed suddenly to dart out a god or hero before the eyes of the spectators, and there keep him hovering in air till his part was performed, and then as suddenly withdraw him. The *Τέφανος* (*Pollux, 4, 19*) was something of the same sort, with a grapple hanging from it, used to catch up persons from the

earth, and rapidly whirl them within the circle of æthereal clouds; Aurora was thus made to carry off the dead body of her son Memnon.—There was, moreover, the *Βρονταίον*, a contrivance in the *Υποσκήνιον*, or room beneath the *Δοχείον*, where bladders full of pebbles were rolled over sheets of copper, to produce a noise like the rumbling of thunder. The *Κεραυνόσκορτεον* was a place on the top of the stage buildings, whence the artificial lightning was made to play through the clouds, which concealed the operator.—When the action was simply on earth, there were certain pieces of framework, the *Σκαῖς*, *Τείχος*, *Πύργος*, and *Φρουράριον*, representing, as their names import, a lookout, a fortress-wall, a tower, and a beacon. These were either set apart from the stationary erections of the proscenium, or connected so as to give them, with the assistance of the canvass scene, the proper aspect. Here a sentinel was introduced, or a spectator, supposed to be viewing some distant object. The *Ἡμικύκλιον* was a semicircular machine, placed, when wanted, on the country side of the stage, which enclosed a representation of the sea or a city in the distance, towards which the eye looked through a passage between cliffs or an opening among trees. What the *Στροφέον* and *Ἡμετροπέδιον* were, it is difficult to make out. It would seem that they were constructed something like the *Ἡμικύκλιον*, but moved on a pivot, so that, by a sudden whirl, the object they presented might be shown or withdrawn in an instant. They were employed to exhibit heroes transported to the company of deities, and men perishing in the waves of the sea or the tumult of battle.—In some cases one or more stories of the front wall in a temporary house were made to turn upon hinges, so that when this front was drawn back, the interior of a room could be wheeled out and exposed to view, as in the *Acharnians*, where Euripides is so brought forward. This contrivance was called *Ἐκκύλημα*. (*Pollux*, 4, 19.)—Such were some of the devices for the scenes of heaven and earth; but as the ancient dramatists fetched their personages not unfrequently from Tartarus, other provisions were required for their due appearance.—Beneath the lowest range of seats, under the stairs, which led up to them from the orchestra, was fixed a door, which opened into the orchestra from a vault beneath it by a flight of steps called *Χαρόνιοι αὐλῆμακες*. Through this passage entered and disappeared the shades of the departed. Somewhat in front of this door and steps was another communication by a trap-door with the vault below, called *Ἀνεπίσκημα*; by means of which, any sudden appearance, like that of the Furies, was effected. A second *Ἀνεπίσκημα* was contained in the floor of the *Δοχείον* on the right or country side, whence particularly marine or river-gods ascended, when occasion required.—In tragedy the scene was rarely changed. In comedy, however, this was frequently done. To conceal the stage during this operation, a curtain, called *σάλας*, wound round a roller beneath the floor, was drawn up through a slit between the *Δοχείον* and proscenium.

4. Audience.

Originally no admission money was demanded. (*Heysch.*, *Suid.* et *Harpoer.*, s. v. *Θεατρίον*.—*Liban.*, *Arg. in Olynth.*, 1.) The theatre was built at the public expense, and, therefore, was open to every individual. The consequent crowding and quarrelling for places among so vast a multitude was the cause of a law being passed, which fixed the entrance price at one drachma each person. This regulation, debarring, as it did, the poorer classes from their favourite entertainment, was too unpopular to continue long unrepented. Pericles, anxious to ingratiate himself with the commonalty, brought in a decree which enacted that the price should be reduced to two oboli; and, farther, that one of the magistrates should furnish out

of the public funds these two oboli to any one who might choose to apply for it, provided his name was registered in the book of the citizens (*ἀγχιπαρῶν γραμματεῖον*). The entrance-money was paid to the lessee of the theatre (*θεατρίωνος, θεατροκύβητος, or ἀρχιτέκτων*), who paid the rent, and made the necessary repairs out of the proceeds. The sum obtained for this purpose from the public funds was drawn from the contributions originally paid by the allies towards carrying on war against the Persians. By degrees, the expenses of the festivals engrossed the whole of this fund; and that money, which ought to have been employed in supporting a military force for the common defence of Greece, was scandalously lavished away upon the idle pleasure of the Athenian people. This measure proved most ruinous to the republic; yet so jealous were the multitude of any infringement upon their *theoric* expenses, that, when an orator had ventured to propose the restoration of the same then squandered upon spectacles foreign to their original purpose, a decree was instantly framed, making it death to offer any such scheme to the general assembly. Demosthenes twice cautiously endeavoured to convince the people of their folly and injustice; but, finding his exhortations were ill-received, he was constrained reluctantly to acquiesce in the common resolution.—The lessee sometimes gave a gratuitous exhibition, in which case tickets of admission were distributed. (*Theophrast.*, *Charact.*, 11.) Any citizen might buy tickets for a stranger residing at Athens. (*Theophrast.*, *Charact.*, 9.) We have no doubt that women were admitted to the dramatic exhibitions. Julius Pollux uses the term *θεατρία* (2, 56; 4, 131), which is alone some evidence of the fact. It is stated, however, expressly by Plato (*Gorgias*, p. 502, D.—*Lag.*, 2, p. 658, D.—*Id.*, 7, p. 817, C.) and by Aristophanes (*Eccles.*, 21, *sqq.*).—The spectators hastened to the theatre at the dawn of day to secure the best places, as the performances commenced very early. After the first exhibition was over, the audience retired for a while, until the second was about to commence. There were three or four such representations in the course of the day, thus separated by short intervals. During the performance the people regaled themselves with wine and sweetmeats. The number of spectators in the Athenian theatre amounted occasionally to thirty thousand. (*Plato*, *Symp.*, p. 13.) This immense assembly were wont to express in no gentle terms their opinion of the piece and actors. Murmurs, jeers, hissings, and angry cries were directed in turn against the offending performer. They not unfrequently proceeded still farther; sometimes compelling the unfortunate object of their dissatisfaction to pull off his mask and expose his face, that they might enjoy his disgrace; sometimes, assailing him with every species of missile at hand, they drove him from the stage, and ordered the herald to summon another actor to supply his place, who, if not in readiness, was liable to a fine. In the time of Machon it was even customary to pelt a bad performer with stones. (*Athenæus*, 6, p. 245.) On the other hand, where the impetuous spectators happened to be gratified, the clapping of hands and shouts of applause were as loud as the expression of their displeasure. In much the same manner the dramatic candidates themselves were treated.

5. Actors.

In the origin of the drama the members of the chorus were the only performers. Theopis first introduced an actor distinct from that body. *Æschylus* added a second, and *Sophocles* a third actor; and this continued ever after to be the legitimate number. Hence, when three characters happened to be already on the stage, and a fourth was to come on, one of the three was obliged to retire, change his dress, and so

return as the fourth personage. The poet, however, might introduce any number of *mates*, as guards, attendants, &c. The actors were called *ὑποκριταί* or *ἀγωνισταί*. *ὑποκρίνεσθαι* was originally to answer (*Herodot.*, 1, 78, et passim); hence, when a locutor was introduced who answered the chorus, he was called *ὁ ὑποκριτής*, or the answerer; a name which descended to the more numerous and refined actors in after days. Subsequently *ὑποκριτής*, from its being the name of a performer assuming a feigned character on the stage, came to signify a man who assumes a feigned character in his intercourse with others, a hypocrite.—The three actors were termed *πρωταγωνιστής*, *δευτεραγωνιστής*, *τριταγωνιστής*, respectively, according as each performed the principal or one of the two inferior characters. They took every pains to attain perfection in their art: to acquire muscular energy and pliancy they frequented the palaestra, and to give strength and clearness to their voice they observed a rigid diet. An eminent performer was eagerly sought after and liberally rewarded. The celebrated Polus would sometimes gain a talent (or nearly \$1060) in the course of two days. The other states of Greece were always anxious to secure the best Attic performers for their own festivals. They engaged them long beforehand, and the agreement was generally accompanied by a stipulation, that the actor, in case he failed to fulfil the contract, should pay a certain sum. The Athenian government, on the other hand, punished their performers with a heavy fine if they absented themselves during the city's festivals. Eminence in the histrionic profession seems to have been held in considerable estimation in Athens at least. Players were not unfrequently sent, as the representatives of the republic, on embassies and deputations. Hence they became in old, as not unfrequently in modern times, self-conceited and domineering, *μεῖζον δύνανται*, says Aristotle, *τῶν ποιητῶν οἱ ὑποκριταί*. (*Rhet.*, 3, 1.) They were, however, as a body, men of loose and dissipated character, and, as such, were regarded with an unfavourable eye by the moralists and philosophers of that age.

6. Chorus.

The chorus, once the sole matter of exhibition, though successively diminished by Thespis and Æschylus, was yet a very essential part of the drama during the best days of the Greek theatre. The splendour of the dresses, the music, the dancing, combined with the loftiest poetry, formed a *spectacle* peculiarly gratifying to the eye, ear, and intellect of an Attic audience. The number of the tragic chorus for the whole trilogy appears to have been 50; the comic chorus consisted of 24. The chorus of the tetralogy was broken into four sub-choruses, two of 15, one of 12, and a Satyric chorus of 8. When the chorus of 15 entered in ranks three abreast, it was said to be divided *κατὰ ζυγά*; when it was distributed into three files of five, it was said to be *κατὰ στήλους*. The situation assigned to the chorus was the orchestra, whence it always took a part in the action of the drama, joining in the dialogue through the medium of its *χορηγός*, or leader. The choristers entered the orchestra preceded by a player on the flute, who regulated their steps, sometimes in single file, more frequently three in front and five in depth (*κατὰ στήλους*), or vice versa (*κατὰ ζυγά*), in tragedy; and four in front by six in depth, or inversely, in comedy. Its first entrance was called *παρόδος*; its occasional departure, *μετανάστασις*; its return, *ἐπισπάροδος*; its final exit, *δρόδος*. (*Jul. Pol.*, 4, 15.) According to the rules of the drama, the chorus was to be considered as one of the actors: *καὶ τὸν χορὸν δὲ ἕνα δεῖ ὑπολαβεῖν τῶν ὑποκριτῶν καὶ μέρων εἶναι τοῦ ὅλου, καὶ συναγωνίζεσθαι*. (*Aristotle, Poëtica*, 18, 21.) Horace lays down the same law in describing

the duties of the chorus (*Ep. ad Pis.*, 198.) Sometimes, again, the chorus was divided into two groups, each with a corymbus stationed in the centre, who narrated some event, or communicated their plan, their fears, or their hopes; and sometimes, on critical occasions, several members, in short sentences, gave vent to their feelings. Between the acts, the chorus poured forth hymns of supplication or thanksgiving to the gods, didactic odes upon the misfortunes of life, the instability of human affairs, and the excellence of virtue, or dirges upon the unhappy fate of some unfortunate personage; the whole more or less interwoven with the course of action. While engaged in singing these choral strains to the accompaniment of flutes, the performers were also moving through dances in accordance with the measure of the music; passing, during the *strophe*, across the orchestra, from right to left; during the *antistrophe*, back, from left to right; and stopping, at the *epode*, in front of the spectators. Each department of the drama had a peculiar style of dance suited to its character. That of tragedy was called *ἑυκλήσια*; that of comedy, *κόπδα*; that of the Satyric drama, *οἰκτιννίς*.—The music of the chorus was of a varied kind, according to the nature of the occasion or the taste of the poet. The Doric mood seems to have been originally preferred for tragedy (*Athenæus*, 14, p. 624); it was sometimes combined with the Mixo-Lydian (*Plut., de Mus.*, p. 1136), a pathetic mood, and therefore adapted to mournful subjects. The Ionic mood, also, was, from its austere and elevated character, well suited to tragedy. (*Athen.*, 14, p. 625.) Sophocles was the first who set choral odes to the Phrygian mood. Euripides introduced the innovations of Timotheus, for which he is severely attacked by Aristophanes in the *Rana*.—The choruses were all trained with the greatest care during a length of time before the day of contest arrived. Each tribe felt intensely interested in the success of the one furnished by its Chorus; and the Ghoragi themselves, animated with all the energies of rivalry, spared no expense in the instruction and equipment of their respective choruses. They engaged the most celebrated choral performers, employed the ablest *χοροδιδάσκαλοι* to perfect the choristers in their music and dancing, and provided sumptuous dresses and ornaments for their decoration. The first tragic poets were their own *χοροδιδάσκαλοι*. Æschylus taught his chorus figure-dances.

7. Scenic Dresses and Ornaments

In the first age of the drama, the rude performers disguised their faces with wine-leaf, or a species of pigment called *βαρπαρχεῖον*. (*Schol. ad Aristoph., Eq.*, 320.) Æschylus, among his many improvements, introduced the mask, first termed *πρόσωπον*, and subsequently *προσωπεῖον*. The mask was made of bronze or copper, and was so constructed as to give greater power to the voice, and enable the actor to make himself heard by the most distant spectators. This was effected by connecting it with a tire or periwig (*πηνίκη, φενάκη*), which covered the head, and left only one passage for the voice, which was generally circular, converging inward, and from its shape, and its being lined with brass, resembled the opening of a speaking trumpet. The voice, therefore, might be said to sound through this opening, and hence the Latin name for a mask, *persona, a personando*. (*Aul. Gell.*, 5, 7.) These masks were of various kinds, to express every age, sex, country, condition, and complexion; to which they were assimilated with the greatest skill and nicety. (*Jul. Poll.*, 4, 133.) With equal care, the dresses of the actors were adapted to the characters represented. Gods, heroes, satyrs, kings, soothsayers, soldiers, hunters, peasants, slaves, pimps, and parasites, young and old, the prosperous and the unfortunate, were all arrayed in their appropri-

ate vestments; each of which Julius Pollux has separately and minutely described in a chapter devoted to the subject. This writer divides the tragic masks alone into twenty-six classes (4, 133, *seqq.*). The comic masks were much more numerous. He specifies only four or five kinds of Satyric masks. Most of the male wigs were collected into a foretop (*δγκος*), which was an angular projection above the forehead, shaped like a Δ , and was probably borrowed from the *κροβύλον* of the old Athenians. (*Jul. Poll.*, 4, 133. — *Thucyd.*, 1, 6.) The female masks, however, were often surmounted in a similar manner. The object of this projection was to give the actor a height proportioned to the size of the theatre, an object for which the *cothurnus* was also intended. It appears from Pollux (4, 141) that the masks were coloured; and the art of enamelling or painting bronze seems to have been one of great esteem in the time of Æschylus. (*Æschyl.*, *Agam.*, 623. — *Welcker, Nachtrag.*, p. 42.) — Another peculiarity which distinguished the Greek manner of acting from our own, was the probable neglect of everything like *by-play* and *making points*, which are so effective on the modern stage. The distance at which the spectators were placed would prevent them from seeing those little movements, and hearing those low tones, which have made the fortune of many a modern actor. The mask, too, precluded all attempts at varied expression; and it is probable that nothing more was expected from the performer than good recitation. — The buskin, or *cothurnus* (*κόθορνος*), was the ancient Ætolic hunting boot. For tragic use it was soled with several layers of cork, to the thickness of three inches. It was laced up in front as high as the calf, which kept the whole tight and firm, in spite of the enormous sole. — It was not worn by all tragic characters, nor on all occasions. Agamemnon is introduced by Æschylus in sandals. The sandal raised by a cork sole was called *ἐμβαρίς*. The ladies and the chorus had also the buskin, but that of the latter had only an ordinary sole. These buskins were of various colours. White was commonly the colour for ladies, red for warriors. Those of Bacchus were purple. Slaves wore the low shoe called the sock, which was also the ordinary covering for the foot of the comic actor. — As the cork sole of the *cothurnus* gave elevation to the stature, so the *κόλπωμα*, or stuffings, swelled out the person to heroic dimensions. Judiciously managed, it added expansion to the chest and shoulders, muscular fulness to arm and limb. — The dresses were very various. There was the *χιτών ποδηρίς* for gods, heroes, and old men. That for hunters, travellers, and young nobles and warriors when unarmed, was shorter, and sat close to the neck. The girdle for heroes was that called the Persian. It was very broad, made of scarlet stuff, and fringed at the lower edge. Goddesses and ladies wore one broad and plain, of purple and gold. The *σώμα* was a long purple robe for queens and princesses, with a train which swept the ground. The lower part of the sleeve was brodered with white. — The *Χούτιον* was a short train with short sleeves drawn over the *χιτών ποδηρίς*. Slaves wore the *ἱμάτιον*, a kind of short shirt, or the *ἐξώμης*, a shirt with only one sleeve for the right arm; the left was bare to the shoulder. Herdsmen and shepherds were clad in the *διφθέρα*, a kind of goat-skin tunic without sleeves. Hunters had the *ἱμάτιον*, and a short horseman's cloak of a dark colour. If they were great personages, they were dressed in a tunic of deep scarlet, with a rich and embroidered mantle. Warriors were arrayed in every variety of armour, with helmets adorned with plumes. The palla or mantle for heroes was ample enough to cover the whole person. So large, also, was the ladies' *Πέπλον*, of fine cloth, embroidered. Matrons wore this peplum fastened veil-like on the head; virgins, clasped on the shoulder. The peplum of a queen was like

that assigned to Juno, decked with golden stars and fastened behind the diadem. The dress of the gods was particularly splendid. Bacchus, for instance, was represented in a saffron-coloured inner vest, rich with purple figures and glittering with golden stars, and falling in many folds to the ground. The vest was girt, female fashion, high up under the breast and shoulders, with a broad girdle of dark purple set with gold and jewels. Over this inner robe was thrown the palla, of purple also, and such was the colour of his buskins. The comic dresses were, of course, chiefly those of ordinary life, except during an occasional burlesque upon the tragic equipment. (*Theatre of the Greeks*, p. 1, *seqq.*, 3d ed. — *Donaldson, Theatre of the Greeks*, p. 132, *seqq.*)

THEBÆ (*-arum*), I. (or, more correctly, Thebe, *Θήβη*), a city of Mysia, north of Adramyttium, and called, for distinction's sake, Hypoplakia. This name it received from the adjacent district, which was styled Hypoplakia, because lying at the foot of Mount Plakos (*ὄρος* and *Πλάκος*). As regards the existence, however, of such a mountain, some doubt exists. (Compare *Heyne, ad Il.*, 6, 396.) Thebe is said to have derived its name from a daughter of Cilix. (*Diod. Sic.*, 5, 49.) It was the native city of Andromache, and was taken and destroyed by Achilles during the Trojan war. It never rose from its ruins; but the name remained throughout antiquity attached to the surrounding plains, famed for their fertility, and often ravaged and plundered by the different armies whom the events of war brought into this part of Asia. (*Xen., Anab.*, 7, 8, 4. — *Polyb.*, 16, 1, 7. — *Id.*, 21, 8, 13. — *Leo*, 37, 19. — *Pomp. Mel.*, 1, 18.) — II. (and Thebe, *Θήβαι* and *Θήβη*, more frequently the former), one of the most ancient and celebrated of the Grecian cities, the capital of Bœotia, situated near the river Iamenes, and in a northeastern direction from Plataeæ. It was said to have been originally founded by Cadmus, who gave it the name of Cadmeia, which in after times was confined to the citadel only. Lycophron, however, who terms it the city of Calydmæ, from one of its ancient kings, leads us to suppose that it already existed before the time of Cadmus (v. 1209). Nonnus affirms that Cadmus called this city Thebes, after the Egyptian one of the same name. (*Dionys.*, 5, 85.) He also reports that it was at first destitute of walls and ramparts (5, 50), and this is in unison with the accounts transmitted to us by Homer and other writers, who all agree in ascribing the erection of the walls of the city to Amphion and Zethus. (*Hom., Od.*, 11, 262. — *Eurip., Phœn.*, 842. — *Hom., Hymn in Apol.*, 325.) — Having already mentioned much of what is common to Thebes, in the general history of Bœotia, it will be here sufficient to notice briefly those events which have peculiar reference to that city. — Besieged by the Argive chiefs, the allies of Polynices, the Thebans successfully resisted their attacks, and finally obtained a signal victory; but the Epigoni, or descendants of the seven warriors, having raised an army to avenge the defeat and death of their fathers, the city was on this occasion taken by assault and sacked. (*Pausan.*, 9, 9.) It was invested a third time by the Grecian army under Pausanias, after the battle of Plataeæ; but, on the surrender of those who had proved themselves most zealous partisans of the Persians, the siege was raised, and the confederates withdrew from the Theban territory. (*Herod.*, 9, 88.) Many years after, the Cadmeia was surprised, and held by a division of Lacedæmonian troops until they were compelled to evacuate the place by Pelopidæ and his associates. — Philip having defeated the Thebans at Chæronea, placed a garrison in their citadel; but, on the accession of Alexander, they revolted against that prince, who stormed their city, and razed it to the ground, B.C. 335. (*Arrian, Esp. Alex.*, 1, 7, *seqq.* — *Plut., Vit. Alex.*, 5, 11.) Twenty years afterward it was restored by

Cassander, when the Athenians are said to have generously contributed their aid in rebuilding the walls, an example which was followed by other places. (*Pausan.*, 2, 7.—*Plut.*, *Polit. Præcep.*, p. 814, B.) Subsequently we find that Thebes was twice taken by Demetrius Poliorcetes. (*Plut.*, *Vit. Demetr.*, c. 89.) Dicaearchus has given a very detailed and interesting account of this great city about this period. (*Stat.*, *Gr.*, p. 14.) At a later period Thebes was greatly reduced and impoverished by the rapacious Sylla. (*Pausan.*, 9, 7.) Strabo affirms, that in his time it was little more than a village. (*Strab.*, 403.) Thebes, though nearly deserted towards the decline of the Roman empire, appears to have been of some note in the middle ages (*Nicet.*, *Ann.*, 2, p. 50.—*Leunc.*, *Ann.*, p. 267), and it is still one of the most populous towns of northern Greece. The natives call it *Thive*. It retains, however, according to Dodwell, scarcely any traces of its former magnificence. Of the walls of the Cadmeia a few fragments remain, which are regularly constructed. These were probably erected by the Athenians when Cassander restored the town. (*Tour.*, vol. 1, p. 264.—*Cramer's Anc. Greece*, vol. 2, p. 323, seqq.)—III. Phthioticæ, a city of Thessaly, in the district of Phthiotis, situate, according to Polybius, about 300 stadia from Larissa, and not far from the sea. In a military point of view its importance was great, as it commanded the avenues of Magnæsis and Thessaly, from its vicinity to Demetrius, Phææ, and Pharsalus. Sir W. Gell describes some ruins between *Armiro* and *Volæ*, which he suspects to be those of this town. (*Itin.*, p. 258.—*Cramer's Anc. Greece*, vol. 1, p. 402.)—IV. A celebrated city of Upper Egypt, the capital of Thebais. The name is corrupted from the *Tēpē* of the Coptic, which, in the Memphitic dialect of that language, is pronounced Theba. Pliny in one place writes the name of Thebes in the singular: "*Thebe portarum centum nobilis fama*" (5, 9). The appellation of Diospolis, often applied to it by the Greeks, is a translation of *Amūnet*, or "the abode of Ammon," who represents the Egyptian Jupiter. Another name given to it by the Greeks was Hecatompylos, which will be considered below. The origin of this great city is lost amid the obscurity of fable. By some it was ascribed to Osiris, by others to one of the earliest of the Egyptian kings. The probability is, that it was at first a sacerdotal establishment, connected with commercial operations, like so many of the early cities of Egypt, and that it gradually attained to its vast dimensions in consequence of the additions made by successive monarchs. The Egyptians, however, according to Diodorus (1, 50), believed Thebes to have been the first city founded upon the earth; and, in truth, we have no account at the present day of any of earlier origin. Its most flourishing period appears to have been prior to the building of Memphis, when Thebes was the capital of all Egypt, the royal residence, and abode of the highest sacerdotal college in the land. It must, from its very situation, have been the middle point for the caravan trade to the south, and through it passed, very probably, all the productions and wares of Asia. Homer, therefore, who describes it as a powerful city, containing a hundred gates, must have derived his information from the Phœnicians engaged in the overland trade. It is idle to suppose that the poet himself had been there in person, when of the rest of Egypt he knew nothing but the mere name, and had but a confused idea even of the Mediterranean coast. The poet informs us that out of each these 100 gates, Thebes could send forth 300 chariots to oppose an enemy: an evident exaggeration, either originating in his own fancy, or received from, and characteristic of, the Phœnician traders. It is to the numerous portals that the epithet of *Hecatompylos* ("hundred-gated") refers. As the city, however, contrary to the usual belief, was never surrounded

by walls, these gates or portals must either be those of its numerous palaces, or else, and what is more probable, the openings in the great circus or hippodrome, that was in the neighbourhood of the city. This circus enclosed a space of 2000 metres in length and 1000 in breadth, and was surrounded with triumphal structures that gloriously announced the approach to the ancient capital of Egypt. Thebes sank in importance when Lower Egypt began to be more thickly inhabited, and the new capital Memphis arose. A second and a third sacerdotal college were established in the same quarter; hither, too, trade and commercial intercourse of all kinds directed their course, and Thebes, in consequence, became almost a deserted city compared with its former splendour. It still remained, however, the chief seat of the religion of Egypt; a circumstance which enabled it to retain a tolerable population, until the fury of Cambyses, or, more correctly speaking, his religious fanaticism, destroyed most of its priesthood, and overthrew its proudest structures. From this period it rapidly declined. Herodotus visited the city during the Persian government of Egypt, and speaks of the temple of Zeus; but his silence respecting the condition of the rest of the city must always remain an enigma. Diodorus, who speaks of Thebes as of a city already in ruins, takes particular notice of four principal temples. He mentions sphinxes, colossal figures decorating the entrances, porticoes, pyramidal gateways, and stones of astonishing magnitude which entered into their structures. In the descriptions given by modern travellers, these monuments are still recognised. Browne tells us that "there remain four immense temples, yet not so magnificent nor in so good a state of preservation as those of Denderah." Norden remarks, "It is surprising how well the gilding, the ultra-marine, and various other colours still preserve their brilliancy." He speaks also of a colonnade, of which thirty-two columns are still standing; of platforms, preserved galleries, and other remains of antiquity, which he has represented in his plates, and which he thinks the more worthy of attention as they appear to be the same that are mentioned by Philostratus in his account of the temple of Memnon. No description can give an adequate idea of these wonders of antiquity, both in regard to their incredible number and their gigantic size. Their form, proportions, and construction are almost as astonishing as their magnitude. The mind is lost in a mass of colossal objects, every one of which is more than sufficient to absorb its whole attention. On the western side of the river stood the famed Memnonium; here also are numberless tombs in the form of subterranean excavations, and containing many human bodies in the state of mummies, sometimes accompanied with pieces of papyrus and other ancient curiosities. These have been the subject of ardent research; and the trade of digging for tombs and mummies being found gainful, has been resorted to by numerous Arabs belonging to the place. With respect to the mummies, some are found in wooden cases shaped like the human body. These belonged to persons superior to the lower rank, but differing from one another in the quantity and quality of the linen in which the body had been wrapped. The mummies of the poorest classes are found without any wooden covering, and wrapped in the coarsest linen. These differ from the former also in being often accompanied with pieces of papyrus, on which Belzoni supposes that an account of the lives of the deceased had been written, while a similar account was carved on the cases of the more opulent. These cases are generally of Egyptian sycamore, but very different from one another with respect to plainness or ornament. Sometimes there are one or two inner cases besides the outer one. Leaves and flowers of acacia are often found round the body, and sometimes

lumps of asphaltum about two pounds in weight. The case is covered with a cement resembling plaster of Paris, in which various figures are cast. The whole is painted, generally with a yellow ground, on which are hieroglyphics and figures of green.—But to return to the ruin of Thebes: on the east side of the Nile, at *Karnac* and *Luxor*, amid a multitude of temples, there are no tombs; these are confined to the west bank. An iron sickle was lately found under one of the buried statues, nearly of the shape of those which are now in use, though thicker; it is supposed to have lain there since the invasion of Cambyzes, when the idols were concealed by the superstitious to save them from destruction. Belzoni and others uncovered and carried away many specimens of these antique remains, such as sphinxes, obelisks, and statues. On this same side of the river, no palaces or traces of ancient human habitations are met with; whereas, on the western side, at *Medinet Abou*, there are not only propylæa and temples highly valued by the antiquarian, but dwelling-houses, which seem to point out that place as having been once a royal residence. (*Mannert, Geogr.*, vol. 10, pt. 1, p. 334, *seqq.*—*Wilkinson, Topography of Thebes, London, 1835*, &c.)

THEBÆ, I. the southernmost division of Egypt, of which Thebes was the capital. (*Vid. Egyptus*, page 37, col. 1, § 4.)—II. The title of a poem by Statius. (*Vid. Statius*.)

THEBÆ. *Vid. Thebæ*.

THEBÆ, the wife of Alexander, tyrant of Phœn. She assassinated him. (*Vid. Alexander I.*, page 109, col. 2, § 6.)

THEMIS, the goddess of Justice or Law. This deity appears in the *Iliad* among the inhabitants of Olympus (*Il.*, 15, 87.—*Id.*, 20, 4); and in the *Odyssey* (3, 68) she is named as presiding over the assemblies of men, but nothing is said respecting her rank or origin. By Hesiod (*Theog.*, 185, 901, *seqq.*), she is said to be a Titaness, one of the daughters of Heaven and Earth, and to have borne to Jupiter the Fates, and the Seasons, Peace, Order, Justice, the natural progeny of Law (Θέμις), and all deities beneficial to mankind. In Pindar and the Homeric hymns, Themis sits by Jupiter, on his throne, to give him counsel. Themis is said to have succeeded her mother Earth in the possession of the Delphic oracle, and to have voluntarily resigned it to her sister Phœbe, who gave it as a natal-gift unto Phœbus Apollo.—Welcker says that Themis is merely an epithet of Earth. (*Tril.*, p. 39.) Hermann also makes Themis a physical being, rendering her name *Statinis*; while Böttiger, with apparently more justice, says, "She is the oldest purely allegorical personification of a virtue." (*Kunst-Mythol.*, 2, 110.—*Keightley's Mythology*, p. 198.)

THEMISOCRA, a city of Pontus, capital of a district of the same name. The town of Themiscyra appears to have been one of very early origin. Scylax mentions it as a Grecian state, and Herodotus also speaks of it. (*Scylax*, p. 83.—*Herod.*, 4, 86.) Both of these writers, however, place it at the mouth of the Thermodon; whereas Ptolemy locates it in the centre of the district Themiscyra, that is, more inland. This place appears to have been destroyed in the course of the Mithradatic war. (*Appian, B. Mithrad.*, c. 78.) Hence Strabo makes no mention of it; and Mela merely states, that, in the territory around the Thermodon, there once stood an ancient city named Themiscyra (1, 19). It is rather surprising that many of the ancient writers, and among them even Æschylus, never use the name Themiscyra as that of a city, but always as designating a plain. (*Æsch., Prom. V.*, 749.—*Compare Steph. Byz.*, s. v. *Χάδισα*.—*Apollod.*, 2, 5.—*Apoll. Rhod.*, 2, 870.) Diodorus, however, makes the founder of the Amazonian nation to

have built this city on the Thermodon (3, 44). In the plains of Themiscyra the Amazons were said to have founded a powerful kingdom. Here they were conquered by Hercules, and many slain. The followers of Hercules, on retiring from their country, took with them on board their vessels as many Amazons as they could find alive; these, however, when at sea, rose upon the Greeks, as is said, slew them to a man, and, being ignorant themselves of navigation, were carried by the winds and the waves to Cramni on the Palus Mæotis, and their name still lingered in fable for many ages, in connexion with the regions of Caucasus. (*Herod.*, 4, 110.—*Mannert, Geogr.*, vol. 6, pt. 2, p. 443.)

THEMISON, a celebrated physician, born at Laodicea, and the pupil of Asclepiades. He established himself at Rome about 90 B.C. Themison wished to find a middle course between the empiric system and dogmatism. This middle course, or *method*, he believed he had discovered in the theory of his master. He became, therefore, the founder of the school of *Methodists*, which introduced a greater degree of precision into the system of Asclepiades. Themison taught that there exists not only in the vessels, but, generally speaking, in all parts of the human frame, a disproportion which is the source of all maladies.—He was the first practitioner, also, that made use of leeches, which he applied to the temples in disorders of the head. (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 338.—*Sprengel, Hist. de la Méd.*, vol. 2, p. 20, *seqq.*)

THEMISTIUS, a celebrated orator and philosopher in the fourth century of the Christian era. He was a native of Paphlagonia, but passed the greater part of his days at Constantinople, where he enjoyed the highest favour with the Emperor Constantius, who elevated him to the rank of senator. He stood high also in the estimation of Julian, who made him prefect of Constantinople, and kept up an epistolary correspondence with him. He was highly regarded, too, by the successors of this prince down to Theodosius the Great, who confided to Themistius, although the latter was a pagan, the education of his son Arcadius. He was employed, also, in various public matters, and on several embassies. Themistius was the master of Libanius and St. Augustin, and, what was of rare occurrence in his day, presented a model of religious toleration and forbearance: hence we find an intimate friendship subsisting between him and Gregory of Nazianzus, and the latter styling him "the king of eloquence" (Βασιλεὺς λόγων). Themistius resided for some time also at Rome, and, both in this city as well as in Constantinople, he lectured on the systems of Pythagoras, Plato, and Aristotle, but more particularly the latter. He received no fees from his auditors; on the contrary, though not rich himself, he was liberal in ministering to the necessities of his less wealthy followers. The public discourses which remain to us of this orator, as well as his philosophical works, justify the high opinion which his contemporaries entertained of him. His style, formed by an attentive perusal of Plato, is marked by great perspicuity, elegance, and sweetness; nor is it, at the same time, at all wanting in strength and energy. Although the greater part of his discourses have for their subject the praises of emperors, and although this kind of writing is in itself both arid and devoid of interest, yet Themistius has succeeded in attracting the attention of his readers by the numerous allusions which he makes both to the mythology and the history of the Greeks, and by the instructive examples which he draws from the works of the ancient philosophers.—A memorable instance of the liberal spirit of Themistius is related by ecclesiastical historians. The Emperor Valens, who favoured the Arian party, inflicted many hardships and sufferings upon the Trinitarians, and daily threatened them with still greater severities. Themistius, to

whom these measures were exceedingly displeasing, addressed the emperor upon the subject in an eloquent speech, in which he represented the diversity of opinions among the Christians as inconsiderable compared with that of the pagan philosophers, and pleaded that this diversity could not be displeasing to God, since it did not prevent men from worshipping him with true piety. By these and other arguments Themistius prevailed upon the emperor to treat the Trinitarians with greater lenity.—Themistius illustrated several of the works of Aristotle, particularly the *Analytics*, the *Physics*, and the *Book on the Soul*.—Of his discourses Photius enumerates thirty-six: we have only, at the present day, thirty-three, and one other, the thirty-third, in a Latin translation. An edition of the entire remains of Themistius appeared from the Aldine press in 1634, fol. Of the orations, the best edition used to be that of Petavius (Petau), *Paris*, 1684, fol.; but now, for the text of Themistius, the best edition is that of Dindorf, *Cnablock*, 1832, 8vo.

THEMISTOCLES, a celebrated Athenian statesman and leader. His father Neocles was a man of high birth after the Athenian standard, but his mother was not a citizen, and, according to most accounts, not even a Greek. His patrimony seems to have been ample for a man of less aspiring temper. The anecdotes related of his youthful wilfulness and waywardness; of his earnest application to the pursuit of useful knowledge; of his neglect of the elegant arts, which already formed part of the Athenian education; of his profusion and his avarice; of the sleepless nights in which he meditated on the trophies of Miltiades, all point, with more or less of particular truth, the same way; to a soul early bent on great objects, and formed to pursue them with steady resolution, incapable of being diverted by trifles, embarrassed by scruples, or deterred by difficulties. The end he aimed at was not merely the good of his country, still less was it any petty mark of selfish cupidity. The purpose of his life was to make Athens great and powerful, that he himself might move and command in a large sphere. The genius with which nature had endowed him warranted this noble ambition, and it was marvellously suited to the critical circumstances in which he was placed by fortune. The peculiar faculty of his mind, which Thucydides contemplated with admiration, was the quickness with which it seized every object that came in its way, perceived the course of action required by new situations and sudden junctures, and penetrated into remote consequences. Such were the abilities which, at the period when he came forward, were most needed for the service of Athens. At the time when Themistocles was beginning to rise into credit with his fellow-citizens, another man of very different character already possessed their respect and confidence. This was Aristides, son of Lysimachus. (*Vid.* Aristides.) Like Themistocles, he too had the welfare of Athens at heart, but simply and singly, not as an instrument, but as an end. On this he kept his eye, without looking to any mark beyond it, or stooping to any private advantage that lay on his road. It is not surprising that a man of such a mould should have come into frequent conflict with a statesman like Themistocles, though their immediate object was the same, and though there was no great discordance between their general views of the public interest. When Aristides, without having incurred accusation or reproach, without being suspected of any ambitious designs, was sent by the ostracism into honourable banishment, because he had no equal in the highest virtue, his removal left Themistocles in almost undivided possession of the popular favour. His thoughts had long been turned towards the struggle that was now approaching. He had seen that Athens could not remain stationary; that she must either cease to exist as an independent state,

or else must take up a new position, and rise to a new rank in Greece: and this it was evident she could only do by cultivating the capacity she had received from nature, and of becoming a great maritime power. Early in the interval between the first and second Persian invasion, he had dexterously prevailed on the people to appropriate the profits of the silver-mines at Laurium (which they had hitherto shared among themselves) to the enlargement of their navy. Yet it was not by holding out the danger of a new Persian invasion that he gained their consent, but by appealing to their hatred and jealousy of *Ægina*, which was still at war with them, and was mistress of the sea. To be able to cope with this formidable rival, they built a hundred new galleys, and thus increased their naval force to two hundred ships; and it was probably at the same time that they were persuaded to pass a decree, which directed twenty triremes to be built every year. (*Böckh, Staatshaushalt. der Ath.*, 2, c. 18.) While the storm of the Persian invasion was slowly approaching, Themistocles was busied in allaying animosity and silencing disputes among the Grecian cities; and when, not long after this, the Athenians, alarmed for their safety, had sent to Delphi for advice, he is supposed, on very good grounds, to have influenced the well-known answer of the oracle, "that Jove had granted the prayer of his daughter Minerva, and that, when all beside was lost, a wooden wall should still shelter the citizens of Athens." This wooden wall, which was to afford the only refuge in the hour of danger, seemed best explained by the fleet, which, since it had been increased according to the advice of Themistocles, might well be deemed the surest bulwark of Athens. The elder citizens, however, thought it incredible that Minerva should abandon her ancient citadel, and resign her charge to the rival deity, with whom she had anciently contended for the possession of Attica. To them it seemed clear that the oracle must have spoken of the hedge of thorns, which once fenced in the rock of Pallas, and that this, if repaired and strengthened with the same materials, would be an impregnable barrier against all assaults. The existence of Athens hung on the issue of these deliberations. The people, in their uncertainty, looked to Themistocles for advice. His keen eye had probably caught a prophetic glimpse of the events that were to hallow the shores of Salamis; and he now reminded his hearers that a Grecian oracle would not have called the island the *divine* (this term had been used in the response just alluded to) if it was to be afflicted with the triumph of the barbarians, and was not rather to be the scene of their destruction. He therefore exhorted them, if all other safeguards should fail them, to commit their safety and their hopes of victory to their newly-strengthened navy. This counsel prevailed.—When intelligence of the capture of Athens was brought to the Greeks assembled with their vessels at Salamis, and, amid the consternation that ensued, it was resolved in council to retire from Salamis and give battle near the shore of the Isthmus, it was owing to the bold deportment of Themistocles alone that the allies were induced to change their determination and give battle in the straits. According to the accounts that have been given of this transaction, as Themistocles was returning to his ship from the council in which it had been resolved to sail away from Salamis, he was met by Mnecophilus, an Athenian officer, who, on hearing the issue of the conference, exclaimed that Greece was lost if such a counsel were adopted; for the allies, if now allowed to retreat, could no longer be kept together, but would be scattered to their several cities. This suggestion falling in with the opinion of Themistocles, induced him to return to the Spartan Eurybiades who commanded in chief, and pressing on him, with many additions, the arguments of Mnecophilus, he persuaded him to reconvene the council.

THEMISTOCLES.

Themistocles now urged the commanders to remain, both on account of the advantage which the narrow straits of Salamis gave to the Greeks, inferior as well in the speed as in the number of their ships, and also because, by so doing, they would preserve Megara, Salamis, and Ægina, with the Athenian women and children deposited in the latter places. When he found them still obstinate, he declared that the Athenians, if their feelings and interests, after all they had done, were so little regarded, would abandon the armament, and, taking on board their families, would seek a settlement elsewhere. This threat prevailed, and it was agreed to remain; but at the approach of the enemy the Peloponnesians again were eager to depart and provide for the defence of their own territories; on which Themistocles, to prevent the mischiefs he foresaw, and partly, also, with the double policy which marked his character, to secure to himself, in case of defeat, an interest with the conquerors, sent private information to the Persian admiral of the flight which was meditated by the Greeks, and advised him to guard against it by occupying both ends of the strait between Salamis and the main-land. After the glorious day of Salamis, when the remnant of the Persian fleet had been pursued as far as the island of Andros, Themistocles proposed to continue the chase, and then to sail to the Hellespont and break down the bridge. Eurybiades opposed him, on the ground that there was danger lest the Persians, being rendered desperate, might yet be successful; and the Peloponnesians generally agreeing with Eurybiades, the proposal was rejected. On this, Themistocles persuaded the Athenians, who had been most eager for pursuit, to acquiesce; while, if we believe in the motives commonly ascribed to him, he took advantage of the incident to secure for himself, in case of banishment, a refuge in Persia, by sending a secret messenger to Xerxes, to inform him of the plan which had been proposed, and say that Themistocles, through friendship to him, had procured its rejection. This view of the case, however, can hardly be the correct one. It may be easily conceived that a man like Themistocles loved the arts in which he excelled for their own sake, and might exercise the faculties with which he was pre-eminently gifted upon very slight occasions. In devising a plan, conducting an intrigue, surmounting a difficulty, in leading men to his ends without their knowledge and against their will, he might find a delight which might often be in itself a sufficient motive of action. We should be led, therefore, to suppose that this was the inducement which caused him to send this other secret message to Xerxes. For that, in the very moment of victory, when he had just risen to the highest degree of reputation and influence among his countrymen, he should have foreseen the changes which fortune had in store for him, and have conceived the thought of providing a place of refuge among the barbarians, to which he might fly if he should be driven out of Greece, is a conjecture that might very naturally be formed after the event, but would scarcely have been thought probable before it.—All Greece now resounded with the fame of Themistocles. The deliverance just effected was universally ascribed, next to the favour of the gods, to his foresight and presence of mind; and when the Grecian commanders met in the temple of Neptune on the Isthmus, to award the palm of individual merit, no one was generous enough to resign the first place to another, but most were just enough to award the second to Themistocles. Still higher honours, however, awaited him from Sparta, a severe judge of Athenian merit. He went thither, according to Plutarch, invited; wishing, Herodotus says, to be honoured. The Spartans gave him a chaplet of olive leaves: it was the reward they had bestowed on their own admiral Eurybiades. They added a chariot, the best the city possessed; and, to distinguish him above all other

THEMISTOCLES.

foreigners that had ever entered Sparta, they sent the three hundred knights to escort him as far as the borders of Tegea on his return. He himself subsequently dedicated a temple to Diana, as the goddess of good counsel.—Immediately after the battle of Plataea, the Athenian people had begun to bring back their families, and to rebuild their city and ramparts. But the jealousy excited in the Peloponnesians by the power and spirit which Athens had displayed was far stronger than their gratitude for what it had done and suffered in the common cause. An embassy arrived from Peloponnesus to urge the Athenians not to go on with their fortifications, but rather, as far as in them lay, to demolish the walls of all other cities out of the Peloponnesus, that the enemy, if he again returned, might have no strong place to fix his headquarters in, as recently in Thebes. If this demand had been complied with, Athens would have become entirely subject to Lacedæmon. At the same time, it was dangerous to refuse, since from the past conduct of Lacedæmon there was little ground to expect that gratitude would prevent it from any action prompted by jealousy or ambition; while it was vain to hope, that the military force of Athens, weakened by the number of citizens absent with the fleet, would be able to maintain itself without the aid of walls against the united strength of Peloponnesus. In this difficulty Themistocles advised them immediately to send away the Lacedæmonian ambassadors, to raise up the walls with the utmost possible celerity, men, women, and children joining in the work, and, choosing himself and some others as ambassadors to Sparta, to send him thither at once, but to detain his colleagues until the walls had attained a sufficient height for defence. He was accordingly sent to Lacedæmon, where he put off his audience from day to day, excusing himself by saying that he waited for his colleagues, who were daily expected, and wondered that they were not come. But when reports arrived that the walls were gaining height, he bade the magistrates not to trust to rumour, but to send some competent persons to examine for themselves. They sent accordingly, and, at the same time, Themistocles secretly directed the Athenians to detain the Lacedæmonian commissioners, but with the least possible show of compulsion, till himself and his colleagues should return. The latter were now arrived, and brought news that the walls had gained the height required: and Themistocles declared to the Lacedæmonians that Athens was already sufficiently fortified, and that henceforth, if the Lacedæmonians and their allies had anything to do, they must do it as to persons able to judge both of the common interest and their own. The Spartans were secretly mortified at their failure, and probably not the less so from the consciousness that the attempt had been an unhandsome one; but their discontent did not break out openly, and the ambassadors on each part went home unquestioned.—No Greek had yet rendered services such as those of Themistocles to the common cause; no Athenian except Solon had conferred equal benefits upon Athens. Themistocles was not unconscious of his own merit, nor careful to suppress his sense of it. He was thought to indicate it too plainly when he dedicated his temple above mentioned to Diana, and the offence was aggravated if he himself placed his statue there, where it was still seen in the days of Plutarch, who pronounces the form no less heroic than the soul of the man. In the same spirit are several stories related by Plutarch, of the indirection with which he sometimes alluded to the magnitude of the debt which his countrymen owed him. He would seem, indeed, not to have discovered, till it was too late, that there are obligations which neither princes nor nations can endure, and which are forfeited if they are not discharged. After the battle of Salamis, and while the terrors of the invasion were still fresh, his influence at Athens

THEMISTOCLES.

was predominant, and his power consequently great wherever the ascendancy of Athens was acknowledged: and he did not always scruple to convert the glory with which he ought to have been satisfied into a source of petty profit. Immediately after the retreat of Xerxes, he exacted contributions from the islanders who had sided with the barbarians, as the price of diverting from them the resentment of the Greeks. Another opportunity for enriching himself he found in the factions by which many of the maritime states were divided. Almost everywhere there was a party or individuals who needed the aid of his authority, and were willing to purchase his mediation. Themistocles, in short, accumulated extraordinary wealth on a less than moderate fortune. When his troubles had commenced, a great part of his property was secretly conveyed into Asia by his friends; but that part which was discovered and confiscated is estimated by Theopompus at a hundred talents, by Theophrastus at eighty; though, before he engaged in public affairs, all he possessed did not amount to so much as three talents. (*Plut., Vit. Themist., c. 25.*)—But if he made some enemies by his selfishness, he provoked others, whose resentment proved more formidable, by his firm and enlightened patriotism. Sparta never forgave him the shame he brought upon her by thwarting her insidious attempt to suppress the independence of her rival, and he further exasperated her animosity by detecting and baffling another stroke of her artful policy. The Spartans proposed to punish the states which had aided the barbarians, or had abandoned the cause of Greece, by depriving them of the right of being represented in the Amphictyonic congress. By this measure, Argos, Thebes, and the northern states, which had hitherto composed the majority in that assembly, would have been excluded from it, and the effect would probably have been that Spartan influence would have preponderated there. Themistocles frustrated this attempt by throwing the weight of Athens into the opposite scale, and by pointing out the danger of reducing the council to an instrument in the hands of two or three of its most powerful members. The enmity which he thus drew upon himself would have been less honourable to him, if there had been any ground for a story, which apparently was never heard of till it became current among some late collectors of anecdotes, from whom Plutarch received it: it has been popular because it seemed to illustrate the contrast between the characters of Themistocles and Aristides, and to display the magnanimity of the Athenians. Themistocles is made to tell the Athenians that he has something to propose which will be highly beneficial to the commonwealth, but which must not be divulged. The people depute Aristides to hear the secret, and to judge of the merit of the proposal. Themistocles discloses a plan for firing the allied fleet at Pagasæ, or, according to another form of the story adopted by Cicero (*Off., 3, 11*), the Lacedæmonian fleet at Gythium. Upon this, Aristides reports to the assembled people that nothing could be more advantageous to Athens than the counsel of Themistocles, but nothing more dishonourable and unjust. The generous people reject the proffered advantage, without even being tempted to inquire in what it consisted.—Themistocles was gradually supplanted in public favour by men worthy indeed to be his rivals, but who owed their victory less to their own merit than to the towering pre-eminence of his deserts. He himself, as we have observed, seconded them by his indiscretion in their endeavours to persuade the people that he had risen too high above the common level to remain a harmless citizen in a free state: that his was a case which called for the extraordinary remedy prescribed by the laws against the power and greatness of an individual which threatened to overlay the young democracy. He was condemned to temporary exile by the same process of

THEMISTOCLES.

ostracism which he had himself before directed against Aristides. He took up his abode at Argos, which he had served in his prosperity, and which welcomed, if not the saviour of Greece, at least the enemy of Sparta. Here he was still residing, though he occasionally visited other cities of the Peloponnesus, when Pausanias was convicted of his treason. In searching for farther traces of his plot, the ephori found some parts of a correspondence between him and Themistocles, which appeared to afford sufficient ground for charging the Athenian with having shared his friend's crime. They immediately sent ambassadors to Athens to accuse him, and to insist that he should be punished in like manner with the partner of his guilt. We have no reason to believe that there was any more solid foundation for the charge than what Plutarch relates; that Pausanias, when he saw Themistocles banished, believing that he would embrace any opportunity of avenging himself on his ungrateful country, opened his project to him in a letter. Themistocles thought it the scheme of a madman, but one which he was not bound, and had no inducement, to reveal. He may have written, though his prudence renders it improbable, something that implied his knowledge of the secret. But his cause was never submitted to an impartial tribunal: his enemies were in possession of the public mind at Athens, and officers were sent with the Spartans, who tendered their assistance, to arrest him and bring him to Athens, where, in the prevailing disposition of the people, almost inevitable death awaited him. This he foresaw, and determined to avoid. In the Peloponnesus he could no longer hope to find a safe refuge. He sought it first in Corcyra, which was indebted to him for his friendly mediation in a dispute with Corinth about the Leucadian peninsula, and had, by his means, obtained the object it contended for. The Corcyreans, however willing, were unable to shelter him from the united power of Athens and Sparta, and he crossed over to the opposite coast of Epirus. The Molossians, the most powerful people of this country, were now ruled by a king named Admetus, whom Themistocles, in the day of his power, had thwarted in a suit which he had occasion to make to the Athenians, and had added insult to disappointment. Themistocles adopted the desperate resolution of throwing himself upon the mercy of this his personal enemy. The king was fortunately absent from home when the stranger arrived at his gate, and his queen Phthia, in whom no vindictive feelings stifled her womanly compassion, received him with kindness, and instructed him in the most effectual manner of disarming her husband's resentment and securing his protection. When Admetus returned, he found Themistocles seated at his hearth, holding the young prince whom Phthia had placed in his hands. This among the Molossians was the most solemn form of supplication, more powerful than the olive-branch among the Greeks. The king was touched; he raised the suppliant with an assurance of protection, which he fulfilled, when the Athenian and Lacedæmonian commissioners dogged their prey to his mansion, by refusing to surrender his guest. Themistocles, however, would seem not to have intended to fix his abode among the Molossians, and he had probably very early conceived the design of seeking his fortune at the court of Persia. He is said to have consulted the oracle at Dodona, perhaps less for a direction than for a pretext: the answer seemed to point to the great king; and Admetus, practising the hospitality of the heroic ages, supplied his guest with the means of crossing over to the coast of the *Ægean*. At the Macedonian port of Pydna he found a merchant-ship bound for Ionia, and, after a narrow escape from the Athenian fleet, which was then besieging Naxos, and to the coast of which island he had been carried by a storm, Themistocles was safely landed in the harbour of Ephesus. It was by letter that he first

made himself known to Artaxerxes, who was then on the Persian throne. In his communication he acknowledged the evil he had inflicted on the royal house in the defence of his country, but claimed the merit of having sent the timely warning by which Xerxes was enabled to effect his retreat from Salamis in safety, and of having diverted the Greeks from the design of intercepting him. He ventured to add, that his persecution and exile were owing to his zeal for the interests of the King of Persia, and that he had the power of proving his attachment by still greater services; but he desired that a year might be allowed him to acquire the means of disclosing his plans in person. His request was granted, and he assiduously applied himself to study the language and manners of the country, with which he became sufficiently familiar to conciliate the favour of Artaxerxes by his conversation and address, no less than by the promises which he held out, and the prudence of which he gave proofs. If we may believe Plutarch, he even excited the jealousy of the Persian courtiers by the superior success with which he cultivated their arts: he was continually by the king's side at the chase and in the palace, and was admitted to the presence of the king's mother, who honoured him with especial marks of condescension. He was at length sent down to the maritime provinces, perhaps to wait for an opportunity of striking the blow, by which he was to raise the power of Persia upon the ruin of his country. In the mean time, a pension was conferred upon him in the Oriental form; three flourishing towns were assigned to him for his maintenance, of which Magnesia was to supply him with bread, Myus with viands, and Lampsacus with the growth of her celebrated vineyards. He fixed his residence at Magnesia, in the vale of the Mæander, where the royal grant invested him with a kind of princely rank. There death overtook him, hastened, as it was commonly supposed, by his consciousness of being unable to perform the promises which he had made to the king. Thucydides, however, evidently did not believe the story that he put an end to his own life by poison. That fear of disappointing the Persian king should have urged him to such an act is indeed scarcely credible. Yet we can easily conceive that the man who had been kept awake by the trophies of Miltiades, must have felt some bitter pangs when he heard of the rising glory of Cimon. Though his character was not so strong as his mind, it was great enough to be above the wretched satisfaction implied in one of Plutarch's anecdotes: that, amid the splendour of his luxurious table, he one day exclaimed, "How much we should have lost, my children, if we had not been ruined." It must have been with a far different feeling that he desired his bones to be secretly conveyed to Attica, though the uncertainty which hangs over so many actions of his life extends to the fate of his remains. A splendid monument was raised to him in the public place at Magnesia; but a tomb was also pointed out by the seaside, within the port of Piræus, which was generally believed to contain his bones. His descendants continued to enjoy some peculiar privileges at Magnesia in the time of Plutarch; but neither they nor his posterity at Athens ever revived the lustre of his name. Themistocles died in his 65th year, about 449 B.C. (*Thirlwall's History of Greece*, vol. 2, p. 265, *seqq.*)—There are certain letters which go under the name of Themistocles, and which have come down to our times. These letters have been ascribed to the Athenian commander of the same name, but without sufficient evidence. They are the production of some one who has amused himself with this species of literary imposture, and has placed himself, in imagination, in the position occupied by the conqueror of Salamis, after he had experienced the ingratitude of his countrymen. The deception is well kept up. The best edition is that of Schoettgen, *Lips.*, 1710, 8vo,

republished in 1722. Bremer's edition is little more than a reprint of this, *Leipzig*, 1776, 8vo. (*Hefmann, Lex. Bibliograph.*, vol. 2, p. 661.)

THEOCRITUS, a celebrated Greek Bucolic poet, a native of Syracuse, who flourished under Ptolemy Philadelphus, king of Egypt, and Hiero II. of Syracuse, B.C. 370. He was instructed, in his earlier years, by Asclepiades of Samos, and Philetas of Cos; subsequently he became the friend of Aratus, and passed a part of his days at Alexandria, and the remainder in Sicily. It has been supposed that he was strangled by order of Hiero, king of Sicily, in revenge for some satirical invectives; but the passage of Ovid, on which the supposition rests, mentions only "the Syracusan poet," and it does not follow that this was our bard. (*Ovid, Ib.*, 561.) Theocritus distinguished himself by his poetical compositions, and has carried Bucolic verse to its highest perfection. No one of those who have endeavoured to surpass him, whether among the ancients or moderns, has been able to equal his simplicity, his naïveté, and his grace. He is not, however, free from the faults of his age, in which the decline of pure taste had already become apparent. His Bucolics are written in the Doric dialect. They consist of thirty poems, which bear the title of *Idyle* (*Εἰδύλλια*), and twenty one other smaller pieces under the name of epigrams. The thirty Idyls, however, are not all by Theocritus. It appears that they had been composed by different poets, and united into one body by some grammarians. These thirty pieces are not all, strictly speaking, of the Bucolic order; some appear to be fragments of epic poems; two of them would seem to resemble mimes; several belong to lyric poetry.—Theocritus has sometimes been censured for the rusticity, and even indelicacy, of some of his expressions. The latter charge admits of no defence. With regard to the former, it must be observed, that they who conceive that the manners and sentiments of shepherds should always be represented, not as they are or have been in any age or country, but greatly embellished or refined, do not seem to have a just idea of the nature of pastoral poetry. The Idyls of Theocritus are, in general, faithful copies of nature, and his characters hold a proper medium between rudeness and refinement.—The "Epithalamium of Helen," one of the thirty, has been supposed to bear a resemblance to the Song of Solomon. Some have concluded from this that Theocritus was acquainted with the latter piece. The discussion is a very interesting one for biblical critics; since, if it can be shown that Theocritus knew of the Song of Solomon, the commonly received opinion, according to which this poem did not exist in Greek at the time of Theocritus (Ptolemy Philadelphus having only caused the Pentateuch to be translated into Greek), is completely refuted. Our limits forbid any investigation of this subject. It is believed, however, that an examination of the point will end in the conviction that Theocritus never saw the composition in question.—"The poetry of Theocritus," observes Elton, "is marked by the strength and vivacity of original genius. Everything is distinct and peculiar; everything is individualized; and is brought strongly and closely to the eye and understanding of the reader, so as to stamp the impression of reality. His scenes of nature, and his men and women, are equally striking for circumstance and manners, and may equally be described by the epithet picturesque. His humour is chiefly shown in the portraiture of middle-rank city-life, where it abounds with strokes of character that are not confined to ancient times or national peculiarities, but suit all ages and all climates. He is not limited to rustic or comic dialogue or incident, but passes with equal facility to refined and elevated subjects; and they who have heard only of the rusticity of Theocritus, will be unexpectedly struck by the delicacy of his thoughts, and the

richness and elegance of his fancy. While some have made coarseness an objection to Theocritus, others have affected to talk of his assigning to his goatherd sentiments above their station; as if Theocritus were not the best judge of the manners of his own countrymen. If the allusion to tales of mythology be meant, these were doubtless familiar in the mouths, and current in the *improvisi* songs, of the peasants of Sicily. They who, in conformity with the mawkish modern theory of pastorals, sit in judgment to decide what idyls are, and what are not, legitimate pastorals, may be told, in the words of Pope on his own pastorals, while ironically depreciating them in comparison of those of Philipe, to which they are, in fact, inferior, that if certain idyls be not pastorals, they are something better. But the term idyl, among the Greeks, was miscellaneous and general. It designated what we call Fugitive Poetry: and such also among the Latins are the *Eidyllia* of Claudian and Ausonius. Thus, in Theocritus, besides the country eclogue, we find under the title of idyl the dramatic town-eclogue, the epithalamium, the panegyric, and the tale of heroic mythology. The coarse indecency of allusion in some passages may be objected to with better reason; not as unsuitable to that innocence of an ideal golden age which has been foolishly thought essential to pastoral; for the only pastoral that has either value or intelligible meaning is, properly, a representation of common life, rural manners, and rural scenes as they are; but these passages are objectionable in every sense. They show character, indeed; but it is character that were better hidden: the depraved grossness of manners corrupted, and of human nature degenerated." (*Specimens of the Classic Poets*, vol. 1, p. 241.)—The best editions of Theocritus are, that of Wharton, *Oxon.*, 1770, 2 vols. 4to; that of Valckenær, *L. Bat.*, 1773, &c., 8vo; that of Gaisford, in the *Poetae Minores* (*Oxon.*, 1816-20, 4 vols. 8vo), and that of Kiessling, *Lips.*, 1819, 8vo, republished, along with Heindorf's *Bion* and *Moschus*, by Valpy, *London*, 1829, 2 vols. 8vo.—II. An epigrammatic poet, a native of Chios, who flourished in the time of Alexander. (Consult *Athenæus*, 6, p. 231, *ed. Schneigh.*, vol. 2, p. 386, and *Schöll, Hist. Lit. Gr.*, vol. 3, p. 125.)

THEOCRITUS, I. a Greek orator and poet of Phaselis in Pamphylia, son of Aristander, and disciple of Isocrates. He wrote 50 tragedies, besides other works, of which some fragments exist. He was one of those selected by Queen Artemisia to deliver funeral eulogies on her deceased husband Mausolus; and, according to one account, he gained the prize in a dramatic contest connected with the funeral obsequies of the prince. He died at Athens, at the age of 41. (*Suid.*, s. v. Θεοκρίτης.)—II. A son of the preceding, and a rhetorician. He wrote a eulogy on Alexander of Epirus, and also historical commentaries, as well as other works. (*Suid.*, s. v.)

THEODORA, wife of the Emperor Justinian. (*Vid. Justinianus.*)

THEODORETUS, one of the Greek fathers, a native of Antioch, and a disciple of Chrysostom. He was made bishop of Cyrrhus, in Syria, A.D. 420, and, after having favoured the opinions of Nestorius, he wrote against that heresiarch. His zeal for the Catholic faith rendered him obnoxious to the Eutychians, by whom he was deposed in the synod which they held at Ephesus; but he was restored to his diocese by the council of Chalcedon, A.D. 431. Nothing is known of his farther history, except that he was alive till after A.D. 460. He is the author of a history commencing A.D. 324, where that of Eusebius ends, and continued down to A.D. 429. The best edition is that of Reading, *Camt.*, 1720, fol. Theodore bears a high rank among the commentators on the Scriptures for the purity of his style. Occasionally, however, he abounds too much with metaphors. His work is rather deficient

in chronological exactness, yet it contains many valuable documents, and some remarkable circumstances which other ecclesiastical historians have omitted. He wrote, besides his history, commentaries on the Scriptures, epistles, lives of famous anchorites, dialogues, books on heresy, and discourses on Providence and against the pagans.—His works have been edited by Sirmond and Garnier, *Paris*, 1642-84, 5 vols. fol., and also published at *Halle*, 1769-74, 5 vols. fol.

THEODORUS, I. a philosopher, disciple of Anicetius, and a native of Cyrene. For the freedom with which he spoke concerning the gods, he was stigmatized with the name of atheist, and banished from Cyrene. He took refuge in Athens; but his impiety would have proved fatal to him, had not Demetrius Phalereus interposed in his favour. Under his protection he gained access to the court of Ptolemy Lagi. Venturing, after a long interval, to return to Athens, it is related that he suffered death by hemlock; but whether his offence was, in reality, atheism, or whether it was merely contempt for the Grecian superstitions, has been much disputed. (*Enfield, Hist. Philos.*, vol. 1, p. 196.)—II. A rhetorician of Gadara, or, as he is more commonly called, of Rhodes. He was the preceptor of Tiberius, who was afterward emperor, and hit off his character so well when he described him as a mixture of mud and blood (*πῆλόν αἷματι περυσμένον*). Suidas, however, ascribes these words to Alexander of Æges when speaking of Nero. (*Sueton.*, *Vit. Tib.*, c. 57.) According to Quintilian, Theodorus wrote several works (3, 1, 18). His writings, which have perished, were recommended by Dio Chrysostomus as models of style. (*Dio Chrys.*, *περὶ λόγ. ἀσκ.*—*Schöll, Gesch. Gr. Lit.*, vol. 2, p. 529.)—III. A writer on architecture. (Consult the remarks of Pinder in *Schöll, Gesch. Gr. Lit.*, vol. 3, p. 601.)—IV. A Greek monk, surnamed Prodrômus, who lived in the early part of the 12th century. He has left various poems, only a part of which have been edited. He is the author, also, of a very poor romance, entitled "The Loves of Rhodanthe and Dosicles." There is only one edition of this work, that of Gaulman, *Paris*, 1625, 8vo.

THEODOSIA, a town on the southeast side of the Tauric Chersonese, called also Capha, now *Caffa* or *Feodosia*. (*Mela*, 2, 1.)

THEODOSIOPOLIS, I. a town of Armenia, built by Theodosius. It was situate east of Arze, on the river Araxes, and was a frontier town of the lower empire. It is now called *Hassan-Cala*, and otherwise *Cali-cala*, or the *Beautiful Castle*. (*Procop.*, *Pers.*, 1, 10.—*Id.*, *de Ædific.*, 3, 5.)—II. Another in Mesopotamia, on the river Chaboras. Its previous name was Resaina, and it was founded by a colony in the reign of Septimius Severus. Hence it was sometimes called *Colonia Septimia Resanensiorum*. The modern name *Ras-ain* is one of Arabic origin, and signifies the *fountain of a river*, in allusion to the numerous springs which are here. The ancient name *Resaina* was in all probability of similar origin, and was merely retained when the Roman settlement was made here. (*Amm. Marcell.*, 23, 14.—*Bischoff und Müller, Wörterb. der Geogr.*, p. 344.)

THEODOSIUS, I. a distinguished officer in the reign of Valentinian I., whose brave and skilful conduct preserved Britain and recovered Africa. He was unjustly put to death by Gratian, shortly after the latter's accession to the throne.—II. Flavius, surnamed "the Great," a celebrated Roman emperor, son of the preceding. He was invested with the imperial purple by Gratian, who made him his colleague, and gave him the eastern empire, with the addition of Illyricum. Theodosius, thus raised to a share of the sovereign authority, speedily showed himself worthy of the high trust committed to him, that of restoring the fortunes of a falling empire. The courage of the Romans had been so much shaken by a recent defeat near Adrian-

THEODOSIUS.

opella, in which the Emperor Valens and almost two thirds of his army were slain by the Goths, that Theodosius did not deem it prudent to hazard a general engagement with the same foe; but, like another Fabius, he saved his own forces, harassed the enemy, taught his men that the Goths were not invincible, and gradually restored to them their courage, perfected by improved discipline and temperate caution. At length Fritigern, the hostile leader, died, and the Goths, having no longer a chief capable of controlling the haughty subordinate leaders of their ill-compacted confederacy, became disunited, and one by one submitted to the superior skill, policy, and authority of Theodosius. Great numbers of them received the pay and were incorporated into the armies of that empire which they had recently been on the brink of destroying, and the remainder voluntarily engaged to defend the Danube against the Huns. Thus, in about four years, the Eastern Empire was rescued from the most formidable danger by which it had ever been assailed, and seemed once more in a state of security. While Theodosius was thus employed, another calamity befell the Western Empire. Maximus revolted against Gratian, and the latter, who was then in Gaul, having fled towards Italy, was overtaken and put death at Lugdunum. The death of this prince left his young brother, Valentinian II., nominal emperor of the West, though the usurper Maximus assumed that title. Theodosius was obliged to conceal his resentment against the murderer of his benefactor, not being yet in a condition to quit his own dominions; and he even entered into a treaty with him, leaving him in undisputed possession of Gaul and Britain. But Maximus, encouraged by the success with which his rebellion had been attended, resolved to deprive Valentinian of even the nominal power which he enjoyed in Italy. Unable to defend his territories, the latter fled to Theodosius and besought his aid. Theodosius, thereupon, having completed the pacification of his own dominions, immediately marched against the usurper, defeated him in two successive engagements, and, his own troops having yielded him up, put him to death. Valentinian II. was thus restored to the throne of the Western empire; a throne which his weak character did not enable him to fill and to defend. Theodosius, after his triumph over Maximus, resolved to visit Rome, and aid his imperial pupil in reforming the abuses prevalent in that city. This visit is mentioned on account of the decrees published by Theodosius for the complete suppression of idolatrous worship at Rome. All sacrifices were prohibited under heavy penalties, the idols were defaced, and the temples of the gods were abandoned to ruin and contempt. These decrees met but a feeble resistance, and from that time may be dated the complete and final overthrow of pagan idolatry in Rome. Having thus completed the triumph of Christianity over paganism, Theodosius returned to the East, and employed himself in the kindred task of putting an end to the heresies of the Church, and establishing the predominance of the orthodox over the Arian party. Valentinian II. had but a short time recovered possession of the empire of the West, when he was murdered by Arbogastes, a Frank of a bold and warlike character, who had obtained a great ascendancy over him. Arbogastes did not himself assume the purple, but gave it to Eugenius, deeming it more safe to possess the power than the name of emperor. Theodosius once more prepared to avenge the murder of a colleague. He raised a powerful army, forced the passes of the Alps, encountered the army of the usurper, and inflicted on him a decisive overthrow. Eugenius was killed by his own defeated troops; and Arbogastes, fearing the just resentment of the victor, died by his own hand. The whole Roman empire might have been once more reunited under one imperial sovereign, had Theodosius been ambitious of that sole

THEODOSIUS.

dominion. But, being perfectly persuaded of the necessity of an emperor in each of the imperial cities, he assigned to his younger son Honorius the sceptre of the Western empire, and associated Arcadius the elder with himself in the East. Scarcely had he completed this arrangement, when his constitution, which had always been feeble, overtaken with the exertions of this campaign and the cares of state, yielded to the shock, and he expired, to the universal regret of the empire, which beheld the splendour of the Roman name passing away with him, its last great emperor. This event took place A.D. 395. Theodosius, at the time of his death, was 80 years of age, and had reigned 16 years. Few of the Roman emperors, indeed, died more lamented than Theodosius the Great. His sincere attachment to Christianity, and the efforts which he made to further its progress, contributed, it is true, very materially to the advancement of his fame among a large and influential class of his subjects; but his character, on other accounts, exhibited so many points deserving of applause, that even the most determined of his enemies among pagan writers are compelled to acknowledge his merits, and to praise the mild and impartial spirit in which he conducted his government. The welfare of his people seems to have supplied the ruling motive of his policy in peace and in war; and, although bred a soldier and desirous of military glory, he on all occasions appeared more willing to sacrifice his reputation for courage than to earn the renown of a hero at the expense of life and property. The greatest stain, perhaps, which attaches to his character, is the severity which he employed in punishing a popular insurrection which had taken place at Thessalonica. This event occurred A.D. 390. The origin of the catastrophe was in itself very trivial, being simply the imprisonment of a favourite charioteer of the circus. This provocation, added to some former disputes, so inflamed the populace, that they murdered their governor and several of his officers, and dragged their mangled bodies through the mire. The resentment of Theodosius was natural and merited, but the manner in which he displayed it was in the highest degree inhuman. An invitation was given, in the emperor's name, to the people of Thessalonica, to an exhibition at the circus; and, when a great concourse had assembled, they were massacred by a body of barbarian soldiery, to the number, according to the lowest computation, of 7000, and to the highest, of 15,000. For this atrocious proceeding, Ambrose, with great courage and propriety, refused him communion for eight months, a sentence to which the repentant emperor was compelled to submit. It ought, however, in justice to be remembered, that the resentment of Theodosius was inflamed by the misrepresentations of his minister Rufinus; and also that, after the first burst of passion which accompanied the fatal order had been allowed to subside, he sent a messenger to countermand it, who unfortunately did not arrive until the repentance of his master could be of no possible avail. (*Hetherington's History of Rome*, p. 264, *seqq.*—*Encyclop. Metropol.*, div. 3, vol. 3, p. 238.)—III. The second emperor of the name, was the son of Arcadius, emperor of the West, and grandson of the preceding. His father died when he was only eight years of age; but the minority of the prince was faithfully directed by the wisdom of Anthemius, the prefect, whose excellent abilities were not unequal to the arduous task committed to his care. But he found it expedient, either with the view of removing jealousy, or of gratifying the ambition of Pulcheria, the sister of the young emperor, to associate her in the management of affairs; for, though she was only two years older than Theodosius, her mind was much more mature and vigorous, and in all respects better fitted to take a share in the duties of government. At the age of sixteen, accordingly, she was saluted with the title of Augusta. Pul-

cheria, in fact, though arrayed in female attire, was the only individual among the descendants of Theodosius who exhibited any tokens of his manly spirit. She superintended at the same time the education of her brother, whose mind she soon discovered to be incapable of rising above the mere forms of polished life; and for this reason alone, it has been candidly supposed, she limited her instructions to those external observances which might qualify him to represent the majesty of the East, while the real authority and patronage of office might still be retained in her own hands. She even chose a wife for him in the person of Eudocia, an Athenian maid, who first presented herself at court as a suppliant, and who, as the consort of Theodosius, was destined to experience a great variety of fortune. (*Vid.* Eudocia I.) The reign of Theodosius, therefore, was virtually that of Anthemius and Pulcheria. The principal event during its continuance was the invasion of the Huns under the celebrated Attila, who carried fire and sword to the very gates of Constantinople, and only granted peace on conditions most favourable to himself and humiliating to the empire.—Theodosius met his death by a fall from his horse in hunting, A.D. 450. In the reign of this emperor was compiled the *Theodosian Code*, consisting of all the constitutions of the Christian emperors, from Constantine the Great to his own time. (*Heinecc., Antiq. Rom., proem. 22.*)—IV. A mathematician of Tripolis, in Lydia, who flourished probably under the Emperor Trajan, about A.D. 100. He wrote three books on the doctrine of the sphere, of which Ptolemy and succeeding writers availed themselves. They were translated by the Arabians into their language from the Greek, and afterward translated from the Arabic into Latin. The best edition is that of Hunt, 8vo, *Oxon.*, 1707.

THEOGNIS, a native of Megara, in Greece, born B.C. 583, and who attained to the age of eighty-eight years. He is one of the Greek Gnostic poets. Theognis was exiled from Megara for his political sentiments, and retired in consequence to Thebes, where he took up his abode. He was a considerable traveller for those days, a warm politician, a man of the world, and, as it should seem, of pleasure too; and his pithy maxims upon public factions and private quarrels, debtors and creditors, drinking, dressing, and spending, seem the fruits of personal experience, the details of which other parts of his poetry very sufficiently celebrate. If we understand Suidas correctly, there existed in his time three collections of Theognidean verses: 1. Miscellaneous Gnostic elegies, to the number of 2800 lines. 2. A Gnomology of the same sort, addressed to Cymus. 3. Other didactic and admonitory poems.—The total number of lines constituting the mixed mass which we now have under the name of Theognis, inclusive of the 159 new verses discovered by Bekker, in 1815, in a Modena manuscript, amounts to 1392 or thereabout. They are all exclusively in elegiac metre, but are evidently a farrago huddled together from the voluminous originals anciently existing, and also, in numerous instances, ignorantly interpolated with passages from the elegies of Solon and Mimnermus. It must, indeed, be immediately obvious to the reader, that poems, or, rather, verses consisting of so many hundreds of gnostic couplets like these, could no more be expected to go down the stream of time entire than a ship without bolts; quotation alone would infallibly break the continuity, or, rather, collocation of the lines; and intentional compilations of passages, having a generally similar tendency, would almost ensure the loss of such parts as were not included in any of the larger selections. In the now existing Theognis, Cymus is certainly the person principally addressed; but Polypades is also not unfrequently named, and Simonides, Onomacritus, Clearchus, Democles, Academicus, and Timagoras are mentioned; it is clear, therefore, that

there has been an utter confusion, and we must now take it as it is, without vainly endeavouring to pick out and sort the different ingredients which enter into its composition. (*Quarterly Review*, No. 95, p. 89, *seqq.*)—Some ancient authors accuse Theognis of disseminating immoral voluptuousness in the guise of moral precept. Nothing of this kind appears in those relics of his poetry which have reached us, though little can be said for many of his notions of morality. His verses, indeed, like those of Hesiod, were learned by rote in the schools; but with this application of them a modern moralist would readily dispense. The verification of Theognis is marked in general by rhetorical fluency and metrical neatness.—The best editions of Theognis are, that of Brunck, in the *Poete Gnomici*; that of Bekker, *Lips.*, 1815, 8vo; and especially that of Welcker, *Frankf.*, 1826, 8vo. (*Hoffmann, Lex. Bibliogr.*, vol. 3, p. 705.)

THEON, I. a native of Smyrna, who probably lived about the commencement of the second century of our era. He was a Platonist in his tenets, and wrote a treatise on the works of Plato, so far as they related to four branches of mathematical science; namely, geometry, arithmetic, music, and astronomy. We have only remaining the part that relates to arithmetic and music. It was first published in 1644, with notes by Bouillaud, *Paris*, 4to. Another edition appeared in 1827, with annotations by De Gelder, *Lugd. Bat.*, 8vo.—II. A native of Alexandria, contemporary with Pappus, taught mathematics in the capital of Egypt, and flourished towards the end of the fourth century of our era. Theon observed a solar and lunar eclipse A.D. 365. We have from his pen a "Commentary on the Elements of Euclid," under the title of *Συνόψεις* (*Conferences*), unless, indeed, this work is by Euclid himself, in which case Theon will only have given a revised edition of it. He afterward composed Commentaries (*Εξηγήσεις*) on the manual tables of Ptolemy, on the *Almagest* of the same writer, and on the poems of Aratus. As to the Commentary on the *Almagest*, it must be remarked that the labours of Theon do not extend farther than the first two books, on the fourth, on a part of the fifth, on books 6, 7, 8, 9, and 10, and on the 13th. The commentary on the third book is by Nilus Cabasilas; the commencement of that on the fifth by Pappus. The commentary of Theon on Euclid is found in the editions of the latter. That on the *Almagest* has only been printed twice; namely, in the edition of the latter work by Grynæus and Camerarius, *Basil.*, 1538, fol., and separately, with a French translation, by the Abbé Halma, *Paris*, 1821, 4to. The scholia on Aratus, which have come down to us in a very interpolated state, are found in the editions of that poet. The commentary on the tables of Ptolemy was first given entire by Halma, *Paris*, 1821. Before this only two fragments had been published. (*Schöll, Hist. Lit. Gr.*, vol. 7, p. 49.)

THEOPHANES, I. a Greek historian, born at Mytilene. He was very intimate with Pompey, and from his friendship with the Roman general his countrymen derived many advantages. Theophanes wrote a "History of the wars of the Romans in various countries, under the command of Pompey." Of this work there remain only a few fragments, quoted by Strabo, Plutarch, and Stobæus. Plutarch gives him a very unfavourable character for historic veracity. (*Plut., Vit. Pomp.*)—II. A Byzantine historian. He was of a rich and noble family, and turned monk. When Nicephorus, patriarch of Constantinople, was exiled by the Emperor Leo the Armenian, Theophanes paid him extraordinary honours, and was himself banished to the isle of Samothrace, where he died in 818. His Chronicle, beginning where that of Syncellus terminated, was extended to the reign of Michael Curopalata. It is valuable for its facts, but displays the credulity and weak judgment of a superstitious mind. It was printed at

Paris with a Latin version, and the notes of F. Goar, under the care of Combès, in 1885, fol.

THEOPHILUS, I. the associate of Tribonian and Dorotheus in compiling the Institutes, of which work he has left a Paraphrase in Greek, a production of great utility for the knowledge of Roman law. He also wrote a commentary, in the same language, on the Pandects, of which some fragments remain. The best edition of Theophilus is that of Reitz, *Hag. Com.*, 1751, 4to.—II. A physician who flourished under Heraclius about A.D. 630. He wrote a treatise *περί σπέρματος* (*De Urinis*), the best edition of which is that of Guidot, *Lugd. Bat.*, 1703, 8vo, and 1731. The best edition of another work of his, on the Human Frame, is that of Morell, *Paris*, 1556, 8vo.—III. A bishop of Antioch, ordained to that see in 168 or 170 A.D. In his zeal for orthodoxy, he wrote against Marcion, and also against Hermogenes, and he composed other tracts, some of which are preserved. We have extant also three books against Autolycus. These works display, it is said, the earliest example of the use of the term "Trinity," as applied to the three persons of the Godhead. His work against Autolycus was published by Conrad Gesner, at Zurich, in 1546. It was annexed, also, to the Supplement of the Bibliotheca Patrum in 1624.

THEOPHRASTUS, a Greek philosopher, a native of Eresos in the island of Lesbos. He was born B.C. 382, and received the first rudiments of education under Alcippus, in his own country, after which he was sent by his father, who was a wealthy man, to Athens, and there became a disciple of Plato, and, after his death, of Aristotle. Under these eminent masters, blessed by nature with a genius capable of excelling in every liberal accomplishment, he made great progress both in philosophy and eloquence. It was on account of his high attainments in the latter that, instead of Tyrannus, his original name, he was called, as some say, by his master, but more probably by his own followers, *Euphrastus* ("the fine speaker"), and subsequently Theophrastus ("the divine speaker"). When he undertook the charge of the Peripatetic school, he conducted it with such high reputation that he had about two thousand scholars; among whom were Nicomachus, the son of Aristotle, whom his father had intrusted by will to his charge; Erasistratus, a celebrated physician; and Demetrius Phalereus, who resided with him in the same house. His erudition and eloquence, united with engaging manners, recommended him to the notice of Cassander, and also of Ptolemy, who invited him to visit Egypt. So great a favourite was he among the Athenians, that, when one of his enemies accused him of teaching impious doctrines, the accuser himself escaped with difficulty the punishment which he endeavoured to bring upon Theophrastus.—Under the archonship of Xenippus, B.C. 305, Sophocles, the son of Amphicliides, obtained a decree (upon what grounds we are not informed), making it a capital offence for any philosopher to open a public school without an express license from the senate. Upon this all the philosophers left the city. But the next year, the person who had proposed the law was himself fined five talents, and the philosophers returned with great public applause to their respective schools. Theophrastus, who had suffered, with his brethren, the persecution inflicted by this oppressive decree, shared the honour of the restoration, and continued his debates and instructions in the Lyceum.—Theophrastus is highly celebrated for his industry, learning, and eloquence, and for his generosity and public spirit. He is said twice to have freed his country from the oppression of tyrants. He contributed liberally towards defraying the expenses attending the public meetings of the philosophers, which were held, not for the sake of show, but for learned and ingenious conversation. In the public schools he common-

ly appeared, as Aristotle had done, in an elegant dress, and was very attentive to the graces of elocution. He lived to the advanced age of eighty-five. Towards the close of his life he grew exceedingly infirm, and was carried to the school on a couch. He expressed great regret on account of the shortness of life; and complained that nature had given long life to stags and crows, to whom it is of so little value, and had denied it to man, who, in a longer duration, might have been able to attain the summit of science; but now, as soon as he arrives in sight of it, is taken away.—Theophrastus wrote many valuable works, some of which have come down to us. His principal work of a philosophical, or, rather, ethical character, is entitled *Ἠθικὸν Καρὰκτῆρες* ("Moral Characters"), in thirty chapters. We must take care not to be misled by this title; no moral characters appear in the work, but the author merely traces such as are of a ridiculous stamp. Hence Schneider, one of the editors of Theophrastus, has been led to the opinion, that the Characters of Theophrastus, as we now have them, are only extracts from different moral works published by the philosopher; extracts made at different times and by different persons. He founds this supposition on the unconnected style so prevalent in the "Characters," on the forms of expression which often occur there, and on the following inscription or title of a manuscript: *Ἐκ τῶν Θεοφράστου Καρὰκτῆρων* ("Extracts from the Characters of Theophrastus"). This opinion, however, of Schneider has found many opponents. More unanimity prevails among critics relative to the spuriousness of the preface. Its style, totally different from that of the rest of the work and of the other writings of Theophrastus; the errors in dates; the mention made of his children; in fine, the passage where Theophrastus is made to say that, after having carefully compared the good and the bad, he has believed it to be his duty to commit to writing an account of the mode of life accustomed to be pursued by each, and to arrange them into classes (whereas he merely gives ridiculous characters, and his portraits offer neither vices nor their opposite virtues), all these circumstances combined make a very strong case against the authenticity of the preface in question. The "Characters" of Theophrastus stand very high as a classic work. This rank is due to them for the purity of the style and its great precision, as well as from the exactness and fidelity of the portraits. Theophrastus has sketched with admirable art the various figures which he had proposed to represent on his moral canvass: his designs are executed with a perfect finish; and his numerous imitators, among whom La Bruyère stands most conspicuous, will never conceal from view and produce a forgetfulness of the beauties of their original. We must not, however, bring to the perusal of this work that delicacy of taste, and that general tone of feeling which result from the present relations of society; we must remember that Theophrastus selects his portraits from amid a licentious democracy.—We have also, under the name of Theophrastus, "A book or fragment of Metaphysics" (*Τὸν μετὰ τὰ φυσικὰ ἀποσπασμάτων ἢ βιβλίον δ*).—Theophrastus is also regarded as the author of a treatise, *Περὶ Αἰσθήσεως* ("On Perception"), treating of the senses, the imagination, and the understanding. This work has come down to us, and also a commentary upon it, in the form of a paraphrase, by Priscian of Lydia, who lived in the sixth century.—Porphyry, in his commentary on the Harmonica of Ptolemy, has preserved for us an interesting fragment of the second book of Theophrastus' treatise on Music. A loss which we have much to regret is that of three works of Theophrastus on Laws, which made a kind of appendage to Aristotle's treatise on Politics. The first of those productions was entitled *Περὶ Νόμων* ("Of Laws"); the second, *Νόμων κατὰ στοιχεῖον* ad-

("Twenty-four books of *Laws*, in *Alphabetical order*"); and the third, *Περὶ Νομοθεσιῶν* ("Of Legislators"), in four books. Stobæus cites a fragment of the first work. Athenæus mentions other works also of Theophrastus, on *Flattery, Pleasure, Happiness*, &c., which are now lost.—Independently, however, of his metaphysical, ethical, and political speculations, Theophrastus also turned his attention to Mineralogy and Botany. As the philosopher of Stagira is the father of Zoology, so is Theophrastus to be regarded as the parent of Botany. His vegetable physiology contains some very just arrangements: he had even a glimpse of the sexual system in plants.—Of the numerous works on natural history written by Theophrastus, the following alone remain: 1. *Περὶ φυτῶν ιστορίαι* ("On the History of Plants"), in ten, or, rather, in nine books, for the ancients knew only nine, and the pretended fragment of a tenth book, as found in the manuscripts, is only a repetition of a passage in the ninth. This history of plants is a complete system of ancient botany.—2. *Περὶ φυτικῶν αἰτιῶν* ("Of the causes of Plants"), in ten books, of which only six have come down to us. It is a system of botanical physiology.—3. *Περὶ λίθων* ("Of Stones"). This work proves that, after the time of Theophrastus, mineralogy retrograded.—We have also other treatises of his, on *Odours, Winds, Prognostics of the Weather*, &c., and various fragments of works in natural history, on *Animals that change Colour*, on *Bees*, &c. All these fragments have been preserved for us by Photius.—The best edition of the works of Theophrastus is that of Schneider, *Lips.*, 1818–1821, 5 vols. 8vo. The treatise on Stones has been translated into English by Sir John Hill, and is accompanied by very useful notes, *Lond.*, 1777, 8vo. The best editions of the "Characters" are, that of Casaubon, *L. Bat.*, 1593, 8vo; that of Fischer, *Coburg*, 1763, 8vo; and that of Ast, *Lips.*, 1816, 8vo. This last, critically speaking, is perhaps the best.

THEOPHYLACTUS, I. SIMOCATTA, a Byzantine historian. His history of the reign of the Emperor Maurice is comprehended in eight books, and terminates with the massacre of this prince and his children by Phocas. Casaubon considers this writer one of the best of the later Greek historians. He wrote also other works, some of which have reached us. The best edition of his history is that of Fabrotti, *Paris*, 1648, fol. The best edition of his Physical Questions and Epistles is that of Boissonade, *Paris*, 1835, 8vo.—II. One of the Greek fathers, who flourished A.D. 1070. Dupin observes that his Commentaries are very useful for the literal explanation of the Scriptures; and Dr. Lardner remarks that he quotes no forged writings or apocryphal books of the New Testament, many of which he excludes by his observations on *John*, 1, 31–34, that Christ wrought no miracle in his infancy, or before the time of his public ministry. His works were edited at Venice, 4 vols., 1754 to 1763.

THEOPOLIS, a name given to Antioch because the Christians first received their name there.

THEOPOMPOS, I. a king of Sparta, of the family of the Proclidæ, who distinguished himself by the many new regulations he introduced. He died after a long and peaceful reign, B.C. 723.—II. A Greek historian, a native of Chios, born about B.C. 360. His father, Damastrotus, became an object of strong dislike to his fellow-citizens on account of his attachment to Sparta, and was eventually exiled, together with his son. The latter came to Athens, and there had for an instructor the celebrated Isocrates. At the age of 45, Theopompus returned to his native city, on the recommendation of Alexander the Great; but after the death of that prince he was again driven out. He then retired to Egypt, but was badly received by Ptolemy I., who regarded him as an intriguing and trouble-making man,

and even wished to put him to death. It was in accordance with the advice of Isocrates that Theopompus undertook to write a continuation of the history of Thucydides. He added, in the first place, according to some, an eighth book to the work, which the historian had left incomplete. After this he composed a History of Greece (*Ἑλληνικά*) in eleven books, and an abridgment of Herodotus in two books. He also wrote a history of Philip, father of Alexander the Great, in 58 books. Of these 58 there were still existing 53 in the time of Photius. The patriarch, however, makes us acquainted with the contents merely of the twelfth book, which embraced the history of Ptolemy, king of Egypt. He informs us that the History of Philip contained very many digressions, and that Philip, the king of Macedon, who was defeated by the Romans, having caused all that did not relate to the father of Alexander to be thrown out, there remained merely what would amount in the whole to 16 books. The ancient writers blame Theopompus for a certain harshness and illiberality in his remarks; but Dionysius of Halicarnassus, on the other hand, praises the order and perspicuity that appeared in his works; and he commends, too, the long preparatory toil through which he went before entering on the composition of his work, and the researches which he made, and the pains he took to confer with those who had been eyewitnesses of some of the events that he described.—In speaking afterward of the History of Philip, Dionysius also makes the following remarks in relation to his general manner, which may serve in some degree, perhaps, to explain the charge of harshness and of illiberal feeling accustomed to be brought against this historian: "Not content with relating whatever has passed before the eyes of the world, Theopompus penetrates to the inmost souls of his principal actors, scrutinizes narrowly their most secret intentions, removes the mask from them, and brings forward into open day those vices which their hypocricy had hoped to conceal. Hence some have charged him with calumniating, because he has blamed boldly what deserved to be blamed, and has lessened the glory which surrounded some individuals. In my opinion, however, he has merely done what physicians do, who apply the steel and the fire to those parts that are diseased and gangrenous, in order to save those that are healthy and sound.—As for his diction, it is altogether like that of Isocrates, pure, clear, noble, elevated, flowing, full of sweetness and harmony." (*Dion. Hal., Ep. ad Cn. Pomp.—Op., ed. Reiske*, vol. 6, p. 783.)—It would be wrong in us to oppose to the latter part of this eulogium the criticism of Longinus (§ 42) on a passage of Theopompus, because there is a wide difference between blaming an isolated phrase employed by a writer, and censuring his general style. The reproach uttered by Longinus agrees rather with what the rhetorician Hermogenes also condemned, namely, too great a fondness for digressions, and a relating, sometimes, of things actually silly in their nature. (*De Vet. Script. Censura, ed. Reiske*, vol. 5, p. 429.) Cornelius Nepos has made much use of Theopompus, although he calls him and Timæus two of the most calumniating of men, "*duo maledicentissimi*." (*Vit. Alcib.*, 11, 1.) From an observation, moreover, made by Photius, he would appear to have been a very vain writer, and to have regarded those who had gone before him as not worthy even of the second rank. (*Phot., Cod.*, 176; vol. 1, p. 121, *ed. Bekk.*)—In 1803, Koch announced a critical edition of the fragments of Theopompus as about to appear, in a dissertation entitled "*Prolegomena ad Theopompum Chium*," *Stettini*, 4to. The promised edition, however, has never appeared. Frommel subsequently reunited the fragments of the Abridgment of Herodotus in a dissertation bearing the title "*De Theopompi Chii Epitome Herodoteæ*." It is found in Creuser's *Meletemata*,

vol. 3, p. 135-170. In 1839, the first complete edition of all the fragments appeared from the Leyden press, with notes, a life of Theopompus, &c., by Wichers, 8vo. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 179. — *Hofmann, Lex. Bibliograph.*, vol. 3, p. 743.)

THERA, the most celebrated of the Sporades, situated, according to Strabo, about seven hundred stadia from the Cretan coast, in a northeast direction, and nearly two hundred stadia in circumference. (*Strab.*, 484.) The modern name is *Santorin*. This island was said by mythologists to have been formed in the sea by a clod of earth thrown from the ship *Argo*, and on its first appearance obtained the name of *Calliste*. (*Plin.*, 4, 12.) It was first occupied by some Phoenicians, but subsequently colonized by the Lacedæmonians, who settled there the descendants of the Minys, after they had been expelled from Lemnos by the Pelagi. The colony was headed by *Theras*, a descendant of Cadmus, and maternal uncle of Eurysthenes and Proclus; he gave his name to the island. (*Hærod.*, 4, 147. — *Pausan.*, 3, 1. — *Callim.*, *ep. Strab.*, 347.) Several generations after this event, a colony was led into Africa by Battus, a descendant of the Minys, who there founded the city of Cyrene. (*Hærod.*, 4, 150. — *Pind.*, *Pyth.*, 4, 10.) Thera appears to have been produced by the action of submarine fires. (*Cramer's Anc. Greece*, vol. 3, p. 412, *seqq.*) "Abundant proofs are not wanting," observes Malte-Brun, "as to the existence of an ancient volcano, the crater of which occupied all the basin between *Santorin* and the smaller islands of the group: the mouth of the crater has been partly overthrown, and the aperture enclosed by the accumulation of dust and ashes. The lava, the ashes, and pumice-stone discharged from that volcano have covered part of Thera (*Mém. de Trevoux*, 1715), but the greater portion, which consists of a large bed of fine marble, has never been in any way changed by the action of volcanic fire. (*Townesfort*, vol. 1, p. 321.) Thera is not now, however, covered with ashes and pumice-stones; it is fertile in corn, and produces strong wine and cotton, the latter of which is not, as in the other islands, planted every year. The population amounts to about 10,000, and all the inhabitants are Greeks." (*Malte-Brun, Geogr.*, vol. 6, p. 169.)

THERAMENES, a pupil of Socrates, and afterward one of the Athenian generals along with Alcibiades and Thrasylus. He was appointed by the Lacedæmonians one of the thirty tyrants; but the moderation of his views giving offence to his colleagues, he was condemned to drink hemlock. From the readiness with which Theramenes attached himself to whatever party chanced to be uppermost, he was nicknamed *ὁ κόδορος*, this being an appellation for a sort of sandal, not made right and left, as sandals usually were, but being equally adapted to both feet. (*Suid.*, s. v. *Κόδορος*. — *Blomf. in Mus. Crit.*, vol. 2, p. 212.)

THERAPNE, I. a town of Laconia, southeast of Sparta, and near the Eurotas. It received its name from Therapne, daughter of Lelex. Here were to be seen the temple of Menelaus, and his tomb, as well as that of Helen. Here also was the temple of Pollux, and both this deity and his brother were said to have been born here. Pindar has often connected Therapne with the mention of the Tyndarids. (*Pind.*, *Isth.*, 1, 42. — *Id.*, *Pyth.*, 11, 95. — *Id.*, *Nem.*, 10, 106.) Therapne probably corresponds with the village of *Chrysapha*, about two miles to the southeast of the ruins of Sparta. (*Cramer's Anc. Greece*, vol. 3, p. 212.) — II. A town of Boeotia, between Thebes and the river Asopus, and in a line nearly with Potniæ. (*Strabo*, 409.)

THERAS, a son of Auteson of Lacedæmon, who conducted a colony to Calliste, to which he gave the name of Thera. (*Vid. Thera*.) He received divine honours after death. (*Pausan.*, 3, 1, 15.)

THERASSIA, a small rocky island in the *Ægean*, separated from the northwest coast of Thera by a narrow channel. According to Pliny (4, 12), it was detached from Thera by a convulsion of nature. Therasia still retains its name. (*Bondelmont, Ins. Archipel.*, p. 78, *ed. De Sinner*.)

THERMA, a town of Macedonia, afterward called *Thessalonica*, in honour of the wife of Cassander, and now *Saloniki*. (*Vid. Thessalonica*.)

THERMALICUS SINUS, a large bay setting up between the coast of Pieria and that of Chalcidice, and deriving its name from the city of Therma at its northeastern extremity. It was also called *Macedonicus Sinus*, from its advancing so far into the country of Macedonia. The modern name is the Gulf of *Saloniki*. (*Vid. Thessalonica*.)

THERMÆ (*warm baths*). This term is frequently used in connexion with an adjective: thus, *Thermæ Selenuntis* are the warm baths adjacent to the ancient Selinus, now *Sciaccia*; *Thermæ Himerenses*, those adjacent to Himera on the northern coast of Sicily, now *Termini*, which has also become the modern name for the remains of the ancient city. So, also, in speaking of the warm baths constructed at Rome by various emperors, we read of the *Thermæ Dioclesianæ*, &c.

THERMŌDON, a river of Pontus, rising in the mountains on the confines of Armenia Minor, and pursuing a course nearly due west until it reaches the plain of Thermiscyra, when it turns to the north and empties into the Sinus Amisenus. According to Strabo (548), it was formed by the junction of several minor streams. Apollonius Rhodius makes these rivulets not less than ninety-six in number. (*Arg.*, 2, 972.) Xenophon also describes the Thermodon as a considerable river, not less than three plethra in width, and not easy for an enemy to cross. (*Anab.*, 5, 6, 3.) Dionysius Periegetes affirms that crystal and jasper were found on its banks (v. 773-182). This river, which retains the name of *Thermæ*, is frequently mentioned in the poets, from the circumstance of the Amazons having been fabled to have dwelt at one time on its banks. (*Cramer's Asia Minor*, vol. 1, p. 269, *seqq.* — *Hærod.*, 9, 27. — *Virg.*, *Æn.*, 11, 659. — *Propert.*, 3, 14. — *Plin.*, 6, 3.)

THERMOPYLÆ, a celebrated pass leading from Thessaly into Locris and southern Greece. The word *Thermopylæ* (*Θερμαὶ Πύλαι*, "Warm Gates or Pass") denotes both the narrowness of the defile, which is formed by the sea on one side and the cliffs of Mount *Œta* on the other, and also the vicinity of certain warm springs, still called *Thermæ*, and which are seen to issue principally from two mouths at the foot of the precipices of *Œta*. The following description of *Thermopylæ* is given by Herodotus: "On the western side of the pass is a lofty mountain, so steep as to be inaccessible; on the eastern side are the sea and some marshes. In this defile is a warm spring called *Chytri* (*Χύτροι*) by the inhabitants, where stands an altar dedicated to Hercules. A wall has been constructed by the Phocians to defend the pass against the Thessalians, who came from Thesprotia to take possession of Thessaly, then named *Æolis*. Near *Trachis* the defile is not broader than half a plethrum (50 feet); but it is narrower still both before and after *Thermopylæ*, at the river *Phœnix*, near *Anthele*, and at the village of *Alpeni*." (*Hærod.*, 7, 176.) It was here that Leonidas and his band of heroes withstood the attack of the immense Persian host, and nobly died in defending the pass. Here, too, was fought, at a later day, a battle between the Roman army under *Acilius Glabrio* and the forces of *Antiochus*, in which the latter were entirely routed. (*Vid. Callidromus*. — *Liv.*, 36, 15. — *Plin.*, 4, 7.) — The history of the affair at *Thermopylæ* is as follows: At the time when the congress at the Isthmus resolved on defending the pass in question, the Olympic festival was

THERMOPYLÆ.

near at hand, and also one little less respected among many of the Dorian states, especially at Sparta, that of the Carnean Apollo, which lasted nine days. The danger of Greece did not seem so pressing as to require that these sacred games, so intimately connected with so many purposes of pleasure, business, and religion, should be suspended. And it was thought sufficient to send forward a small force, to bar the progress of the enemy until they should leave the Grecian world at leisure for action. That the northern Greeks might be assured that, notwithstanding this delay, Sparta did not mean to abandon them, the little band that was to precede the whole force of the confederates was placed under the command of her king Leonidas. It was composed of only 300 Spartans, attended by a body of Helots whose numbers are not recorded, 500 men from Tegeæ, and as many from Mantinea, 120 from the Arcadian Orchomenus, and 1000 from the rest of Arcadia. Corinth armed 400, Phlius 200, and Mycenæ 80. Messengers were sent to summon Phocia and the Locrians, whose territory lay nearest to the post which was to be maintained, to raise their whole force. "They were reminded that the invader was not a god, but a mortal, liable, as all human greatness, to a fall: and they were bidden to take courage, for the sea was guarded by Athens and Ægina, and the other maritime states, and the troops now sent were only the forerunners of the Peloponnesian army, which would speedily follow." Hearing this, the Phocians marched to Thermopylæ with 1000 men, and the Locrians of Opus with all the force they could muster. On his arrival in Boeotia Leonidas was joined by 700 Thespians, who were zealous in the cause; but the disposition of Thebes was strongly suspected; her leading men were known to be friendly to the Persians; and Leonidas probably believed that he should be counteracting their intrigues if he engaged the Thebans to take part in the contest. He therefore called upon them for assistance, and they sent 400 men with him; but, in the opinion of Herodotus, this was a forced compliance, which, if they had dared, they would willingly have refused. With this army Leonidas marched to defend Thermopylæ against two millions of men. It was a prevailing belief in later ages—one, perhaps, that became current immediately after the death of Leonidas—that when he sat out on his expedition he distinctly foresaw its fatal issue. And Herodotus gives some colour to the opinion by recording that he selected his Spartan followers from among those who had sons to leave behind them. But Plutarch imagined that, before his departure, he and his little band solemnized their own obsequies by funeral games in the presence of their parents, and that it was on this occasion he spoke of them as a small number to fight, but enough to die. One fact destroys this fiction. Before his arrival at Thermopylæ he did not know of the path over the mountain by which he might be attacked in the rear: the only danger he had before his eyes was one which could not have shaken the courage of any brave warrior, that of making a stand for a few days against incessant attacks, but from small bodies, in a narrow space, where he would be favoured by the ground. The whole pass shut in between the eastern promontory of Ceta, called Callidromus, which towers above it in rugged precipices, and the shore of the Malian Gulf, is four or five miles in length; it is narrowest at either end, where the mountain is said once to have left room only for a single carriage. But between these points the pass first widens and then is again contracted, though not into quite so narrow a space, by the cliffs of Callidromus. At the foot of these rocks, as has already been remarked, a hot sulphureous spring gushes up in a copious stream, and other slenderer veins trickle across the road. This is the pass properly called Thermopylæ. On the side of

THERMOPYLÆ.

the sea it was once guarded no less securely than by the cliffs; for it runs along the edge of a deep morass, which the mud, brought down by the rivers from the vale of the Sperchius, is now continually carrying forward into the gulf, while the part next the road gradually hardens into firm ground, and widens the pass. In very early times the Phocians were in possession of Thermopylæ, and, to protect themselves from the inroads of the Thessalians, had, as already stated, built a wall across the northern entrance, and had discharged the water of the springs to hollow out a natural trench in the road. They were in safety behind this bulwark till the Thessalians discovered a path, which, beginning in a chasm through which a torrent, called the Asopus, descends on the north side of the mountain, winds up a laborious ascent to the summit of Callidromus, and then, by a shorter and steeper track, comes down near the southern end of the pass, where the village of Alpenus once stood. After this discovery the fortification became comparatively useless, and was suffered to go to ruin. It seems wonderful, and would be scarcely credible, if it was not positively asserted by Herodotus, that when the congress at the Isthmus determined to defend Thermopylæ, there was not a man among them who knew of this circuitous track. They ordered the old wall to be repaired; but, when Leonidas arrived, he was informed of the danger which threatened him from the Anopæa, so the mountain pass was named, if it should come to the knowledge of the barbarians; and, on the arrival of the enemy, he posted the Phocians, by their own desire, on the summit of the ridge to guard against a surprise.—The first sight of the Persian host, covering the Trachinian plains, is said to have struck some of the followers of Leonidas with no less terror than their brethren of Artemisium felt at the approach of the hostile armada: the Peloponnesians would have retreated, and reserved their strength for the defence of their own isthmus. But the Phocians and Locrians, who were most interested in checking the progress of the invader, were indignant at the proposal, and Leonidas prevailed on the other allies to stay, and soothed them by despatching messengers to the confederate cities to call for speedy re-enforcement. Xerxes had heard that a handful of men, under the command of a Spartan king, were stationed at this part of the road; but he imagined, it is said, that his presence would have scared them away. He was surprised by the report of a horseman whom he had sent forward to observe their motions, and who, on riding up, perceived the Spartans before the wall, some quietly seated combing their flowing hair, others at exercise. He could not believe Demaratus, who assured him that the Spartans, at least, were come to dispute the pass with him, and that it was their custom to trim their hair on the eve of a combat. Four days passed before he could be convinced that his army must do more than show itself to clear a way for him. On the fifth day he ordered a body of Median and Cissian troops to fall upon the rash and insolent enemy, and to lead them captive into his presence. He was seated on a lofty throne, from which he could survey the narrow entrance of the pass, which, in obedience to his commands, his warriors endeavoured to force. But they fought on ground where their numbers were of no avail, except to increase their confusion when their attack was repulsed: their short spears could not reach the foe: the foremost fell, the hinder advanced over their bodies to the charge: their repeated onsets broke upon the Greeks idly, as waves upon the rock. At length, as the day wore on, the Medians and Cissians, spent with their efforts, and greatly thinned in their ranks, were recalled from the contest, which the king now thought worthy of the superior prowess of his own guards, the ten thousand Immortals. They were led as to a certain and easy victory; the Greeks,

THERMOPYLÆ.

however, stood their ground as before, or, if ever they gave way and turned their backs, it was only to face suddenly about and deal tenfold destruction on their pursuers. Thrice during these fruitless assaults the king was seen to start up from his throne in a transport of fear or rage. The combat lasted the whole day: the slaughter of the barbarians was great; on the side of the Greeks, a few Spartan lives were lost; as to the rest, nothing is said. The next day the attack was renewed with no better success: the bands of the several cities that made up the Grecian army, except the Phocians, who were employed as we have seen, relieved each other at the post of honour; all stood equally firm, and repelled the charge not less vigorously than before. The confidence of Xerxes was now changed to despondence and perplexity.—The secret of the Anopsea could not long remain concealed after it had become valuable. Many tongues, perhaps, would have revealed it: two Greeks, a Carysian, and Corydallus of Anticyra, shared the reproach of this foul treachery; but, by the general opinion, confirmed by the solemn sentence of the Amphictyonic council, which set a price upon his head, Ephialtes, a Melian, was branded with the infamy of having guided the barbarians round the fatal path. Xerxes, rejoiced at the discovery, ordered Hydarnes, the commander of the Ten Thousand, with his troops, to follow the traitor. They set out at nightfall: as day was beginning to break, they gained the brow of Callidromus, where the Phocians were posted: the night was still, and the universal silence was first broken by the trampling of the invaders on the leaves with which the face of the woody mountain was thickly strewed. The Phocians started from their couches and ran to their arms. The Persians, who had not expected to find an enemy on their way, were equally surprised at the sight of an armed band, and feared lest they might be Spartans; but when Ephialtes had informed them of the truth, they prepared to force a passage. Their arrows showered upon the Phocians, who, believing themselves the sole object of attack, retreated to the highest peak of the ridge, to sell their lives as dearly as they could. The Persians, without turning aside to pursue them, kept on their way, and descended towards Alpenus. Meanwhile, deserters had brought intelligence of the enemy's motions to the Grecian camp during the night, and their report was confirmed at daybreak by the sentinels who had been stationed on the heights, and now came down with the news that the barbarians were crossing the ridge. Little time was left for deliberation: opinions were divided as to the course that prudence prescribed or honour permitted. Leonidas did not restrain, perhaps encouraged, those of the allies who wished to save themselves from the impending fate; but for himself and his Spartans he declared his resolution of maintaining the post which Sparta had assigned them to the last. All withdrew except the Thespians and the Thebans. The Thespians remained from choice, bent on sharing his glory and his death. We should willingly believe the same of the Thebans, if the event did not seem to prove that their stay was the effect of compulsion. Herodotus says that Leonidas, though he dismissed the rest because their spirit shrank from danger, detained the Thebans as hostages, because he knew them to be disaffected to the cause of freedom; yet, as he was himself certain of perishing, it is equally difficult to understand why and how he put this violence on them; and Plutarch, who observes the inconsistency of the reason assigned by Herodotus, would have triumphantly vindicated the honour of the Thebans, if he could have denied that they alone survived the day. Unless we suppose that their first choice was on the side of honour, their last, when death stared them in the face, on the side of prudence, we must give up their conduct

THERMOPYLÆ.

and that of Leonidas as an inscrutable mystery.—Megistias, an Acarnanian soothsayer, who traced his lineage to the ancient seer Melampus, is said to have read the approaching fate of his companions in the entrails of the victims before any tidings had arrived of their danger. When the passage was confirmed, Leonidas pressed him to retire: a proof, Herodotus thinks, that the Spartan king did not wish to keep any one who desired to go. Megistias, imitating the example of the heroic prophet Theoclus, who, after predicting the fall of Ira to Aristomenes, refused to survive the ruin of his country, would not quit the side of Leonidas; but he sent away his son, an only one, who had accompanied him, that the line of Melampus might not end with him. Leonidas would also, it is said, have saved two of his kinsmen, by sending them with letters and messages to Sparta; but the one said he had come to bear arms, not to carry letters; and the other, that his deeds would tell all that Sparta wished to know.—Before Hydarnes began his march, Ephialtes had reckoned the time he would take to reach the southern foot of the mountain, and Xerxes had, accordingly, fixed the hour when he would attack the Greeks in front. It was early in the forenoon when the Ten Thousand had near finished their round, and the preconcerted onset began. Leonidas, now less careful to husband the lives of his men than to make havoc among the barbarians, no longer confined himself, as before, within the pass, but, leaving a guard at the wall, sallied forth and charged the advancing enemy. His little band, reckless of everything but honour and vengeance, made deep and bloody breaches in the ranks of the Persians, who, according to an Oriental custom, were driven into the conflict by the lash of their commanders. Many perished in the sea, many were trampled under foot by the throng that pressed on them from behind: yet the Spartans too were thinned, and Leonidas himself died early. The fight was hottest over his body, which was rescued after a hard struggle, and the Greeks four times turned the enemy. At length, when most of their spears were broken, and their swords blunted with slaughter, word came that the band of Hydarnes was about to enter the pass. Then they retreated to the wall, and pressed on to a knoll on the other side, where they took up their last stand. The Thebans, however, did not return with them, but threw down their arms and begged for quarter. This, it is said, the greater part obtained: Herodotus heard a story, about which Plutarch is, with good reason, incredulous, that they were afterward all branded like runaway slaves; but it is not denied that they placed themselves at the mercy of the barbarians. The Persians rushed forward unresisted, broke down the wall, and surrounded the hillock where the little remnant of the Greeks, armed only with a few swords, stood a butt for the arrows, the javelins, and the stones of the enemy, which at length overwhelmed them. Where they fell they were afterward buried; their tomb, as Simonides sang, was an altar; a sanctuary, in which Greece revered the memory of her second founders. (*Diod. Sic.*, 11, 11.) The inscription of the monument raised over the slain, who died from first to last in defence of the pass, recorded that four thousand men from Peloponnesus had fought at Thermopylæ with three hundred myriads. We ought not to expect accuracy in these numbers: the list in Herodotus, if the Læcian force is only supposed equal to the Phocian, exceeds six thousand men: the Phocians, it must be remembered, were not engaged. But it is not easy to reconcile either account with the historian's statement, that the Grecian dead amounted to four thousand, unless we suppose that the Helots, though not numbered, formed a large part of the army of Leonidas. The lustre of his achievement is not diminished by their presence. He himself and his Spartans no doubt considered their

persevering stand in the post intrusted to them, not as an act of high and heroic devotion, but of simple and indispensable duty. Their spirit spoke in the lines inscribed upon their monument, which bade the passing traveller tell their countrymen that they had fallen in obedience to their laws. How their action was viewed at Sparta may be collected from a story which cannot be separated from the recollection of this memorable day. When the band of Leonidas was nearly enclosed, two Spartans, Eurytus and Aristodemus, were staying at Alpenus, having been forced to quit their post by a disorder which nearly deprived them of sight. When they heard the tidings, the one called for his arms, and made his helot guide him to the place of combat, where he was left, and fell. But the other's heart failed him, and he saved his life. When he returned to Sparta he was shunned like a pestilence: no man would share the fire of his hearth with him, or speak to him; and he was branded with the name of "the trembler Aristodemus" (ὁ τρέσας Ἀριστόδημος). According to another account, both these Spartans had been despatched from the camp as messengers, and there being sufficient time for both to return, Eurytus did so, but Aristodemus lingered on the way.—The Persians are said to have lost at Thermopylæ 20,000 men: among them were several of royal blood. To console himself for this loss, and to reap the utmost advantage from his victory, Xerxes sent over to the fleet, which, having heard of the departure of the Greeks, was now stationed on the northern coast of Eubœa, and by public notice invited all who were curious to see the chastisement he had inflicted on the men who had dared to defy his power. That he had previously buried the greater part of his own dead seems natural enough; and such an artifice, so slightly differing from the universal practice of both ancient and modern belligerents, scarcely deserved the name of a stratagem. He is said also to have mutilated the body of Leonidas; and, as this was one of the foremost which he found on a field that had cost him so dear, we are not at liberty to reject the tradition, because such ferocity was not consistent with the respect usually paid by the Persians to a gallant enemy. To cut off the head and right arm of elain rebels was a Persian usage. (*Plut., Vit. Artax.*, c. 13.—*Strab.*, 733.—*Herod.*, 7, 206, *seqq.*—*Thirlwall's Hist. of Gr.*, vol. 2, p. 232, *seqq.*)—According to modern travellers, the warm springs at Thermopylæ are about half way between *Bodonitza* and *Zeitoun*. They issue principally from two mouths at the foot of the limestone precipices of Ceta. The temperature, in the month of December, was found to be 111° of Fahrenheit. Dr. Holland found it to be 103° or 104° at the mouth of the fissures. The water is very transparent, but deposits a calcareous concretion (carbonate of lime), which adheres to reeds and sticks, like the waters of the Anio at Tivoli, and the sulphureous lake between that place and Rome. A large extent of surface is covered with this deposit. It is impregnated with carbonic acid, lime, muriate of soda, and sulphur. The ground about the springs yields a hollow sound like that within the crater of the Solfaterra near Naples. In some places Dr. Clarke observed cracks and fissures filled with stagnant water, through which a gaseous fluid was rising in large bubbles to the surface, its foetid smell bespeaking it to be sulphureted hydrogen. The springs are very copious, and immediately form several rapid streams running into the sea, which is apparently about a mile from the pass. Baths were built here by Herodes Atticus. The defile or strait continues for some distance beyond the hot springs, and then the road, which is still paved in many places, bears off all at once across the plain to Zeitoun, distant three hours from Thermopylæ. Near the springs there are faint traces of a wall and circular tower, composed of a thick mass of small stones, and

apparently not of high antiquity. The foot of the mountain, however, Mr. Dodwell says, is so covered with trees and impenetrable bushes as to hide any vestiges which may exist of early fortifications. The wall, of which mention has more than once been made by us, was, at a later day, renewed and fortified by Antiochus when defending himself against the Romans; and was afterward restored by Justinian, when that monarch thought to secure the tottering empire by fortresses and walls: he is stated also to have constructed cisterns here for the reception of rain-water. The question is, whether this be the site of the ancient wall, as Dr. Holland and Mr. Dodwell suppose, or whether the spring referred to by Herodotus be not the fountain mentioned by Dr. Clarke, who describes the wall, not as traversing the marsh, but as extending along the mountainous chain of Ceta from sea to sea. The cisterns built by Justinian would hardly be in the marshy plain, but must be looked for within the fortified pass. Formidable, however, as the defile of Thermopylæ may seem, it has never opposed an effectual barrier to an invading army; the strength of these gates of Greece being rendered vain by the other mountain routes which avoid them. "The Persians," says Procopius, "found only one path over the mountains; now there are many, and large enough to admit a cart or chariot." A path was pointed out to Dr. Clarke to the north of the hot springs, which is still used by the inhabitants in journeying to Salona. After following this path to a certain distance, another road branches from it towards the southeast, according to the route pursued by the Persians. Dr. Holland ascended Mount Ceta by "a route equally singular and interesting, but difficult, and not free from danger." When the Gauls under Brennus invaded Greece, the treacherous discovery made to him of a path through the mountains compelled the Greeks to retreat, to prevent their being taken in rear. Antiochus was in like manner forced to retreat with precipitation, on seeing the heights above the pass occupied by Roman soldiers, who, under the command of M. Porcius Cato, had been sent round to seize these positions. In the reign of Justinian the army of the Huns advanced to Thermopylæ, and discovered the path over the mountains. When Bajazet entered Greece towards the close of the fourteenth century, there appears to have been little need of these artifices: a Greek bishop is stated to have conducted the Mohammedan conquerors through the pass to enslave his country. During the late revolution, Thermopylæ never opposed any serious barrier against the Turkish forces. The passes of Calidromus and Cnemis were disputed on one occasion with success by a body of Armatolæ under Odysseus; but the foe were afterward repeatedly suffered to cross the ridges of Othrys and Ceta without opposition.

Thermus or Thermum, an unwall'd city of Ætolia, northeast of Stratos, regarded as the capital of the country. It is supposed by Mannert to have derived its name from some warm springs in the neighbourhood, and Polybius (5, 7) speaks of it as *τόπον ἐν τοῖς πεποις*. Its situation among the mountains rendered it, notwithstanding the want of walls, a place very difficult of access, and hence it was regarded as a kind of citadel for all Ætolia. It was here that the assemblies for deciding the elections of magistrates were held, as well as the most splendid festival and commercial meetings. Hence the place was stored, not only with abundance of provisions and the necessaries of life, but with the most costly furniture, and with utensils of every kind adapted for entertainments. Philip III. of Macedon surprised the place by a rapid march, and obtained great booty, although many of the more valuable articles were either carried off or destroyed by the inhabitants. (*Polyb.*, 5, 9.) In the pillage of the town, the Macedonians did not spare

even the temples; but, in revenge for the excesses committed by the Ætolians at Dium and Dodona, defaced the statues, which amounted to more than two thousand, set fire to the porches, and finally razed the buildings themselves to the ground. They found also in Thermus a quantity of eggs, of which they selected the most costly to carry away, but the greater part they destroyed, to the number of 15,000 complete suits of armour. In like manner, whatever was not worthy of removal, was consumed in heaps before the camp. All these facts attest the size and opulence of the place; of which, however, so little is known, that, with the exception of Strabo and Polybius, its name occurs in no ancient author. Philip subsequently made another attack upon the town, and destroyed all that had been spared before. (*Polyb., de virt. et vit., c. 11.*)—Under the Roman sway, when the national assemblies of the Ætolians had ceased to be held, Thermus became speedily forgotten in history. (*Mannert, Geogr., vol. 8, p. 111—Cramer's Anc. Greece, vol. 2, p. 87.*)

THESSANDRA, a son of Polynices and Argia. He was one of the Epigoni, and, after the capture of Thebes, received the city from the hands of his victorious fellow-chieftains. (*Pausan., 9, 8.—Heyne, ad Apollod., 3, 7, 4.*) At a subsequent period, when already advanced in years, he accompanied the Greeks to the Trojan war, but was slain on the shores of Mysia by Telephus. (*Dict. Crét., 2, 2.—Heyne, ad Virg., Æn., 2, 261.—Pind., Ol., 2, 76.—Schol. ad Pind., l. c.*)

THESSIFRIS, one of the Greeks in the army before Troy. Homer describes him as equally deformed in person and in mind. Such was his propensity to indulge in contumelious language, that he could not abstain from directing it against not only the chiefs of the army, but even Agamemnon himself. He ultimately fell by the hand of Achilles, while he was ridiculing the sorrow of that hero for the slain Penthesilea. (*Hom., Il., 2, 212, seqq.*)

THESSIDÆ, a patronymic given to the Athenians from Theseus, one of their kings. (*Virg., G., 2, 383.*)

THESEUS (two syllables), king of Athens, and son of Ægeus by Æthra, the daughter of Pittheus, monarch of Trœzene, was one of the most celebrated heroes of antiquity. He was reared in the palace of his grandfather; and, when grown to the proper age, his mother led him to the rock under which his father had deposited his sword and sandals, and he removed it with ease and took them out. He was now to proceed to Athens, and present himself to Ægeus. As, however, the roads were infested by robbers, his grandfather Pittheus pressed him earnestly to take the shorter and safer way over the Saronic Gulf; but the youth, feeling in himself the spirit and the soul of a hero, resolved to signalize himself like Hercules, with whose fame all Greece now rang, by destroying the evil-doers and the monsters that oppressed and ravaged the country; and he determined on the more perilous and adventurous journey by land. On his way to Athens he met with many adventures, and destroyed Periphatas, Sinis, Sciron, Procrustes, and also the monstrous sow Phœa, which ravaged the country in the neighbourhood of Crommyon. Having overcome all the perils of the road, Theseus at length reached Athens, where new dangers awaited him. He found his father's court all in confusion. The Pallantides, or sons and grandsons of Pallas, the brother of Ægeus, had long seen with jealousy the sceptre in the hands of an old man, and now meditated wresting it from his feeble grasp. Thinking, however, that his death could not be very remote, they resolved to wait for that event; but they made no secret of their intentions. The arrival of Theseus threatened to disconcert their plan. They feared that if this young stranger should be received as a son of the old king, he might find in him a protector and avenger; and they resolved to poison his mind against him. Their plot so far suc-

ceeded that Ægeus was on the point of sacrificing his son, when he recognised him, and then acknowledged him in the presence of all the people. The Pallantides had recourse to arms, but Theseus defeated and slew them. Medea, it is also said, who was married to Ægeus, fearing the loss of her influence when Theseus should have been acknowledged by his father, resolved to anticipate that event; and, moved by her calumnies, Ægeus was presenting a cup of poison to his son, when the sight of the sword left with Æthra discovered to him who he was. The bull which Hercules had brought from Crete was now at Marathon, and the country was in terror of his ravages. Theseus went in quest of him, overcame, and exhibited him in chains to the astonished Athenians, and then sacrificed the animal to Apollo Delphinus. The Athenians were at this period in deep affliction on account of the tribute which they were forced to pay to Minos, king of Crete. (*Vid. Androgeus and Minotaurus.*) Theseus resolved to deliver them from this calamity, or die in the attempt. Accordingly, when the third time of sending off this tribute came, and the youths and maidens were, according to custom, drawn by lot to be sent, in spite of the entreaties of his father to the contrary he voluntarily offered himself as one of the victims. The ship departed, as usual, under black sails, which Theseus promised his father to change for white ones in case of his returning victorious. When they arrived in Crete, the youths and maidens were exhibited before Minos; and Ariadne, the daughter of the king, who was present, became deeply enamoured of Theseus, by whom her love was speedily returned. She furnished him with a clew of thread, which enabled him to penetrate in safety the windings of the labyrinth till he came to where the Minotaur lay, whom he caught by the hair and slew. He then got on board with his companions, and sailed for Athens. Ariadne accompanied his flight, but was abandoned by him on the isle of Dia or Naxos. (*Vid. Ariadne.*) Before Theseus returned to Athens, he sailed to Delos to pay his vow; for, ere setting out on his perilous expedition, he had made a vow to send annually, if successful, to the sacred island a ship with gifts and sacrifices. (*Vid. Delia II.*) He also consecrated in Delos a statue of Venus, made by Dædalus, on account of the aid she had given him. He, moreover, to commemorate his victory, established there a dance, the evolutions of which imitated the windings of the labyrinth. (*Compare Hom., Il., 18, 590, seqq.*) On approaching the coast of Attica, Theseus forgot the signal appointed by his father, and returned under the same sails with which he had departed; and the old king, thinking he was deprived of his newly-found son, destroyed himself. (*Vid. Ægeus.*) The hero now turned his thoughts to legislation. The Attic territory had been divided by Cecrops into twelve demi or boroughs, each of which had its own government and chief magistrate, and was almost wholly independent. The consequence was, frequent and sanguinary wars arose among them. Nothing but pressing external danger forced them to union, which was again dissolved as soon as the storm was over. Theseus therefore invited not merely the people of Attica, but even strangers, to come and establish themselves at Athens, then nothing but a small settlement on a rock. By his prudence and his authority he induced the heads of boroughs to resign their independent power, and intrust the administration of justice to a court, which should sit constantly at Athens, and exercise jurisdiction over all the inhabitants of Attica. He abolished the previous division of the people of Attica into four tribes, and substituted that of a distribution into three classes, the Nobles, the Husbandmen, and the Artisans (*Εὐρατρίδαι, Γεωργοί, and Δημοσργοί*). This object he is said to have accomplished partly by force, partly by persuasion. With the lower classes,

we read, he found no difficulty; but the powerful men were only induced to comply with his proposals by his promise that all should be admitted to an equal share of the government, and that he would resign all his royal prerogatives except those of commanding in war and of watching over the laws. To the nobles, therefore, he reserved all the offices of state, with the privilege of ordering the affairs of religion, and of interpreting the laws both human and divine. The result of these and other regulations was the increase of the city and of the population in general. Thucydides fixes on this as the epoch when the lower city was added to the ancient one, which had covered, as we have remarked, little more than the rock that afterward became the citadel. And hence there may seem to have been some foundation for Plutarch's statement, that Theseus called the city Athens, if this name properly signified the whole enclosure of the Old and New Town.—As a farther means of uniting the people, Theseus established numerous festivals, particularly the Panathenæa, solemnized with great splendour every fifth year, in commemoration of this union of the inhabitants of Attica. Theseus firmly established the boundaries of the Attic territory, in which he included Megaris, and set up a pillar on the Isthmus of Corinth to mark the limits of Attica and the Peloponneseus. These civic cares did not prevent Theseus from taking part in military enterprises: he accompanied Hercules in his expedition against the Amazons, who then dwelt on the banks of the Thermodon; and he distinguished himself so much in the conflict, that Hercules, after the victory, bestowed on him, as the reward of his valour, the hand of the vanquished queen. (*Vid. Antiope.*) When the Amazons afterward, in revenge, invaded the Attic territory, they met with a signal defeat from the Athenian prince. (*Vid. Amazones.*) Theseus was also a sharer in the dangers of the Calydonian hunt; he was one of the adventurous band who sailed in the Argo to Colchis; and he aided his friend Pirithoüs and the Lapithæ in their conflict with the Centaurs. The friendship between him and Pirithoüs was of a most intimate nature, yet it had originated in the midst of arms. (*Vid. Pirithoüs.*) Like faithful comrades, they aided each other in every project. Each was ambitious in love, and would possess a daughter of the gods. Theseus, in whose favour the lot had fallen, carried off, with the assistance of his friend, the celebrated Helen, daughter of Leda, then a child of but nine years, though already of surpassing loveliness, and placed her under the care of his mother Æthra, at Aphidnæ, whence she was subsequently rescued by her brothers Castor and Pollux. He then prepared to aid his friend in a bolder and more perilous attempt, the abduction of Proserpina from the palace of Pluto; an attempt which resulted in the imprisonment of both by the monarch of Hades. From this confinement Theseus was released by Hercules; but Pirithoüs remained ever a captive. (*Vid. Pirithoüs.*) After the death of Antiope, who had borne him a son named Hippolytus, Theseus married Phædra, the daughter of Minos, and sister of Ariadne. Hippolytus lost his life in consequence of a false charge preferred against him by his stepmother; Phædra ended her days by her own hand; and Theseus, when too late, learned the innocence of his son. (*Vid. Hippolytus.*)—The invasion of Attica by Castor and Pollux, for the recovery of their sister Helen, and an insurrection of the Pallantidæ, brought on Theseus the usual fate of all great Athenians—exile. He voluntarily retired to Lycomedes, king of the island of Scyros, and there he met with his death, either by accident or by the treachery of his host; for, ascending, with Lycomedes, a lofty rock, to take a view of the island, he fell or was pushed off by his companion, and lost his life by the fall. The Athenians honoured his memory by feasts and temples, placed him among the gods,

and at a later day obtained his bones from the island of Scyros, and interred them beneath the soil of Attica. (*Keightley's Mythology*, p. 387, *seqq.*—*Plut., Vit. Thea.*)—Theseus, whose name signifies the *Orderer* or *Regulator* (ὄρεσς, from ὄρεω, *now*, "to place" or "establish"), seems rather to indicate a period than an individual, though it is very possible that the name may have been borne by one who contributed the largest share, or put the finishing hand, to the change which is commonly considered as his work. Theseus, indeed, is represented by the ancients in quite an ambiguous light; as, on the one hand, the founder of a government which was, for many centuries after him, rigidly aristocratical; and, on the other hand, as the parent of the Athenian democracy. If we make due allowance for the exaggerations of poets or rhetoricians, who adorn him with the latter of these titles in order to exalt the antiquity of the popular institutions of later times, we shall perhaps find that neither description is entirely groundless, though the former is more simply and evidently true. His institutions were aristocratical, because none were then known of any other kind. The effect of the union would even be, in the first instance, to increase the influence of the noble class, by concentrating it in one spot; and hence it proved too powerful for both the king and the people. In this sense we may say with Plutarch, that Theseus gained the assent of the great men to his plan by surrendering his royal prerogatives, which they shared equally among them. The king was no more than the first of the nobles; the four kings of the tribes (φύλοβασιλεῖς.—*Pollux*, 8, 111), all chosen from the privileged class, were his constant assessors, and acted rather as colleagues than as counsellors. The principal difference between them and him appears to have consisted in the duration of their office, which was probably never long enough to leave them independent of the body from which they were taken and to which they returned.—But there was also a sense in which Theseus might, without impropriety, be regarded as the founder of the Athenian democracy, both with respect to the tendency and remote consequences, and to the immediate effect, of the institutions ascribed to him. The incorporation of several scattered townships in one city, such as took place in Attica, was in many, perhaps in most, parts of Greece the first stage in the growth of a free commonality, which, thus enabled to feel its own strength, was gradually encouraged successfully to resist the authority of the nobles. And hence, in later times, the dismemberment of a capital, and its repartition into a number of rural communities, was esteemed the surest expedient for establishing an aristocratical government. (*Thirlwall's Hist. of Greece*, vol. 2, p. 9, *seqq.*)—Regarded as the patron-hero of that people of Greece among whom literature flourished most, Theseus is presented to us under a more historic aspect than the other heroes of mythology. Though his adventures are evidently founded on those of Hercules, whom he is said to have emulated, we are struck by the absence of the marvellous in them: indeed, the exploits of Theseus are generally such effects as would be produced in historical times by the course of events in the formation of a polity: such, at least, are his achievements in and about Attica. Theseus yielded few subjects, therefore, to the Attic dramatists. When they brought him on the stage, it was hardly ever as the principal character of the piece. He always, however, appears as the model of a just and moderate ruler, the example of a strict obedience to the dictates of law and equity, the protector of the suppliant, the scourge of the evil-doer, and the author of wise and good regulations. (*Keightley, l. c.*)

ΤΗΣΜΟΘΗΤΗΣ, a name given to the six remaining archons at Athens, after the chief archon, the Basileus or King-Archon, and the Polemarch. (*Vid. Archontes.*)

THESSALIA or **THESSALIA**, a town of Boeotia, forty stadia from Ascræ, according to Strabo, and near the foot of Helicon, looking towards the south and the Crætan Gulf. Its antiquity is attested by Homer, who names it in the catalogue of Boeotian towns. (*Il.*, 2, 498.) The Thessians are worthy of a place in history for their brave and generous conduct during the Persian war. When the rest of Boeotia basely submitted to Xerxes, they alone refused to tender earth and water to his deputies. The troops also under Leonidas, whom they sent to aid the Spartans at Thermopylae, chose rather to die at their posts than desert their commander and his heroic followers. (*Herod.*, 7, 182 et 232.) Their city was, in consequence, burned by the Persians after it had been evacuated by the inhabitants, who retired to the Peloponnesus. (*Herod.*, 8, 50.) A small body of these, however, fought at Platæa under Pausanias. (*Herod.*, 9, 31.) The Thessians distinguished themselves also in the battle of Delium against the Athenians, being nearly all slain at their post. (*Thucyd.*, 4, 96.) The Thebans afterward basely took advantage of this heavy loss to poll down the walls of their city and bring it under subjection, on pretext of their having favoured the Athenians. (*Thucyd.*, 4, 133.) They subsequently made an attempt to recover their independence; but, failing in this enterprise, many of them sought refuge at Athens. (*Thucyd.*, 6, 95.) Thessia was occupied by the Lacedæmonians at the same time that they seized upon the citadel of Thebes. (*Xen., Hist. Gr.*, 5, 4, 43.)—The celebrated courtesan Phryne was born at Thessia. It is mentioned, that on her having received, as a present from Praxiteles, a beautiful statue of Cupid, she caused it to be erected in her native city, which added greatly to its prosperity, from the influx of strangers who came to view this masterpiece of art. (*Strabo*, 410.—*Athen.*, 13, 59.) Pausanias affirms, that this celebrated statue was sent to Rome by Caligula, but was afterward restored to Thessia by Claudius. Nero again removed it to Rome, where it was destroyed by fire. (*Pausan.*, 9, 26.) Pliny, however, asserts that it still existed in his day in the schools of Octavia. (*Plin.*, 36, 5.)—It is now pretty well ascertained, by the researches of recent travellers, that the ruins of Thessia are occupied by the modern *Eremo Castro*. Sir W. Geill remarks, that "the plan of the city is distinctly visible. It seems a regular hexagon, and the mound occasioned by the fall of the wall is perfect." (*Itin.*, p. 119.—*Cramer's Ancient Greece*, vol. 2, p. 208, seqq.)

THESSIIDÆ, the offspring of Hercules by the fifty daughters of Thessius. On attaining to manhood, some of them were sent, by their father's directions, to Thebes in Boeotia, but the greater part as a colony to Sardinia. (*Apollod.*, 2, 7, 6.—*Heyne ad Apollod.*, l. c.—*Diod. Sic.*, 4, 29.—*Pausan.*, 10, 17.)

THESSIADÆ, i. the fifty daughters of Thessius, mothers of the Thessians by Hercules. (*Apollod.*, 2, 4, 10.)—II. An appellation given to the Muses from Thessia, near which was Helicon, one of the mountains sacred to them. (*Vid. Muse*.)

THESSIS, an early Greek dramatic poet, generally regarded as the inventor of tragedy. He was born at Icaria, a Diacrian demus or borough, at the beginning of the sixth century B.C. His birthplace derived its name, according to tradition, from the father of Erigone (*Steph. Byz.*, s. v. *Ἰκαρία*.—*Hygin.*, fab. 130), and had always been a seat of the religion of Bacchus; and the origin of the Athenian tragedy and comedy has been confidently referred to the drunken festivals of the place (*Athenæus*, 3, p. 40): indeed, it is not improbable that the name itself may point to the old mimetic exhibitions which were common there. (*Wecker, Nachtrag*, p. 232.) An account of the improvements introduced by Thessis will be found under another article. (*Vid. Thestrum*.)

THESSIVS, king of Thessia, and father of the Thessians. (*Apollod.*, 2, 4, 10.) The name is sometimes erroneously written Thestius. (Consult the remarks of *Heyne*, *not. crit.*, ad *Apollod.*, 2, 7, 8.)

THESPROTIA, a district of Epirus, along the coast opposite to Corcyra, and extending also some distance inland. Of all the Epirotic nations, the Thesproti may be considered as the most ancient. This is evident from the circumstance of their being alone noticed by Homer, while he omits all mention of the Molossians and Chaonians. (*Od.*, 14, 315.) Herodotus also affirms (7, 176) that they were the parent stock whence descended the Thessalians, who expelled the Æolians from the country afterward known by the name of Thessaly. Thesprotia, indeed, appears to have been in remote times the great seat of the Pelægic nation, whence they disseminated themselves over several parts of Greece, and sent colonies to Italy. (*Herod.*, 2, 56.—*Strabo*, 337.) Even after the Pelægic name had become extinct in these two countries, the oracle and temple of Dodona, which they had established in Thesprotia, still remained to attest their former existence in that district.—We must infer from the passage of Homer which has been referred to, that the government of Thessaly was at first monarchical. How long this continued is not apparent. Some change must have taken place prior to the time of Thucydides, who assures us that neither the Thesproti nor Chaones were subject to kings. (*Thucyd.*, 2, 90.) Subsequently we may, however, suppose them to have been included under the dominion of the Molossian princes. It were as needless to attempt to define the limits of ancient Thessaly as those of Chaonia: we must therefore be content with ascertaining that it was mainly situated between the rivers Thyamis (*Calama*) and Acheron (*Souli*), while it extended beyond the sources of the former to the banks of the Aoiæ. (*Cramer's Anc. Greece*, vol. 1, p. 197.)

THESSALIA, a country of Greece, bounded on the north by the Cambanian Mountains, extending from Pindus to Olympos, and separating it from Macedonia; on the west by the chain of Pindus, dividing it from Epirus; on the south by Mount Ceta, and on the east by the Ægean Sea. It seems to have been the general opinion of antiquity, founded on very early traditions, that the great basin of Thessaly formed by the mountains just specified was at some remote period covered by the waters of the Peneus and its tributary rivers, until some great revolution of nature had rent asunder the gorge of Tempe, and thus afforded a passage to the pent-up streams. This opinion, which was first reported by Herodotus, in his account of the celebrated march of Xerxes (7, 129), is again repeated by Strabo, who observes, in confirmation of it, that the Peneus is still exposed to frequent inundations, and also that the land in Thessaly is higher towards the sea than towards the more central parts. (*Strabo*, 430.)—According to the same geographer, this province was divided into four districts, distinguished by the name of Phthiotia, Estimotia, Thessaliotia, and Pelægiotia. In his description, however, of these, he appears to have no room for Thessaliotia, which is, in fact, rarely acknowledged by the writers of antiquity; though we cannot doubt the propriety of Strabo's division into tetrarchies, as it derives confirmation from Harpocration (*s. v. Τετραρχία*) and the scholiast to Apollonius Rhodius. (*Argon.*, 3, 1089.)—There is hardly any district in Greece for which nature seems to have done so much as for Thessaly. It may with justice be called the land of the Peneus, which, descending from Pindus, flowed through it from west to east. A multitude of tributary streams poured from the north and the south into this river. No other district had so extensive an internal navigation; which, with a little assistance from art, might have been carried to all its parts. Its fruitful soil was fitted alike

for pasturing and the cultivation of corn; its coasts, especially the Sinus Pagassæus, afforded the best harbours for shipping; nature seemed hardly to have left a wish ungratified. It was in Thessaly that the tribe of the Hellenes, according to tradition, first applied themselves to agriculture; and thence its several branches spread over the more southern lands. (*Vid. Hellas.*) Almost all the names of its towns recall some association connected with the primitive history and heroic age of the nation.—Early traditions, preserved by the Greek poets and other writers, ascribe to Thessaly the more ancient names of Pyrrha, Æmonia, and Æolis. (*Rhian., ap. Schol. in Apoll. Rhod., 3, 1089.—Steph. Byz., s. v. Αἰωνία.—Herod., 7, 176.*) Passing over the two former appellations, which belong rather to the age of mythology, the latter may afford us matter for historical reflections, as referring to that remote period when the plains of Thessaly were occupied by the Æolian Pelasgi, to whom Greece was probably indebted for the first dawnings of civilization, and the earliest cultivation of her language. (*Strabo, 220.*) This people originally came, as Herodotus informs us, from Thesprotia (*Herod., 7, 176.—Strab., 444*); but how long they remained in possession of the country, and at what precise period it assumed the name of Thessaly, cannot, perhaps, now be determined. In the poems of Homer it never occurs, although the several principalities and kingdoms of which it is composed are there distinctly enumerated and described, together with the different chiefs to whom they were subject: thus Hellas and Phthia are assigned to Achilles; the Melian and Pagassæan territories to Proteilaus and Eumelus; Magnesia to Philoctetes and Eurypylus; Estimotie and Pelasgia to Medon and the sons of Æsculapius, with other petty leaders. It is from Homer, therefore, that we derive the earliest information relative to the history of this fairest portion of Greece. This state of things, however, was not of long continuance; and a new constitution, dating probably from the period of the Trojan expedition, seems to have been adopted by the common consent of the Thessalian states. They agreed to unite themselves into one confederate body, under the direction of one supreme magistratè or chief, distinguished by the title of Tagus (*Τάγος*), and elected by the consent of the whole republic. The details of this federal system are little known; but Strabo assures us that the Thessalian confederacy was the most considerable, as well as the earliest, society of the kind established in Greece. (*Strab., 429.*) How far its constitution was connected with the celebrated Amphictyonic council, it seems impossible to determine, since we are so little acquainted with the origin and history of that ancient assembly. There can be little doubt, however, that this singular coalition, which embraced matters of a political as well as a religious nature, first rose among the states of Thessaly, as we find that the majority of the nation who had votes in the council were either actually Thessalians, or connected in some way with that part of Greece. This mode of government, however, seems to have succeeded as little in Thessaly as in the other Hellenic republics where it was adopted; and that province, which, from its local advantages, ought to have ranked among the most powerful and leading states of Greece, we find, if we except a period of brilliant but momentary splendour, to have been one of the most weak and insignificant. We learn from Herodotus, that when Xerxes mediated the invasion of Greece, he was encouraged in the design by the Aleuada, whom the historian terms kings of Thessaly, but who, probably, like the Pisistratids, had only usurped the regal power, and, upon being deprived of their authority, sought the aid of the Persian monarch to recover their lost dominion. (*Herod., 7, 6.*) It is evident that the Thessalian nation did not concur in their projects, as we find they applied for assistance in this

emergency to the rest of Greece; but, as it was not deemed expedient to join forces against the common enemy, from the impossibility of making any effectual resistance to the north of Thermopylæ, the Thessalians were left to their own resources, and consequently submitted to the Persian arms (*Herod., 7, 172, seqq.*), which Herodotus insinuates they did the more readily, that they might thus profit by foreign aid in avenging themselves on the Phocians, with whom they had been engaged in frequent but unsuccessful hostilities. (*Herod., 8, 27.*)—Little notice is taken by the Greek historians of the affairs of Thessaly, from the Persian invasion to the battle of Leuctra, except the fact mentioned by Thucydides of an expedition having been undertaken by the Athenians, under the command of Myronides, with a view of reinstating Orestes, son of Echekratidas, prince of Thessaly, who had been banished from his country. The Athenian general, on that occasion, advanced as far as Pharsalus; but his progress being checked by the superiority of the Thessalian cavalry, he was forced to retire without having accomplished any of the objects of the expedition. (*Thucyd., 1, 111.*)—The Thessalians appear to have taken no part in the Peloponnesian war, though they might naturally be inclined to favour the Athenian cause, from their early alliance with that state. Hence it was that Brasidas felt it necessary to use such secrecy and despatch in traversing their territory on his march towards Thrace. (*Thucyd., 4, 78.*) Some troops, which were afterward sent by the Lacedæmonians in order to re-enforce their army in that quarter, met with a more determined opposition, and were compelled to retrace their steps. (*Thucyd., 5, 13.*) On another occasion we find the Thessalians in league with the Bœotians, endeavouring to harass and intercept the march of Agesilaus through their country, on his return from Asia Minor. This attempt, however, was rendered abortive by the skilful manœuvres of the Spartan prince; and the cavalry of Thessaly, notwithstanding its boasted superiority, met with a decided repulse from the Lacedæmonian horse. (*Xen., Hist. Gr., 4, 3, 2.*)—While Sparta, however, was struggling to make head against the formidable coalition, of which Bœotia had taken the lead, Thessaly was acquiring a degree of importance and weight among the states of Greece which it had never possessed in any former period of its history. This was effected, apparently, solely by the energy and ability of Jason, who, from being chief or tyrant of Phars; had risen to the rank of Tagus, or commander of the Thessalian states. By his influence and talents, the confederacy received the accession of several important cities; and an imposing military force, amounting to 8000 cavalry, more than 20,000 heavy-armed infantry, and light troops sufficient to oppose the world, had been raised and fitted by him for the service of the commonwealth. (*Xen., Hist. Gr., 6, 1, 6.*) His other resources being equally effective, Thessaly seemed destined, under his direction, to become the leading power in Greece. We may estimate the influence that he had already acquired, from the circumstance of his having been called upon to act as mediator between the Bœotians and Spartans after the battle of Leuctra. (*Xen., Hist. Gr., 6, 4, 22.*)—This brilliant period of political influence and power was, however, of short duration, as Jason not long after lost his life by the hand of an assassin, during the celebration of some games which he had instituted; and Thessaly, on his death, relapsed into that state of weakness and insignificance from which it had so lately emerged. (*Xen., Hist. Gr., 6, 4, 32.*) The Thessalians, finding themselves unable to defend their liberties, continually threatened by the tyrants of Phars, successors of Jason, first sought the protection of the Bœotians, who sent to their aid a body of troops commanded by the brave Pelopidas. They next applied for assistance to Philip of Macedon,

who succeeded in defeating, and finally expelling these oppressors of their country; and, by the important services thus rendered to the Thessalians, secured their lasting attachment to his interests, and finally obtained the presidency of the Amphictyonic council. (*Polyb., Esc.*, 9, 28.) Under his skilful management, the troops of Thessaly became a most important addition to the resources he already possessed; and to this powerful re-enforcement may probably be attributed the success which attended his campaign against the Boeotians and Athenians. On the death of Philip, the states of Thessaly, in order to testify their veneration for his memory, issued a decree, by which they conferred to his son Alexander the supreme station which he had held in their councils; and also signified their intention of supporting his claims to the title of commander-in-chief of the whole Grecian confederacy. The long absence of that enterprising prince, while engaged in distant conquests, subsequently afforded his enemies an opportunity of detaching the Thessalians from his interests; and the Lamiae war, which was chiefly sustained by that people against his generals Antipater and Craterus, had nearly proved fatal to the Macedonian influence, not only in Thessaly, but over the whole continent of Greece. By the conduct and ability of Antipater, however, the contest was brought to a successful issue, and Thessaly was preserved to the Macedonian crown (*Polyb.*, 4, 76) until the reign of Philip, son of Demetrius, from whom it was wrested by the Romans after the victory of Cynoscephalæ. All Thessaly was then declared free by a decree of the senate and people (*Liv.*, 33, 32), but from that time it may be fairly considered as having passed under the dominion of Rome, though its possession was still disputed by Antiochus (*Liv.*, 36, 9, *seqq.*), and again by Perseus, the son of Philip. Thessaly was already a Roman province, when the fate of the empire of the world was decided in the plains of Pharsalia.—With the exception, perhaps, of Boeotia, this seems to have been the most fertile and productive part of Greece, in wine, oil, and corn, but more especially the latter, of which it exported a considerable quantity to foreign countries. (*Xen., Hist. Gr.*, 6, 1, 4.—*Theophr., Hist. Plant.*, 8, 7, et 10.) Hence, as might be expected, the Thessalians were the wealthiest people of Greece; nor were they exempt from those vices which riches and luxury generally bring in their train. (*Athen.*, 12, 5, p. 624.—*Theopomp., ap. eund.*, 6, 17, p. 260.—*Plat., Crit.*, p. 50.)—Like the Lacedæmonians, they employed slaves, who were named *Penestæ*; these probably were a remnant of the first tribes that inhabited the country, and that had been reduced to a state of servitude by their invaders. The *Penestæ* formed no inconsiderable part of the population, and not unfrequently endeavoured to free themselves from the state of oppression under which they groaned. (*Xen., Hist. Gr.*, 6, 1, 4.—*Aristot., de Repub.*, 2, 9.—*Cramer's Anc. Greece*, vol. 1, p. 343, *seqq.*)

THESSALIOÏTIS, a part of Thessaly lying below the Peneus, and to the west of Magnesia and Phthiotis. (*Vid.* Thessalia, near the beginning of the article.)

THESSALONICA, I. a city of Macedonia, at the north-eastern extremity of the Sinus Thermaicus. It was at first an inconsiderable place, under the name of Therme, by which it was known in the times of Herodotus, Thucydides, Æschines (*Fals. Legat.*, 29), and Scylax. The latter speaks also of the Thermaean Gulf. Therme was occupied by the Athenians prior to the Peloponnesian war, but was restored by them to Perdiccas shortly after. (*Thucyd.*, 1, 51.—*Id.*, 2, 29.) We are informed by Strabo that Cassander changed the name of Therme to Thessalonica, in honour of his wife, who was daughter of Philip. (*Epit.*, 7, p. 330.—*Scymn., Ch.*, v. 625.—*Zonar.*, 12, 26.) Stephanus of Byzantium asserts that the former name

of Thessalonica was Halka, and quotes a passage from a work written by Lucillus of Tarrha on this place, to account for the reason which induced Philip to call his daughter Thessalonica. Cassander is said to have collected together the inhabitants of several neighbouring towns for the aggrandizement of the new city, which thus became one of the most important and flourishing ports of northern Greece. It surrendered to the Romans after the battle of Pydna (*Liv.*, 44, 10), and was made the capital of the second region of Macedonia. (*Id.*, 45, 29.) Situated on the great Egnatian Way, 227 miles from Dyrrhachium, and possessed of an excellent harbour, well placed for commercial intercourse with the Hellespont and Asia Minor, it could not fail of becoming a very populous and flourishing city. The Christian will dwell with peculiar interest on the circumstances that connect the name of St. Paul with the history of this place. It will be seen, from the epistles which he addressed to his converts here, how successful his exertions had been, notwithstanding the opposition and enmity he had to encounter from his misguided countrymen.—Pliny (4, 10) describes Thessalonica as a free city; and Lucian as the largest of the Macedonian towns. (*Asin.*, 46.—*Compare Ptol.*, p. 84.—*Hierocl.*, p. 638.) Later historians name it as the residence of the prefect, and the capital of Illyricum. (*Theodoret, Hist. Eccles.*, 5, 17.—*Socrat., Hist. Eccles.*, c. 11.) For an account of the dreadful massacre that once took place here, consult the article Theodosius II.—The modern name of the place is *Saloniki*. (*Cramer's Anc. Greece*, vol. 1, p. 236, *seqq.*—*Compare Clarke's Travels*, vol. 7, p. 443, *seqq.*)—II. A daughter of Philip, married to Cassander, and from whom the city of Thessalonica is said to have received its name. (*Vid.* preceding article.)

THETEUR, a son of Idmon and Læthoë, father to Calchas. From him Calchas is often called *Thestorides*. (*Ovid, Met.*, 12, 19.—*Stat., Ach.*, 1, 497.)

THETIS, one of the sea-deities, daughter of Nereus and Doris. To reward the virtue of Peleus (*vid.* Peleus), the king of the gods resolved to give him a goddess in marriage. The spouse selected for him was Thetis, who had been wooed by Jupiter himself and his brother Neptune; but Themis having declared that the child of Thetis would be greater than his sire, the gods withdrew. (*Pind., Isthm.*, 8, 58, *seqq.*) According to another account, she was courted by Jupiter alone till he was informed by Prometheus that her son would dethrone him. (*Apollod.*, 3, 13, 1.—*Schol. ad Il.*, 1, 519.) Others, again, maintain that Thetis, who was reared by Juno, would not listen to the suit of Jupiter, and that the god, in his anger, condemned her to espouse a mortal (*Apollod., l. c.*), or that Juno herself selected Peleus for her spouse. (*Il.*, 24, 59.—*Apoll. Rhod.*, 4, 793, *seq.*) Chiron, being made aware of the will of the gods, advised Peleus to aspire to the hand of the nymph of the sea, and instructed him how to win her. Peleus therefore lay in wait, and held her fast, though she changed herself into every variety of form, becoming fire, water, a serpent, and a lion. The wedding was solemnized on Mount Pelion: all the gods, except Discord (*vid.* Discordia), were invited, and they all, with this single exception, honoured it with their presence (*Il.*, 24, 62), and bestowed armour on the bridegroom. (*Il.*, 17, 195.—*Id.*, 18, 84.) Chiron gave him an ashen spear, and Neptune the immortal Harpy-born steeds Balius and Xanthus. The muses sang, the Nereides danced, to celebrate the wedding, and Ganymedes poured out nectar for the guests. (*Eurip., Iph. in Aul.*, 1036, *seqq.*—*Catullus, Nuptia Pel. et Thet.*) The offspring of this union was the celebrated Achilles. When the goddess wished to make this her child immortal, the indiscreet curiosity of Peleus frustrated her design, and, leaving her babe, she abandoned for ever the mansion of her

husband, and returned to her sister Neraïdes. (*Vid.* Achilles, where a full account is given.)

THIRMIDA, a town in the interior of Numidia, where Hiempsal was slain by the soldiers of Jugurtha. (*Sall., Jug., c. 12, 41.*) The site is unknown. (*Mannert, Geogr., vol. 10, pt. 2, p. 372.*)

THISES, I. a beautiful female of Babylon, between whom and a youth named Pyramus, a native of the same place, a strong attachment subsisted. Their parents, however, being averse to their union, they adopted the expedient of receiving each other's addresses through the chink of a wall which separated their dwellings. In the sequel, they arranged a meeting at the tomb of Ninus, under a white mulberry-tree. Thisbe, enveloped in a veil, arrived first at the appointed place; but, terrified at the appearance of a lioness, she fled precipitately, and in her flight dropped her veil, which, lying in the animal's path, was rent by it, and smeared with the blood that stained the jaws of the lioness from the recent destruction of some cattle. Pyramus, coming soon after to the appointed place, beheld the torn and bloody veil, and, concluding that Thisbe had been destroyed by some savage beast, slew himself in despair. Thisbe, returning after a short interval to the spot where she had encountered the lioness, beheld the bleeding form of Pyramus, and threw herself upon the fatal sword, still warm, as it was, with the blood of her lover. According to the poets, the mulberry that overhung the fatal scene changed the hue of its fruit from snow-white to a blood-red colour. (*Ovid, Met., 4, 55, seqq.*)—II. A town of Boeotia, northwest of Acra, and near the confines of Phocia. It was famed for its abounding in wild pigeons. (*Hom., Il., 2, 502.*—*Strabo, 411.*) Xenophon writes the name in the plural, Thiseæ. (*Hist. Gr., 6, 4, 3.*) The modern *Katoria* marks its site. Sir W. Gell remarks, that the place is remarkable for the immense number of rock-pigeons still found here. This circumstance, he observes, is the more striking, as neither the birds, nor rocks so full of perforations, in which they build their nests, are found in any other part of the country. (*Itin., p. 115.*)

THOAS, I. a king of the Tauric Chersonese when Orestes and Pylades, in concert with Iphigenia, carried off from that country the statue of the Tauric Diana. (*Vid.* Orestes and Iphigenia.)—II. King of Lemnos, and father of Hypsipyle. (*Vid.* Hypsipyle.)

THORAX, I. a mountain near Magnesia ad Mæandrum, in Lydia, on which the poet Daphidas was crucified for having written some satirical lines against Attalus, king of Pergamus. Hence the proverb, *φύλαττον τὸν θώρακα*, "Take care of Thorax." (*Strab., 647.*—*Cic., de Fat., c. 3.*—*Erasmus, Chil. 2, cent. 4, n. 52.*)

THORNAK, a mountain of Laconia, north of Sparta, and forming part of the range called Menalaia. It is now *Thornika*. On this mountain was a temple of Apollo, with a statue of the god, to which a quantity of gold was presented by Croesus (*Herod., 1, 69*); but the Lacedæmonians made use of it afterward to adorn the more revered image of the Amycæan Apollo. (*Pausan., 8, 10.*—*Cramer's Ancient Greece, vol. 3, p. 219.*)

THOTH, an Egyptian deity, corresponding in some degree to the Grecian Hermes and the Latin Mercurius. (*Vid.* remarks under the article Mercurius.)

THRACES, the inhabitants of Thrace. (*Vid.* Thracians.)

THRACIA, I. a name of frequent occurrence in the earliest history of Greek civilization, and designating, in all probability, not the country called Thracia in a later age, but the district subsequently known by the appellation of Pieria.—By far the most remarkable circumstance in the accounts that have come down to us respecting the earliest minstrels of Greece is, that several of them are called *Thracians*. It is notori-

ously true that, in the later historic times, when the Thracians were condemned as a barbarian race, a notion should have sprung up that the first civilization of Greece was due to them; consequently we cannot doubt that this was a tradition handed down from a very early period. Now if we are to understand it to mean that Eumolpos, Orpheus, Musæus, and Thamyras were the fellow-countrymen of those Edonians, Odrisians, and Odontians who, in the historical ages, occupied the Thracian territory, and who spoke a barbarian language, that is, one unintelligible to the Greeks, we must despair of being able to comprehend these accounts of the ancient Thracian minstrels, and of assigning them a place in the history of Grecian civilization; since it is manifest that at this early period, when there was scarcely any intercourse between different nations, or knowledge of foreign tongues, poets who sang in an unintelligible language could not have had more influence on the mental development of the people than the twittering of birds. Nothing but the dumb language of mimicry and dancing, and musical strains independent of articulate speech, can at such a period pass from nation to nation, as, for example, the Phrygian music passed over to Greece; whereas the Thracian minstrels are constantly represented as the fathers of poetry, which, of course, is necessarily combined with language. When we come to trace more precisely the country of these Thracian bards, we find that the traditions refer to Pieria, the district to the east of the Olympus range, to the north of Thessaly, and the south of Eubœa or Macedonia. In Pieria, likewise, was Libethra, where the Muses are said to have sung the lament over the tomb of Orpheus: the ancient poets, moreover, always make Pieria, not Thrace, the native place of the Muses, which last Homer clearly distinguishes from Pieria. (*Il., 14, 226.*) It was not until the Pierians were pressed in their own territory by the early Macedonian princes, that some of them crossed the Strymon into Thrace proper, where Herodotus mentions the castles of the Pierians in the expedition of Xerxes (7, 112). It is, however, quite conceivable that, in early times, either on account of their close vicinity or because all the north was comprehended under one name, the Pierians might, in southern Greece, have been called Thracians. These Pierians, from the intellectual relations which they maintained with the Greeks, appear to have been a Grecian race; which supposition is also confirmed by the Greek names of their places, rivers, fountains, &c., although it is probable that, situated on the limits of the Greek nation, they may have borrowed largely from neighbouring tribes. (*Müller's Dorians, vol. 1, p. 472, 488, 501.*) A branch of the Phrygian nation, so devoted to an enthusiastic worship, once dwelt close to Pieria, at the foot of Mount Bermia, where King Midas was said to have taken the drunken Silenus in his rose-gardens. In the whole of this region a wild and enthusiastic worship of Bacchus was diffused among both men and women. It may be easily conceived, that the excitement which the mind thus received contributed to prepare it for poetic enthusiasm. These same Thracians or Pierians lived, up to the time of the Doric and Æolic migrations, in certain districts of Boeotia and Phocia. That they had dwelt about the Boeotian mountain of *Helicon*, in the district of Theopie and Acra, was evident to the ancient historians, as well from the traditions of the cities as from the agreement of many names of places in the country near Olympus (Libethraion, Pimpleia, Helicon, &c.). At the foot of Parnassus, too, in Phocia, was said to have been situated the city of Deulias, the seat of the Thracian king Tereus, who is known by his connexion with the Athenian king Pandion, and by the fable of the metamorphosis of his wife Procne into a nightingale.—From what has been said, it appears suf-

scarcely clear that these Pieriæns of Thracians, dwelling about Helicon and Parnassus, in the vicinity of Attica, are chiefly signified when a Thracian origin is ascribed to the mythic bards of Attica. (*Müller, Hist. Gr. Lit.*, p. 26, *seqq.*)—II. A large tract of country between the Strymon and the Euxine from west to east, and between the chain of Mount Hæmus and the shores of the *Ægean* and *Propontis* from north to south. Such, at least, are the limits assigned to it by Herodotus and Thucydides, though great changes took place in ages posterior to these historians. That the Thracians, however, were at one period much more widely disseminated than the confines here assigned them would lead us to infer, is evident from the facts recorded in the earliest annals of Grecian history relative to their migrations to the southern provinces of that country. We have the authority of Thucydides for their establishment in Phocis (2, 49). Strabo (p. 401, 410) certifies their occupation of Boeotia. And numerous writers attest their settlement in Eleusis of Attica, under Eumolpus, whose early wars with Erechtheus are related by Thucydides (2, 15), Pausanias (1, 38), and others. But these, in all probability, are the Thracians alluded to under No. I. Nor were their colonies confined to the European continent alone; for, allured by the richness and beauty of the Asiatic soil and climate, they crossed in numerous bodies the narrow strait which parted them from Asia Minor, and occupied the shores of Bithynia, and the fertile plains of Mysia and Phrygia. (*Herod.*, 7, 73.—*Strabo*, 308.) On the other hand, a great revolution seems to have been subsequently effected in Thrace by a vast migration of the Teucri and Mysi, who, as Herodotus asserts, conquered the whole of Thrace, and penetrated as far as the Adriatic to the west, and to the river Peneus towards the south, before the Trojan war.—Whence and at what period the name of Thracians was first applied to the numerous hordes which inhabited this portion of the European continent, is left open to conjecture. Bochart and others have supposed that it was derived from Thraz, the son of Japheth; certain it is, we find the name already existing in the time of Homer, who represents the Thracians as joining the forces of Priam in the siege of Troy, under the conduct of Rhesus, their chief (*Il.*, 10, 425), said to be the son of the river Strymon. (*Eurip., Rhes. Arg.*)—Herodotus affirms that the Thracians were, next to the Indians, the most numerous and powerful people in the world; and that, if all the tribes had been united under one monarch or under the same government, they would have been invincible; but from their subdivision into petty clans, distinct from each other, they were rendered insignificant. (*Herod.*, 5, 3.) They are said by the same historian to have been first subjugated by Sesostris (2, 102), and, after the lapse of many centuries, they were reduced under the subjection of the Persian monarchy, by Megabazus, general of Darius. (*Herod.*, 5, 3.) But, on the failure of the several expeditions undertaken by that sovereign and his son Xerxes against the Greeks, the Thracians apparently recovered their independence, and a new empire was formed in that extensive country, under the dominion of Sitalces, king of the Odrysæ, one of the most numerous and warlike of their tribes. Thucydides, who has entered into considerable detail on this subject, observes, that of all the empires situated between the Ionian Gulf and the Euxine, this was the most considerable both in revenue and opulence: its military force was, however, very inferior to that of Scythia, both in strength and numbers. The empire of Sitalces extended along the coast, from Abdera to the mouth of the Danube, a distance of four days' and nights' sail; and in the interior, from the sources of the Strymon to Byzantium, a journey of thirteen days. The founder of this empire appears to have been Teres (*Herod.*, 7, 137.—

Thucyd., 2, 20), whose son Sitalces, at the instigation of the Athenians, with whom he was allied, undertook an expedition into Macedonia. Having raised a powerful army of Thracians and Pæonians, the sovereign of the Odrysæ penetrated into the territory of Perdiccas, who, unable to oppose in the field so formidable an antagonist, confined his resistance to the defence of the fortified towns; and by this mode of warfare he at length wearied out the Thracian prince, who was persuaded by his nephew Seuthæ to abandon the expedition and return to his dominions. In return for this service, Seuthæ, we are told, received in marriage Stratonicæ, the sister of Perdiccas. (*Thucyd.*, 2, 97, *seqq.*) Sitalces, some years after, having been defeated and slain in a battle with the Triballi, another considerable Thracian clan, was succeeded by Seuthæ, who carried the power of the Odrysian empire to its highest pitch. (*Thucyd.*, 4, 101.—*Id.*, 2, 97.) The splendour of this monarchy was, however, of short duration, as on the death of Seuthæ it began gradually to decline; and we learn from Xenophon that, on the arrival of the ten thousand in Thrace, the power of Medocus, or Amadocus, the reigning prince of the Odrysæ, was very inconsiderable. (*Anab.*, 7, 2, 17.—*Id. ibid.*, 8, 7.)—When Philip, the son of Amyntas, ascended the throne of Macedonia, the Thracians were governed by Cotys, a weak prince, whose territories became an easy prey to his artful and enterprising neighbour. The whole of that part of Thrace situate between the Strymon and the Nestus was thus added to Macedonia, whence some geographical writers term it Macedonia Adjuncta. Cotys having been assassinated not long after, was succeeded by his son Chersobleptes, whose possessions were limited to the Thracian Chersonese; and even of this he was eventually stripped by the Athenians (*Diod. Sic.*, 16, 34.—*Demosth. in Aristocr.*, p. 678), while Philip seized on all the maritime towns between the Nestus and that peninsula. On Alexander's accession to the throne, the Triballi were by far the most numerous and powerful people of Thrace; and, as they bordered on the Pæonians and extended to the Danube, they were formidable neighbours on this the most accessible frontier of Macedonia. Alexander commenced his reign by an invasion of their territory; and, having defeated them in a general engagement, pursued them across the Danube, whither they had retreated, and compelled them to sue for peace. After his death, Thrace fell to the portion of Lysimachus, one of his generals, by whom it was erected into a monarchy. On his decease, however, it reverted to Macedonia, and remained under the dominion of its sovereigns until the conquest of that country by the Romans. The divisions of Thrace under the Roman sway were as follows: 1. *Thracia*, a name applied, in a limited sense, to the country around the Hebrus in the earlier part of its course: the capital was Philippopolis.—2. *Hæmimontæ* or *Æmimontus*, including the country along the Hebrus in the eastern part of its course, and extending northward to Hæmus; it stretched off also to the northeast until it struck the coast: the capital was Hadrianopolis.—3. *Europa*, the coast along the Propontis and Hellespont, including the Thracian Chersonese: the capital was Perinthus.—4. *Rhodope*, the southern coast from the Sinus Meles to the mouth of the Nestus.—5. *Mæria Secunda*, north of Hæmus.—6. *Scythia*, below the Danube, near its mouth. (*Cramer's Anc. Græcæ*, vol. 1, p. 284.—*Mannert, Geogr.*, vol. 7, p. 69.)

THASIAS, Pætus, a Roman senator in the reign of Nero, distinguished for his integrity and patriotism. He was a native of Patavium, educated in stoical tenets, and a great admirer of Cato of Utica, whose life he wrote. His contempt of the base adulation of the senate, and his open and manly animadversions on the enormities of the emperor, were the occasion of his

being condemned to death. He died A.D. 66, in the 13th year of Nero's reign. Tacitus says that Nero endeavoured to extirpate virtue itself by the destruction of Pætus and Soranus. (*Jus.*, 5, 36.—*Martial*, 1, 19.—*Tac.*, *Ann.*, 15, 16.)

THRASYBULUS, an Athenian general, one of the commanders in the naval battle of Arginusæ. He subsequently headed the party from Phyla which overthrew the government of the thirty tyrants. Thrasybulus was afterward sent with an Athenian fleet to the coast of Asia, where he gained some considerable advantages. Having, after this, proceeded to the collection of tribute from the towns, and having, in the course of this, come to the city of Aspendus, the inhabitants of this place were so exasperated by some irregularity of his soldiers, that they attacked his camp at night, and he was killed in his tent. Thrasybulus was a man of tried honesty and patriotism, and had shown uncommon ability in some very trying situations. The only cloud that rests upon his memory is an appearance of having concurred with Theramenes in the accusation of their six colleagues at Arginusæ, if not actively, at least by withholding the testimony that might have saved them: but the evidence which we have is not sufficient to warrant us in decidedly fixing so dark a stain on a character otherwise so pure. (*Corn. Nep.*, *Vit. Thrasyb.*—*Diod. Sic.*, 13, 98.—*Id.*, 13, 101.—*Id.*, 14, 33; 94, 99.)

THRASYLLUS, one of the Athenian commanders at the battle of Arginusæ, condemned to death with his colleagues for omitting to collect and bury the dead after the action. (*Vid. Arginusæ.*)

THRASYMENEUS LACUS. *Vid. Trasymenus Lacus.*

THIRANBUS, one of the surnames of Bacchus.

THRINAKIA, an island mentioned in the *Odyssey*, on which the flocks and herds of the Sun-god fed, under the care of his daughters Phæthusa and Lampetia, and to which Ulysses came immediately after escaping Sylla and Charybdis. On reaching this sacred island, his companions, in defiance of the warning of Ulysses, slaughtered some of the oxen while he slept. The hero, on awaking, was filled with horror and despair at what they had done; and the displeasure of the gods was manifested by prodigies; for the hides crept along the ground, and the flesh lowed on the spits. They fed for six days on the sacred cattle; on the seventh the storm which had driven them to Thrinakia fell, and they left the island; but, as soon as they had lost sight of land, a terrible west wind, accompanied by thunder, lightning, and pitchy darkness, came on. Jupiter struck the ship with a thunderbolt: it went to pieces, and all the sacrilegious crew were drowned.—The resemblance between Thrinakia and Trinacria, a name of Sicily, has induced both ancients and moderns to acquiesce in the opinion of the two islands being identical. Against this opinion it has been observed, that Thrinakia was a *desert isle* (*ἄνῃος ἐρημὸν*.—*Od.*, 12, 351), that is, an uninhabited isle; and that, during the whole time that Ulysses and his men were in it, they did not meet with any one, and could procure no food but birds and fish; that it is called "*the excellent isle of the God*" (*Odys.*, 12, 261), whose peculiar property it therefore must have been; that, according to the analogy of the *Odyssey*, it must have been a small island, for such were *Æma*, Ogygia, and all we meet; not one of which circumstances agrees with Sicily. It seems, therefore, the more probable supposition, that the poet regarded Thrinakia as an islet, about the same size as those of Circe and Calypso, belonging to the Sun-god, and tenanted only by his flocks and herds, and his two daughters their keepers. He must also have conceived it to lie much more to the west than Sicily, for it could not have been more than the third day after leaving *Æma* that Ulysses arrived at it. (*Keightley's Mythology*, p. 273, *seq.*)

THRONIUM, I. a town of the Locri Epizephidii, in

Greece, noticed by Homer as being near the river Boagrius. (*Il.*, 2, 633.) It was thirty stadia from Scarpæa, and at some distance from the coast, as appears from Strabo (436). Thronium was taken by the Athenians during the Peloponnesian war (*Thucyd.*, 2, 26), and several years after it fell into the hands of Onomarchus, the Phocian general, who enslaved the inhabitants. (*Diod. Sic.*, 12, 44.—*Æsch.*, *de Fals. Legat.*, p. 46.—*Liv.*, 32, 36.—*Polyb.*, 17, 9, 3.) Dr. Clarke conjectured that Thronium was situated at *Bodonitza*, a small town on the chain of Mount Ceta; but Sir W. Gell is of opinion that this point is too far distant from the sea, and that it accords rather with an ancient ruin above *Longachi* (*Liv.*, p. 235); and this is in unison also with the statement of Meletius the Greek geographer, who cites an inscription discovered there, in which the name of Thronium occurs (vol. 2, p. 323.—*Cramer's Anc. Greece*, vol. 2, p. 114).—II. A town of Illyricum, at some distance from the coast above Oricum, and near another place called Amentia. Both these places are said to have been founded here by the Abantes, in conjunction with the Locrians, they having been driven hither by adverse winds on their return from Troy. (*Cramer's Anc. Greece*, vol. 1, p. 65.)

THUCYDIDES, I. a celebrated Greek historian, born in Attica, in the village of Halimusia, and in the tribe of Leontium, B.C. 471. His father's name was Olorus, or, as some write the name, Orolus, and on the mother's side he was descended from Cimon, son of Miltiades. Of the boyhood and education of the historian we have little information. The first remarkable circumstance of his early youth is one which the biographers of Thucydides never fail to relate. It is stated, on the authority of Lucian (*de conscrib. Hist.*, c. 16), Suidas, and Photius, that Thucydides, when a youth of fifteen, stood with his father near Herodotus when the latter was reciting his history at the Olympic festival; and was so much interested with the work, and affected at the applause with which it was received, that he shed tears. On observing which, Herodotus exclaimed to his father, *Ὅρῃς ἡ φύσις τοῦ νέου σου πρὸς τὰ μαθήματα*, "Your son burns with ardour for learning." This recitation is proved by Dodwell to have taken place at the 81st Olympiad, B.C. 466. Now, if what is said by Pamphila, a female author of the age of Nero, be true, the age of Thucydides at the period of this recitation was fifteen. The grounds on which the whole account rests have been carefully examined by Poppe, Dahlmann, Götter, and other German critics, and the story has been pronounced fabulous. (Compare remarks under the article Herodotus.)—Marcellinus informs us that the preceptor of Thucydides, in oratory and rhetoric in general, was Antipho, on whom the historian has passed a short but significant encomium in a part of his work (8, 68). In philosophy, and the art of thinking and reasoning, he was instructed by Anaxagoras. Of the manner in which he spent his early manhood we have no certain information. That he served the usual time in the *ἐπιπλοῖον*, or militia, we cannot doubt. How he spent the period from his militia-service to that of his appointment to command the fleet in Thrace we have no way of ascertaining. An ancient anonymous biographer of the historian says that he had participated in the Athenian colony sent to Thurium. But if he had by inheritance any considerable property in Thrace, which is highly probable, no reason can be imagined why he should have taken part in this colony. If, however, that statement be correct, Dodwell seems to have proved the circumstance must have taken place in his twenty-seventh year. Why he went, or how long he stayed, we are not informed. If he went at all, he probably did not remain very long; and there is no doubt that he had returned to his country long before the commencement of the Peloponnesian war,

THUCYDIDES.

otherwise it would make his marriage with the Thracian lady of Scapteyle (by which he obtained rich property in mines, &c.) an improbably late one. Whether he was employed in military service in the first seven years of the war is uncertain; it is probable, however, that he was. In the eighth year of the war and the forty-seventh of his age, B.C. 434, he was appointed to the command of the Athenian fleet off the coast of Thrace, which included the direction of affairs in the various Athenian colonies there. He occupied with his fleet a station at Thasus, and, being suddenly summoned to the defence of Amphipolis, he hastened thither; but, owing to unavoidable circumstances, was too late by only half a day. He, however, succeeded in saving Eion, though, had he not arrived at the time he did, the place would have been occupied by Brasidas the very next morning. It is plain, that to save Amphipolis was a physical impossibility, and great activity was used in saving Eion. He therefore merited praise rather than censure. And yet the Athenian people, out of humour with the turn which things were taking in Thrace, condemned him to banishment; though, with a magnanimity scarcely paralleled, he makes no mention of it in his history of that period, and only touches upon it incidentally afterward, in order to show his advantages for arriving at the truth, and then without a word of complaint. Discharged from all duties, and freed from all public avocations, he was left without any attachments but to simple truth, and proceeded to qualify himself for commemorating exploits in which he could have no share. On his banishment he retired to Scapteyle, the property of his wife, and thus dedicated his leisure to the formation of his great work, and (as Marcellinus, the ancient biographer, says) employed his wealth liberally in procuring the best information of the events of the war, both from Athens and Lacedæmon. How he passed the period of his exile may, then, be very well imagined; nor is it necessary to fill up that space, as Dodwell does, with such events as "the death of Perdiccas, king of Macedon; the accession of Archelaus, his successor; the end of the *ήλικία στρατεύσεως* of Thucydides;" for his military life had virtually been defunct eighteen years before. As to the period of his exile, it was, as he himself tells us (5, 26), twenty years; and his return is, by some, fixed at 403 B.C., at the time when an amnesty was passed for all offences against the state; by others, to the year before, when Athens was taken by Lysander, and the exiles mostly returned. The former opinion has been shown by Krueger to be alone the correct one; "for," argues he, "since Thucydides says that he was banished for twenty years in the eighth year of the war, which also, he affirms, lasted twenty-one years, it follows that his recall must have been in the year after Athens was taken." To which it may be added, that the high-minded historian would have disdained to avail himself of such an unauthorized way of returning to his country as that eagerly snatched at by the bulk of the exiles, but would wait until the public amnesty should give him a full right to do so. Perhaps, however, the real truth of the matter is what Pausanias relates, who mentions among the antiquities a statue to the memory of one Ctenobius, for being the mover of a separate decree of the assembly for the recall of Thucydides (1, 23). It is probable that, besides the general amnesty by which the former exiles were permitted to return, a particular decree was made for Thucydides; and, considering the gross injustice of his banishment, this was no more than he had a right to expect. It is not necessary to notice all those many improbable, and sometimes contradictory accounts concerning the life of Thucydides which are found in some of the later Greek writers; as, for instance, Pausanias, who, besides making Thucydides descended from Pisistratus (which is inconsistent with plain facts, for the genealogies of Miltiades

THUCYDIDES.

and Pisistratus show no sort of affinity), relates that Thucydides was assassinated immediately on his return. And Zopyrus, referred to by Marcellinus, relates that such an event took place, but some years afterward. Had, however, that really been the case, it would have been perfectly known, and could scarcely but have been alluded to by Cicero, or some other great writer of antiquity. Poppo, indeed, maintains that he lived many years after his return; but his reason (namely, that after his return he digested his history into order) is not convincing. For it surely would not require many years to do that, especially as the last book was, after all, left in a rough and undigested state. Besides, the probability is rather that a man of sixty-seven should not live many years. The strongest proof adduced is, that the historian (3, 116) makes mention of the third eruption of *Ætna*, which is said to have taken place B.C. 395. But this argument depends upon the interpretation of the words of that passage, which probably gave a countenance to the above opinion. It seems, therefore, to be uncertain how many years he lived after his recall from banishment. The manner in which he speaks of the conclusion of the war, and his having lived throughout the whole of it in the full enjoyment of his faculties, strongly confirms the statement of Pamphila, from which it follows that he was sixty-seven years old at its conclusion. And as it seems probable that he would not arrange the work before the conclusion of the war, so the moulding of the whole into its present form might consume some years of the life of an aged man. Yet its being at last left incomplete is unfavourable to the opinion of Dodwell, that Thucydides lived beyond his eightieth year. (*Bloomfield's Thucydides*, vol. 1, p. 16, *seqq.*)—The title of the work is as follows: *Συγγραφή περί τοῦ πολέμου τῶν Πελοποννησίων καὶ Ἀθηναίων* ("History of the war between the Peloponnesians and Athenians"). It is in eight books, and extends to near the close of the twenty-first year of the war; but the eighth book is not so finished as the rest, and, indeed, there is a gradual decline of vigour and finished execution after the first five books. This falling off and abrupt termination of his history may best be explained by a gradual deprivation of health, terminating in a sudden death.—With respect to the temper and disposition of Thucydides, it was grave, cool, and candid. "He seems," Smith observes, "to have been all judgment and no passion." He evidently had nothing choleric or resentful in his constitution. His notions in philosophy and religion being above the conception of the vulgar, procured him, as in the case of Anaxagoras, Socrates, Pericles, and others, the name of an atheist, "which," says Hobbes, "they bestowed upon all men that thought not as they did of their ridiculous religion."—As regards the merits of Thucydides as an historian, we may copy the words of the same writer. "For the faith of this history I shall have the less to say, in respect that no man hath ever yet called it into question. Nor, indeed, could any man justly doubt of the truth of that writer, in whom they had nothing at all to suspect of those things that could have caused him either voluntarily to lie or ignorantly to deliver an untruth. He overtasked not his strength by undertaking a history of things long before his time, and of which he was not able to inform himself. He was a man that had as much means, in regard both of his dignity and his wealth, to find the truth of what he relateth, as was needful for a man to have. He used as much diligence in search of the truth (noting everything while it was fresh in his memory, and laying out his wealth upon intelligence) as was possible for a man to use.—He affected, least of any man, the acclamations of popular authorities, and wrote not his history to win applause, as was the use of that age, but for a monument to instruct the ages to come, which he professeth himself, and entitleth his book

Kρίσις ἐς δέλ, a possession for everlasting. He was far from the necessity of servile writers, either to fear or to flatter. In fine, if the truth of a history did ever appear by the manner of relating, it doth so in this history."—Smith also has a discourse on the qualifications of Thucydides as an historian which merits perusal. He therein shows him to have had *all* the qualifications that can be thought necessary; namely, "to be abstracted from every kind of connexion with persons or things that are the subject matter; to be of no country, no party; clear of all passion, independent in every light; entirely unconcerned who is pleased or displeased with what he writes; the servant only of reason and truth. He was wholly unconcerned about the opinion of the generation in which he lived. He wrote for posterity. He appealed to the future world for the value of the present he had made them. The judgment of succeeding ages has approved the compliment he thus made to their understandings. So long as there are truly great princes, able statesmen, sound politicians—politicians that do not rend asunder politics from good order and the general happiness, he will meet with candid and grateful acknowledgments of his merits."—Thucydides has been sometimes censured for the introduction of harangues into his history, and this has been made an argument, by some, against his general veracity as an historian. The truth is, however, that the writer never meant them to be regarded by the reader as having been actually pronounced by the speakers in question: they serve merely as vehicles for conveying his own sentiments on passing events, for painting more distinctly the characters of those whom he brings forward in the course of his narrative, and for relating circumstances to which he could not well refer in the main body of his history. The harangues of Thucydides impart frequently to his work a kind of dramatic character, and agreeably interrupt the monotony occasioned by his peculiar arrangement of events. Demosthenes was so ardent an admirer of them, that he is said to have copied them over ten times, in order to appropriate to himself the style of this great writer. The finest is the funeral oration of Pericles, in honour of those who had fallen in the service of their country.—Another charge made against Thucydides is the division of his work into years, and even into seasons, for he divides each year into two seasons, summer and winter. This arrangement, which Dionysius of Halicarnassus has severely blamed, imparts to the work a kind of monotonous character; and yet, on the other hand, it must be confessed, that if this plan be in some respects a defective one, it is less so for the history of a single war, which naturally divides itself into campaigns, than it would be for a work intended to embrace the history of a people, or of some extended period of time.—Thucydides wrote in the Attic dialect: after him no historian ventured to employ any other, and his work is regarded as the canon, or perfection of Atticism. His style, however, is not without its faults: his conciseness sometimes degenerates into obscurity, particularly in his harangues; nor does he seem to be always very solicitous about the elegance of his diction, but more ambitious to communicate information than to please the ear. Against these and similar charges, of careless collocation, embarrassed periods, and solecistic phraseology, which Dionysius, in particular, is most active in adducing, the historian has been very successfully defended by one of his recent editors, Pöppe. Two among the Roman writers have taken Thucydides for their model, namely, Sallust and Tacitus; but they have imitated him each in a different manner. Tacitus has appropriated to himself the general manner of the Greek historian, his conciseness, his depth of thought; Sallust has conformed to him in his sentences and phrases more than in his ideas.—The most celebrated parts of Thucydides are the oration of Per-

icles, already referred to, and the description of the plague which ravaged Athens during the summer of Ol. 87.4, B.C. 430. The fearful picture which Thucydides here traces has been imitated by Lucretius and Virgil, particularly the former.—The best editions of Thucydides are, that of Hudson, *Oxon.*, 1696, fol.; that of Duker, *Amst.*, 1731, 2 vols. fol.; that of Gotleber and Bauer, *Lips.*, 1790–1804, 2 vols. 4to; that of Haack, *Stend.*, 1819, 2 vols. 8vo, reprinted by Valpy, *Lon.*, 1823, 3 vols. 8vo; that of Bekker, *Oxon.*, 1831, 4 vols. 8vo; that of Arnold, *Oxford*, 1830–5, 3 vols. 8vo; and especially that of Pöppe, *Lips.*, 1831–37, 12 vols. 8vo.—Dr. Bloomfield, vicar of Bishrooke, Rutland, England, has published a small edition with English notes, in 3 vols. 12mo, and also a new English version of the historian, with copious and valuable notes, in 3 vols. 8vo, *Lon.*, 1819.—II. A poet, mentioned by Marcellinus, the biographer of Thucydides. (Compare Pöppe, *Proleg.*, 1, p. 37.—Goeller, *Vit. Thucyd.*)

THULE, an island in the most northern parts of the German Ocean, called *ultima*, "farthest," on account of its remote situation, and its being regarded as the limit of geographical knowledge in this quarter. The Thule mentioned by Tacitus in his life of Agricola (c. 10), and which that commander discovered in circumnavigating Britain, coincides with *Mainland*, one of the Shetland Isles. The Thule spoken of by Pytheas, the ancient Greek navigator, was different from this. The relation of Pytheas is rather romantic in some of its features; as, for example, when he states that its climate was neither earth, air, nor sea, but a chaotic confusion of these three elements: from other parts of his narrative, however, many have been led to suppose that this Thule was modern Iceland or Norway. Mannert declares himself in favour of the former; D'Anville opposes it. Ptolemy places the middle of this Thule in 63° of latitude, and says that at the time of the equinoxes the days were twenty-four hours, which could not have been true at the equinoxes, but must have referred to the solstices, and therefore this island is supposed to have been in 66° 30' latitude, that is, under the polar circle. The Thule of which Procopius speaks, D'Anville makes to correspond with the modern canton of *Tylemark*, in Norway. The details of Procopius, however, seem to agree rather with the accounts that have been given of the state of ancient Lapland. Some modern geographers think that by Thule the ancients mean merely Scandinavia, of which their knowledge was very limited. (Mannert, *Geogr.*, vol. 1, p. 78.)

THURI, a city of Lucania, in Lower Italy, near the site of the more ancient Sybaris, and which was founded by a colony from Athens about fifty-five years after the overthrow of the latter city. Two celebrated characters are named among those who joined this expedition, which was collected from different parts of Greece; these were Herodotus, and Lyais the orator. (*Aristot.*, *de Rhet.*, 3, 9.—*Dion. Hal.*, *de Lys.*, p. 452.—*Suid.*, s. v. *Ἡρόδοτος* et *Λύσιος*.) Diodorus gives us a very full account of the foundation of this town, the form and manner in which it was built, and the constitution it adopted: its laws were framed chiefly after the code of the celebrated legislators Zaleucus and Charondas. (*Diod. Sic.*, 12, 10.) The government of Thuri seems to have excited the attention of Aristotle on more than one occasion. (*Polit.*, 5, 4, *seqq.*) This Athenian colony attained a considerable degree of prosperity and power: it entered into an alliance with Crotona, and engaged in hostilities with Tarentum, in order to obtain possession of the territory which formerly belonged to Siria. (*Strabo*, 264.) In the Peloponnesian war, the Thuriæ are mentioned as allied to the Athenians, and as furnishing them with some few ships and men for their Sicilian expedition. (*Thucyd.*, 7, 35.) Subsequent-

ly, the attacks of the Lœcæni, from whom they sustained a severe defeat, and, at a still later period, the enmity of the Tarentines, so reduced the power and prosperity of the Thuriæ, that they were compelled to seek the aid of Rome, which was thus involved in a war with Tarentum. About eighty-eight years afterward, Thurii, being nearly deserted, received a Roman colony, and took the name of Copia. (*Strab.*, 263.—*Liv.*, 35, 9.) Cæsar, however, calls it Thurii, and designates it a municipal town. (*Bell. Civ.*, 3, 22.) The remains of ancient Thurii must be placed between the site of ancient Sybaris and Terra Nova. (*Cramer's Ancient Italy*, vol. 2, p. 359.)

THURINIA, a name given to Augustus when he was young, either because some of his progenitors were natives of Thurii, or because his father Octavius had been successful in some military operations near Thurii a short time after the birth of Augustus. (*Sueton.*, *Vit. Aug.*, 7.—Consult *Oudendorp*, *ad loc.*)

THYAMIS, I. a river of Epirus, anciently dividing Thesprotia from the district of Cestrine. (*Thucyd.*, 1, 46.) The historian Phylarchus, as Athenæus reports (3, 3), affirmed that the Egyptian bean was never known to grow out of Egypt except in a marsh close to this river, and then only for a short period.—It appears from Cicero that Atticus had an estate on the banks of the Thyamis. (*Ad. Att.*, 7, 7.—Compare *Possess.*, 1, 11.) The modern name of this stream is the *Calama*. (*Cramer's Anc. Greece*, vol. 1, p. 108.)—II. A promontory of Epirus, near the river of the same name, now *Cape Nisi*.

THYATIRA (τὴ Θυατείρα), a city of Lydia, near the northern confines, situate on the small river Lycus, not far from its source. According to Pliny (5, 29), its original name was Pelopia; and Strabo (625) makes it to have been founded by a colony of Macedonians. It was enlarged by Seleucus Nicator, and was selected as a place of arms by Andronicus, who declared himself heir to the kingdom of Pergamus after the death of Attalus. Thyatira, according to Strabo, belonged originally to Mysia; from the time of Pliny, however, we find it ascribed to Lydia. Its ruins are now called *Al-Hisar*, or the white castle. This was one of the churches mentioned in the Revelations.—For an interesting account of the church in Thyatira, consult *Milner's History of the Seven Churches of Asia*, p. 277, seqq., *London*, 1833.

THYESTES, a son of Pelops and Hippodamia, and grandson of Tantalus; for the legend relating to whom, consult the article *Atræus*.

THYMBRÆ, a plain in Troas, through which a small river, called Thymbræus, flows in its course to the Scamander. According to some, the river Thymbræus is now the *Kamar-sou*. (*Cramer's Asia Minor*, vol. 1, p. 103.) Apollo had a temple here, whence he was surnamed *Thymbræus*. (*Il.*, 10, 430.—*Virg.*, *Æn.*, 3, 85.—*Eurip.*, *Rhes.*, 224.) It was in this temple that Achilles is said to have been mortally wounded by Paris. (*Ætolath. ad R.*, 10, 432.—*Serv. ad Æn.*, l. c.)

THYMBRÆUS, a surname of Apollo. (*Vid. Thymbræ*.)

THYMYSTES, I. a king of Athens, son of Oxinthes, the last of the descendants of Theseus who reigned at Athens. He was deposed because he refused to meet Xanthus, the Boeotian monarch, in single combat. Melanthus the Messenian accepted the challenge, slew Xanthus, and was rewarded with the kingdom of Attica. (*Vid. Melanthus*).—II. A Trojan prince, whose wife and son were put to death by order of Priam. (*Tzetx.* *ad Lycophr.*, 234.—*Burmman*, *ad Virg.*, *Æn.*, 2, 32.) He is said, on this account, to have used his best endeavours to persuade his countrymen to admit the wooden horse within their walls. (*Virg.*, *Æn.*, 2, 32.—*Servius ad Æn.*, l. c.)—III. A son of Hecaton, who accompanied Æneas into Italy,

and was killed by Turnus. (*Virg.*, *Æn.*, 10, 122.—*Id. ib.*, 12, 864.)

TURNI, a people of Bithynia. (*Vid. Bithynia*.)

ΤΥΡΩΝ, a name given to Semele after she had been translated to the skies. The appellation comes either from *τύω*, to sacrifice, or *τύω*, "to rage, to be agitated." The latter is the more probable derivation. (*Apollod.*, 3, 5, 3.—*Diod. Sic.*, 4, 25.—*Heyne ad Apollod.*, l. c.)

ΤΥΡΩΝΙΟΣ (three syllables), a surname of Bacchus, from his mother Semele, who was called *Thyone*. (*Vid. Thyone*.)

ΤΥΡΩΝΑ, the principal town of Cynuria, in Argolis, near which the celebrated battle was fought between the Spartans and an equal number of Argives. (*Vid. Othryades*.) It was probably situate not far from the modern town of *Astro*. (*Herod.*, 1, 82.)—The Spartans established the *Æginetæ* here upon the expulsion of that people from their island by the Athenians. (*Thucyd.*, 2, 27.) During the Peloponnesian war, however, the latter, having landed on the Cynurian coast, captured the town, and setting it on fire, carried off all the inhabitants. (*Id.*, 4, 56.—*Cramer's Anc. Greece*, vol. 3, p. 285.)

ΤΥΡΩΣΑΓΓΕΛΑ, a people of Sarmatia, who lived by hunting. Herodotus makes the Tanais rise in their territory.—II. or *Thyræageta*, a nation of European Sarmatia, dwelling on the banks of the Tanais, where the same river approaches nearest to the Wolga, and in the neighbourhood of the *Iyræ*. (*Hardouin ad Plin.*, 6, 7.)

TIBERIAS, a town of Galilee, built by Herod Agrippa, and named in honour of the Emperor Tiberius. It was situate on the western shore, and near the southern extremity of the Sea of Tiberias. This piece of water or lake was previously called by the name of Genesareth, from a pleasant district called Geneser, at the northern extremity of the lake. Tiberias was taken and destroyed by Vespasian; but, after the fall of Jerusalem, it gradually rose again into notice. It is often mentioned by the Jewish writers, because, after the taking of Jerusalem, there was at Tiberias a succession of Hebrew judges and doctors till the fourth century. Epiphanius says that a Hebrew translation of St. John and the Acts of the Apostles was kept in this city. (*Joseph.*, *Ant. Jud.*, 18, 3.—*Id.*, *Bell. Jud.*, 2, 8.—*Id. ibid.*, 3, 16.) The modern name is *Tabaria*.

TIBERIVS, son of Capetus and king of Alba, was drowned in the river Albula, which on that account assumed his name, and was called *Tiberis*. (*Liv.*, 1, 3.—*Cic.*, *N. D.*, 2, 20.—*Varro*, *de L. L.*, 4, 5, &c.—*Ovid.*, *Fast.*, 3, 389; 4, 47.)

TIBERIS, TYBERIS, TYBER, or TIBRIS, a river of Italy, on whose banks the city of Rome was built. It is said to have been originally called *Albula*, from the whiteness of its waters, and afterward Tiberis when Tiberinus, king of Alba, had been drowned there; but it is probable that *Albula* was the Latin name of the river, and *Tiberis* or *Tidris* the Tuscan one. Varro informs us that a prince of the Veientes, named *Delebris*, gave his name to the stream, and that out of this grew in time the appellations Tiberis and Tidris. It is often called by the Greeks *Thymbræ* (ὁ Θυμβραῖς).—With respect to its source, Pliny informs us (3, 5) that it rises in the Apennines above Arretium, and that it is joined, during a course of nearly one hundred and fifty miles, by upward of forty tributary streams. The Tiber was capable of receiving vessels of considerable burden at Rome, and small boats to within a short distance of its source. (*Dion. Hal.*, 3, 44.—*Strab.*, 218.) Virgil is the only author who applies the epithet of *caruleus* to the waters of the Tiber. (*Æn.*, 8, 62.) That of *flavus*, "yellow," is well known to be much more general. (*Ovid.*, *Trist.*, 5, 1.—*Horat.*, *Od.*, 1, 3, 13.) This stream is also called

Tyrrhæus amnis, "the Tuscan river," from its watering Etruria on one side in its course, and also *Lydius*, "the Lydian" stream or Tiber, on account of the popular tradition which traced the arts and civilization of Etruria to Lydia in Asia Minor. (*Vid. Hetruria.*)

TIBERIUS, CLAUDIUS DRUSUS NERO, a Roman emperor, born B.C. 42. He was the son of a father of the same name, of the ancient Claudian family, and of Livia Drusilla, afterward the celebrated wife of Augustus. Rapidly raised to authority by the influence of his mother, he displayed no inconsiderable ability in an expedition against certain revolted Alpine tribes, in consequence of which he was raised to the consulship in his twenty-eighth year. On the death of Agrippa, the gravity and austerity of Tiberius having gained the emperor's confidence, he chose him to supply the place of that minister, obliging him, at the same time, to divorce Vipsania, the daughter of Agrippa, and wed Julia, the daughter of Augustus, whose flagitious conduct at length so disgusted him that he retired in a private capacity to the isle of Rhodes. After experiencing much discountenance from Augustus, the deaths of the two Cæsars, Caius and Lucius, induced the emperor to take him again into favour and adopt him. During the remainder of the life of Augustus he behaved with great prudence and ability, concluding a war with the Germans in such a manner as to merit a triumph. On the death of Augustus he succeeded without opposition to the empire.—The first act of the new reign was the murder of young Postumus Agrippa, the only surviving son of M. Vipsanius Agrippa, and whom Augustus had banished during his lifetime to the island of Planasia. From his bodily strength, although taken by surprise and defenceless, he was with difficulty overcome by the centurion employed. Like Elizabeth of England, Tiberius disavowed his own order. Surmise hesitated between himself and Livia; and an incredible pretext was set up of a command of the late emperor to the tribune who had the custody of the youth, that he was not to be suffered to survive him. While Tiberius proceeded immediately to the actual exercise of several of the imperial functions, such as delivering their standard to the prætorian guard, having them in attendance on his person, and despatching letters to the armies to announce his accession, he affected to depend on the pleasure of the senate, and to consider himself unequal to the weight of the whole empire. In the confused, dilatory, and ambiguous mode of his expressing, or rather hinting, his sentiments, which he often designed to be understood in a contrary sense to what they seemed to bear, he strongly resembled Cromwell.—The servility of the senate ran before his ambition. They had afterward leisure for repentance. Tiberius soon began to practise the dark, crooked, and sanguinary policy which marks the jealousy, distrust, and terror of a conscious and suspicious tyrant. Those who had formerly offended him, as Asinius Gallus, who had married his divorced wife Vipsania, and even those who had been pointed out by Augustus as men likely, by their talents or aspiring minds, to supply princes to the empire, should the road be open to them, were watched, circumvented, immured, and destroyed. The law of high treason was made an instrument of punishing, not actions merely, but looks, words, and gestures, which were construed as offences against the majesty of the prince. A spy-system was organized, which embraced informers and agitators of plots, who, while they enriched themselves, brought money to the treasury; and as a man's slaves, and the guests at his table, might themselves be secret pensioners of this new police of inspection, social confidence and domestic security were at once destroyed. Those who were suspected were presumed to be guilty; judges were easily found to condemn them; and confiscations and executions succeeded each other.—The

share which the people had retained of the right of election was entirely taken from them; the nomination of the consuls assumed by the emperor; and the choice of the other magistrates, though ostensibly referred to the senate, determined really by himself.—While Tiberius, by abolishing the comitia or assemblies, swept away the last vestige of popular liberty, and while he weakened the internal strength of the empire by shedding the best blood of Rome, and creating around him the solitude of death, he sacrificed her external glory to the same sleepless and devouring jealousy. This sentiment was not excited by those only who were aliens from his name, for those connected with him by the nearest ties were the objects of his most feverish dread and his most implacable malice. His own mother, who had sullied herself with crime to secure his elevation, was the first to attract his gloomy envy; which was awakened by her having been named in the will of Augustus as co-heiress with himself, and adopted into the Julian family by the name of Julia Augusta; and by the flatteries of the senate, who bestowed on Livia the surname of Mother of the Country, and who received from Tiberius the reproof, that "moderate honours were suitable to women." His forbidding her the state of a licitor to walk before her, and his irritation on her addressing the soldiery to animate their exertions in extinguishing a fire, may be traced to the same feeling. That another should divide with him the attributes of sovereignty was intolerable to his mind; but he was equally unable to endure that another should be popular in the city or successful in the field; and in his son and his nephew he beheld only presumptuous rivals of his own past renown in arms, supplanters of his power, and pretenders to his throne. Weighed against this sentiment of egotism, the security of the empire and the glory of the Roman eagles were as dust in the balance. Resting on his former laurels, he no longer led the armies in person, but substituted for open war the cunning of a mean, perfidious policy. It was thus that he detained in his dominions, after inviting them with the fair words of a specious hospitality, Marbodius, king of the Suevi, and Archelaus, king of Cappadocia, whose kingdom was reduced to a Roman province; and in the latter part of his life he fell into a total apathy and indifference respecting the state of the legions or of the foreign departments: left Spain and Syria for several years without governors, and allowed Armenia to be overrun by the Dacians, and Gaul by the neighbouring Germans. But the ancient fame of the Roman discipline and valour was supported in the beginning of his reign by the second Drusus and Germanicus, whom he therefore envied, detested, and destroyed.—By both the son and the nephew, the most essential and faithful services were rendered to Tiberius before his authority could well be said to be established. The Roman legions in Pannonia, either discontented with their stipend, or making that a pretence for expressing their dissatisfaction with the person of the new emperor, raised a mutiny, which Drusus suppressed. The same part was acted by the legions in Lower Germany, whom Germanicus harangued from the camp tribunal; and on their persisting to choose him emperor, pointed a sword at his breast, with the exclamation that "he had rather die than forfeit his fidelity." A soldier audaciously offered him another sword, telling him that "it was sharper:" his person was in danger, and he was carried to his tent by his friends; but, determining on the expedient of awakening the shame of the troops by expressing his distrust of their attachment and honour, he sent his wife Agrippina, the granddaughter of Augustus, from the camp, which she passed through, accompanied by her infant son Caius, and a retinue of weeping ladies. The soldiers, struck with compunction, crowded around her, imploring her re-

turn, made their submission, and demanded to be led against the enemy. Germanicus carried devastation into the fields and cities of the Marai, the Usipetes, and the Catti, whom he everywhere overthrew; recovered the standard of Varus, and, coming to a spot in the woods where the mouldering trenches of his camp were still visible, and the ground strewn with the whitened bones of his followers, collected them with funeral honours. Arminius, however, at the head of the Cherusci, by retiring into the forests, posting ambuscades, and inveigling the Romans into woody and marshy defiles, gained some advantages over the Cæsar himself, as well as his lieutenant Cæcina, though they were retrieved by extraordinary efforts of courage. Agrippina displayed a high spirit, and the most active devotion to the service of the troops, not only tending the wounded, but preventing, by her intrepidity, the breaking of a bridge on the Rhine, on a rumour of the advance of the Germans. Her conduct in these circumstances, as well as her previous share in the suppression of the mutiny, and even the fondling name of *Catigula*, bestowed by the camp on her young son, from the circumstance of his wearing the nailed buskin of the legionary soldiers, were each a source of deep suspicion and long-concealed resentment in the breast of Tiberius, which were fostered by the arts of insinuation familiar to his worthless minister Sejanus.—The appearance of commotions in the East, where Vonones, the king set over Parthia by the Romans, had been expelled by Artabanus, and had taken refuge in Armenia, afforded a pretext to the emperor for the recall of the Cæsar from the command of the legions in Germany. Obeying the mandate with dilatory haste, Germanicus signalized his departure by a final campaign with the Cherusci, whom he attacked on the Weser, and, surrounding their rear and flanks with his cavalry, defeated with prodigious slaughter (A.C. 16); Arminius himself owing his escape to the fleetness of his horse and the concealment of his visage, which was bathed in blood. After pushing his success as far as the Elbe, and sending to Rome the spoils and captives of his victories, and the painted representations of the rivers, mountains, and battles, Germanicus, as a mark of dissembled favour, was chosen by Tiberius his colleague in the consulate; and the province of Syria was assigned to him by a decree of the senate. But, previously to this appointment, his kinsman Silanus had been removed from the Syrian prefecture, and Cneus Piso, a man of a violent disposition, substituted in his room.—After agreeing to a treaty with Artabanus, by virtue of which Vonones was made to retire into Cilicia, and after placing Zonones on the throne of Armenia, Germanicus set out on a tour of curiosity and science to Egypt, where he sailed up the Nile and inspected the ruins of Thebes, the Pyramids, and the statue of Memnon, which emitted a sound when touched by the rays of the rising sun. Returning from Egypt, and finding that Piso had reversed many of his orders, he issued a mandate for him to quit the province, and enforced it, on being detained at Antioch by an illness, which he suspected had been produced by poison. After urging on Agrippina resignation and an absence from Rome, an advice which her proud courage forbade her to follow, he expired at a little more than thirty years of age (A.C. 19).—After his body had been burned in the forum of Antioch, Agrippina went on board a vessel and sailed for Italy. She landed at Brundisium amid the mingled sobs and tears of women and men, and advanced slowly, with downcast eyes, attended by two of her children, and bearing in her arms the urn which contained the ashes of her husband. The prætorian bands sent to escort the remains were followed by the whole senate and innumerable people, who beset the roads, and with audible condolence and sympathy attended her to the city. The emperor and Livia for-

bore to show themselves in public. The people wrote on the walls of the palace, "Restore Germanicus." Piso and his wife Plancina entered Rome amid the popular indignation, which was increased by the festivity apparent in their houses, which was situated near the forum. Piso, however, was accused of treason by Fulcinius; was neglected by Tiberius, who, affecting the coolest impartiality, referred the cause to the senate; and stabbed himself in prison. His wife, who had also deserted him, enjoyed afterward the favour of Livia and the emperor, to whom she was useful in calumniating Agrippina; but was at last herself exposed to criminal accusations, and died also by her own hand.—The widow of Germanicus remained at Rome, and persisted with a lofty determination to assert her rights. On her cousin Claudia Pulchra being accused of nuptial infidelity and treason, she sought an audience, and, finding the emperor sacrificing at the altar of Augustus, reproached him with the inconsistency of persecuting the Augustan posterity, to which he replied by catching her hand, and quoting a line from a Greek tragedy:

"Child! if thou canst not reign, deem'st it a wrong?"

He contrived an excuse for not inviting her to his table by having it suggested that some apples were poisoned, and then resenting her suspicions when she declined to accept them from his hand; and at last, on the plea that she had threatened to appeal to the army, and to take sanctuary at the statue of Augustus, he banished her to the isle of Pandataria. On this, she addressed him with spirited reproaches, when the dastardly tyrant had one of her eyes thrust out with rods by the hand of a centurion. Agrippina resolved to put an end to her life by abstinence from food (A.C. 26). Viands were forced into her mouth by the emperor's order, but his fear or his malice was disappointed by her unconquerable resolution. In the senate he magnified his own clemency in not having sentenced the wife of Germanicus to be strangled in the dungeon, exposed like a felon on the prison steps, and dragged by a hook into the Tiber. Drusus, the surviving heir, and the son of Tiberius by Agrippina Vipsania, who had been decreed a triumph for his services in Illyricum and in Germany, and had been admitted to a share of the tribunician power, was poisoned by Sejanus (A.C. 23), who had long cherished a sentiment of revenge for a blow received from Drusus, and had corrupted his wife Livia. The emperor entered the senate-house with an air of indifference before the body was interred, and shortened the time of public mourning, directing the shops to be opened as usual. His own mother, Livia Augusta, afforded him, by her death (A.C. 29), a similar occasion of evincing his superiority to the feelings of human nature; as he not only absented himself from her sick-bed, but, on a pretence of modesty, curtailed the funeral honours decreed to her by the senate.—The deadly favour of Tiberius was next extended to the eldest sons of Germanicus and Agrippina, who were adopted as heirs, as if in atonement for the savage injuries committed on their admirable parents. But, as adopted princes, vows for their health and safety were offered up by the pontiffs; and this proved the signal of informations of treason, the usual prelude of the emperor's judicial murders. They were accused of having aspersed his character, and the accusation was followed by the sentence and its execution. Nero was starved to death in the isle of Pontia, and Drusus in a secret chamber of the palace.—The daughters of Germanicus were spared by the tyrant, and disposed of in marriage: Agrippina to Cneus Domitius, the grandson of Octavia, sister of Augustus; Drusilla to Lucius Casaius; and Julia to Marcus Vinicius.—The presumptive heirs of the imperial family being removed, Sejanus thought the empire within his grasp. On pretence of discipline, he had removed the

pretorian bands, of which he was prefect, to a fortified camp without the city, between the Viminal and Esquiline gates; in the senate he secured to himself partisans by the distribution of provinces and honours, and gained entire ascendancy over the emperor by relieving him of the labours of state as well as administering to his luxury; by studying his humours, and breaking into his ear the whispers of a state informer. A dissembler to all others, Tiberius was open to Sejanus; and easily yielding to him entire and unsuspecting confidence, was persuaded to withdraw from the cares of state. The plot was detected, and Antonia, the mother of Germanicus, was the accuser of Sejanus. Impeached by letters from the emperor, condemned by the senate, and deserted by the pretorian guards, he was strangled by the public executioner, and his body was torn piecemeal by the populace (A.D. 31). The vengeance of Tiberius pursued his friends and adherents, and even wreaked its rage on the innocent childhood of his son and his daughter.—Tiberius continued to hide himself from the gaze of Rome and from the light of day, among the groves and grottoes of the island of Capreae, which he peopled with the partners of his impure orgies, dressed in fantastic disguises of wood-nymphs and satyrs. But the time approached when the world was to be rid of this monster of his species. His sick-bed was attended by that Caligula, the only surviving son of Germanicus, whose cunning had baffled the insidiousness of his agitators of treason, and whose obsequiousness imposed upon himself; but who had not been always able to elude his penetration, and of whom, when his life was begged, which had been three times threatened, he had predicted, with the tact of a conational mind, that "Caligula would prove a serpent to swallow Rome, and a Phaëthon to set the world on fire." For the purpose of ascertaining whether the lethargy in which the emperor lay was actually death, Caligula approached and attempted to draw the ring from his finger; it resisted; and on the bold suggestion of Macro, the new pretorian prefect, pillows were pressed upon him, and the hand of her son avenged, though late, the names of Agrippina (A.D. 31, aged 78).—Tiberius was a crafty speaker, was literary, addicted to astrology, and, like Augustus, apprehensive of thunder, as a preservative against which he wore a laurel crown. In his person he was tall and robust, broad in the shoulders, and so strong in the muscles that he could bore a hard apple with his finger, and wound the scalp of a boy with a filip. His face was fair complexioned, and would have been handsome if it had not been disfigured by carbuncles, for which he used cosmetics. His eyes were prodigiously large, and could discern objects in the dark. He wore his hair long in the neck, contrary to the Roman usage; walked erect, with a stiff neck; seldom accosted any one; and, when he spoke, used a wave of the hand as in condescension.—The news of the tyrant's death was received at Rome with popular cries of "Tiberius to the Tiber!" His body was, however, borne to the city by the soldiers, and burned with funeral rites. In his will, Caligula, and Tiberius the son of the younger Drusus, were named as his heirs, with a reversion to the survivor. (Sueton., *Vit. Tib.*—Tacit., *Ann.*, lib. 1, 2, 3, &c.—Ellon's *Roman Emperors*, p. 47, seqq.)

TIBISCU, now the *Teisse*, a river of Dacia, called also *Pathyscus*, falling into the Danube, and forming the western limit of Dacia. (Plin., 4, 12.—*Ammian. Marcell.*, 17, 3)—II. (or Tibiscum), a city of Dacia, on the river *Temes*, one of the tributaries of the Danube, and near the junction of the *Bistra* with the former stream. It is now the *Cavarna*. (*Biachoff and Nölker. Wörterb. der Geogr.*, p. 970.)

TIBRIS. *Vid.* Tiberis.

TIBULLA, a town of Sardinia, on the northern coast, and on the strait which separates that island from Cor-

sica; hence it became a usual landing-place. It is now *Longo Sardo*. (*Ptol.—Itin. Ant.*, 72.)

TIBULLUS, AULUS ALBIUS, a Roman knight, celebrated for his poetical compositions. There exists some doubt respecting the period of his birth. Petrus Crinitus and Lylius Gyraldus, the ancient but inaccurate biographers of the Roman poets, relying on two lines erroneously ascribed to Tibullus, and inserted in the fifth elegy of the third book,

*Natalem nostri primum videre parentes
Quum cecidit falo consul uterque pari,*

had maintained that he was born A.U.C. 711, in which year the two consuls Hirtius and Pansa were mortally wounded at the battle of Mutina. Julius Scaliger was the first commentator who suspected that these verses were interpolated, and his opinion has been confirmed by Janus Dones, who has shown, at great length, that the chronology they would establish could by no means be reconciled with dates which must be assigned to various events in the life of the poet. He conjectures that the lines which had occasioned the common error with regard to the birth of Tibullus were interpolated in his elegies from the works of Ovid, in whose *Tristia* they occur (4, 10). Dones was followed by Brookhousius and Vulpinus, who all seem right in placing the birth of Tibullus earlier than A.U.C. 711; but it would not appear that they had adduced sufficient authority for carrying it quite so far back as 690, which they have fixed on for the epoch of his birth. It appears from an epigram of Domitius Marsus, a contemporary of Tibullus, that he ceased to live about the same time with Virgil. But Virgil died in 734, and, had Tibullus been born so early as 690, he must have reached the age of forty-four at the time of his decease, which is scarcely consistent with the premature death deplored by his contemporaries, or the epithet *Juvenis* applied to him in this very epigram of Domitius Marsus. On the whole, his birth may be safely conjectured to have occurred between A.U.C. 685 and 700. It has been remarked, that few of the great Latin poets, orators, or historians were born at Rome, and that, if the capital had always confined the distinction of Romans to the ancient families within the walls, her name would have been deprived of some of its noblest ornaments. Tibullus, however, is one of the exceptions, as his birth, in whatever year it may have happened, unquestionably took place in the capital. He was descended of an equestrian family of considerable wealth and possessions, though little known or mentioned in the history of their country. His father had been engaged on the side of Pompey in the civil wars, and died soon after Cæsar had finally triumphed over the liberties of Rome. It is said, but without any sufficient authority, that Tibullus himself was present at Philippi, along with his friend Messala, in the ranks of the republican army. He retired in early life to his paternal villa near *Padana*. In his youth he had tasted the sweets of affluence and fortune, but the ample patrimony he had inherited from his ancestors was greatly diminished by the partitions of land made to the soldiery of the triumvirs. Dacier and other French critics have alleged that he was ruined by his own dissipation and extravagance, which has been denied by Vulpinus and Brookhousius, the learned editors and commentators of Tibullus, with the same eagerness as if their own fame and fortune depended upon the question. The partition of the lands in Italy was probably the chief cause of his indigence; but it is not unlikely that his own extravagance may have contributed to his early difficulties. He utters his complaints of the venality of his mistresses and favourites in terms which show that he had already suffered from their rapacity. Nevertheless, he expresses himself as if prepared to part with everything to gratify their cupidity. It seems probable

that no part of the land of which Tibullus had been deprived was restored to him, as we find not in his elegies a single expression of gratitude or compliment, from which it might be conjectured that Augustus had atoned to him for the wrongs of Octavia. It is evident, however, that he was not reduced to extreme want. It might even be inferred, from a distich in one of his elegies (3, 4), that his chief paternal seat had been preserved to him :

*"Quintem sedes jubeat ei vendere avitas
Ite sub imperium, sub titulumque, Lares."*

Horace, too, in a complimentary epistle (1, 4), written long after the partition of the lands, says that the gods had bestowed on him wealth, and the art of enjoying it :

"Di tibi divitias dederunt, artemque fruendi."

His own idea of the enjoyment of such wealth as he possessed seems to have been (judging, at least, from his poems) a rural life of tranquillity and repose, of which the sole employment should consist in the peaceful avocations of husbandry, and the leisure hours should be devoted to the Muses or to pleasure. His friendship, however, for Messala, and, perhaps, some hope of improving his moderate and diminished fortune, induced him to attend that celebrated commander in various military expeditions. It would appear that he had accompanied him in not less than three. But the precise periods at which they were undertaken, and the order in which they succeeded each other, are subjects involved in much uncertainty and contradiction. The first was commenced in 719, against the Sallassi, a fierce and warlike people, who inhabited the Pennine or Graian Alps, and from their fastnesses had long bid defiance to every effort made by a regular army for their subjugation.—His next expedition with Messala was to Aquitanic Gaul. That province having revolted in 724, Messala was intrusted with the task of reducing it to obedience; and he proceeded on this service immediately after the battle of Actium. Several sharp actions took place, in which Tibullus signalized his courage; and the success of this campaign, if we may believe himself, was in no small degree attributable to his bravery and exertions. In the following season, Messala, being intrusted by the emperor with an extraordinary command in the East, requested Tibullus to accompany him; and to this proposal our poet, though, it would appear, with some reluctance, at length consented. He had not, however, been long at sea, when his health suffered so severely that he was obliged to be put on shore at an island, which Tibullus names by its poetical appellation of Phœacia, but which was then commonly called Corcyra, now *Corfu*. He soon recovered from this dangerous sickness, and, as soon as he was able to renew his voyage, he joined Messala, and travelled with him through Syria, Cilicia, and Egypt. Having returned to Italy, he again retired to his farm at Pedum, where, though he occasionally visited the capital, he chiefly resided for the remainder of his life.—Tibullus was endued with elegant manners and a handsome person, which involved him in many licentious connexions. But, though devoted to pleasure, he at the same time drew closer his connexion with the most learned and polished of his countrymen, as Valgius, Macer, and Horace. He continued, likewise, an uninterrupted friendship with Messala, who was now at the height of his reputation, his home being the resort of the learned, and his patronage the surest passport to the gates of fame. Tibullus' enjoyment of this sort of life was considerably impaired by the state of his health, which had continued to be delicate ever since the illness with which he was attacked at Corcyra. His existence was protracted till 784, and his death, which happened in that year, was deplored by Ovid in a long

elegiac poem.—The events and circumstances of the life of Tibullus have exercised a remarkable influence on his writings. Those occurrences to which he was exposed tended to give a peculiar turn to his thoughts, and a peculiar colouring to his language. The Roman fair of the highest rank had become alike licentious and venal; and the property of those ancient possessors of the Italian soil, who had adhered to the republican party, was divided by unprincipled usurpers among their rapacious soldiery. Unhappy in love, and less prosperous in fortune than in early youth he had reason to anticipate, all that he utters on these topics is stamped with such reality, that no reader can suspect for a moment either that his complaints were borrowed from Greek sources, or were the mere creations of fancy. His feelings seem to have been too acute to permit him the possession of that perfect repose and equanimity of spirit which he justly accounted the chief blessing of life. That indifference to eminence and wealth, which Horace perhaps enjoyed, and which seems to have been so earnestly desired by Tibullus, was rather pretended by him than actually felt; and his inability to procure either the advantages of fortune or delights of contentment is the source of constant struggle and disappointment. Hence the irritability, melancholy, and changeableness of his temper. Such circumstances in the life; and such features in the character of Tibullus, will be found explanatory and illustrative of much which we find in his elegies. These elegies have been divided by German writers into *Erotic*, *Rural*, *Devotional*, and *Panegyric*. The chief ingredients in his poems are no doubt derived from such topics; but many of his elegies partake of all these qualities, and there are few of them which can be accounted as purely belonging to any of the above classes. The elegies, however, in which amatory sentiments predominate, are by far the most numerous.—One can scarcely be a poet and in love, it has been said, without also loving the country. Its scenes supply the sweetest images; there the shepherd has their cool retreats, and love-songs have their echoes. Accordingly, the pastoral delineations which occur in the elegies of Tibullus are closely interwoven with the erotic sentiments; and there are few, indeed, of his amorous verses which are not beautified by that reference to rural feelings which forms the great and characteristic charm of the works of the Latin poets. Again, as rural pictures are intermixed, in the elegies of Tibullus, with amatory sentiments and feelings, so his poems, which have been classed together as devotional, are closely connected with his pastoral verses. They are full of images of rural theology, and it is to the rustic and domestic gods that his devotion is chiefly paid. He renders thanks to these deities for the prosperity of his little farm, or piously prepares a festival to their honour.—His panegyrics on his friends form the least pleasing and least valuable part of the writings of Tibullus. This subject was not suited to the elegiac strain, or to the soft and tender genius of the poet. When he assumes the tone of familiar friendship, as in the poems on the birthdays of Messala and of his friend Cornutus, his compliments are easy and graceful. But his long and laboured panegyric on Messala, in the fourth book, written on occasion of his patron obtaining the consulship, shows how little he was qualified to excel in this species of composition. The compositions evidently most adapted to the genius of Tibullus are poems not merely written in elegiac verse, but which answer to our understanding of the word *Elegy* in the subject and sentiments. The tone of complaint best accords with his soul. He seems naturally to have been possessed of extreme sensibility; and at that period of life when the mind lays in its store of ideas for the future voyage, he had been subjected to much suffering and disappointment.

Hence, though his fortune afterward improved, he had acquired the habit of viewing objects as surrounded with a continual gloom; nor does any other poet so often introduce the dismal images of death. Even to the most joyous thoughts of Tibullus, some mournful or plaintive sentiment is generally united, and his most gay and smiling figures wear chaplets of cypress on their brows.—It has already been said, that Tibullus was no imitator of the Greeks, and he is certainly the most original of the Latin poets. His elegies were the overflowings of his sorrows, his mistress alone was the Muse that inspired him. In the few instances in which he has followed the Greeks, he has imitated them with much good taste, and sometimes even with improvements on the original.—The elegies of Tibullus are divided into four books.—These poems are commonly printed along with those of Catullus and Propertius. Of the editions of Tibullus separately, the best are, that of Brouckhusius, *Amstelod.*, 1708, 4to; that of Vulpinus, *Patav.*, 1749, 4to; that of Heyne, *Lips.*, 1755-77-98, 8vo; that of Wunderlich, *Lips.*, 1817, 8vo; that of Lachmann, *Berol.*, 1829, 8vo; and that of Diissen, *Götting.*, 1835, 2 vols. 8vo. (*Dunlop's Roman Lit.*, vol. 3, p. 283, seqq.)

TIBUR, an ancient town of Latium, northeast of Rome, on the banks of the Anio. According to Dionysius of Halicarnassus, it was originally a town of the Siculi, the most ancient inhabitants of Latium; and, as a proof of this fact, he mentions that the name of Sicelion was still attached to a portion of the place. (*Dion. Hal.*, 1, 16.) Tibur, however, lays claim to a more illustrious, though a later origin, having been founded, according to some authors, by Catillus, an officer of Evander, while others pretend that this Catillus was a son of Amphiaraus, who, with his two brothers, migrated to Italy, and, having conquered the Siculi, gave to one of their towns the name of Tibur, from his brother Tiburtus. From this account of Solinus (c. 8), as well as that of Dionysius, we may collect that Catillus was one of the Pelasgic chiefs, who, with the assistance of the Aborigines, formed settlements in Italy.—Tibur is one of the places that appear most frequently to have afforded an asylum to Roman fugitives. From what period it enjoyed the rights of a Roman city is not precisely known, but it was, in all probability, anterior to the civil wars of Marius and Sylla. The latter, indeed, is said to have deprived the Tiburtini of these privileges, but they regained them upon his abdication, and they were confirmed by the Emperor Claudius. Hercules was the deity held in the greatest veneration at Tibur; and his temple, on the foundations of which the present cathedral is said to be built, was famous throughout Italy. (*Strabo*, 238.) Hence the epithet of Herculean given by the poets to this city. The modern name of Tibur is *Tivoli*.—As regards the Sibyl of Tibur, *vid. Albunea*. (*Cramer's Anc. Italy*, vol. 2, p. 56.)

TIBURTUS, a brother of the founder of Tibur, which is hence often called *Tiburtia Mænia*. (*Vid. Tibur*.) He was one of the sons of Amphiaraus. (*Virg., Æn.*, 7, 679.)

TICINUM, a city of Cisalpine Gaul, situate on the river Ticinus, near its junction with the Padus. It was founded, according to Pliny (3, 17), by the Lævi and Marici, but, being placed on the left bank of the Ticinus, it would, of course, belong to the Insubres; and, in fact, Ptolemy (p. 64) ascribes it to that people. Tacitus is the first historian that makes mention of it. According to that historian (*Ann.*, 3, 5), Augustus advanced as far as Ticinum to meet the corpse of Drusus, the father of Germanicus, in the depth of winter, and from thence escorted it to Rome. It is also frequently noticed in his Histories. Ancient inscriptions give it the title of *municipium*. Under the Lombard

king, Ticinum assumed the name of Pavia, which, in process of time, has been changed to *Pavia*. (*Paul. Diacon., Rer. Lang.*, 2, 15.—*Cramer's Anc. Italy*, vol. 1, p. 53.)

TICINUS, now the *Tesino*, a river of Gallia Cisalpina, rising in the Leopontine Alps, near the sources of the Rhodanus, and falling into the Po near Ticinum. It traversed in its course the Lacus Verbanus, or *Lago Maggiore*. At the mouth of this river, the Romans, under Cornelius Scipio, the father of Scipio Africanus the Elder, were defeated by Hannibal.—Consult, in relation to this battle, the remarks of Cramer (*Anc. Italy*, vol. 1, p. 54, seqq.)

TIFATA, a mountain range of Campania, about a mile to the east of Capua. It was a branch of the Apennines, and now takes its name from the village of *Maddaloni*, near *Caserta*. The original signification of the word Tifata, according to Festus, answered to that of the Latin *aliceta*. This ridge is often noticed by Livy as a favourite position of Hannibal when in the vicinity of Capua (23, 36 et 39; 26, 5). Here also were two celebrated temples consecrated to Diana and Jove. (*Cramer's Anc. Italy*, vol. 2, p. 205.)

TIFERNUM, I. a town of Umbria, near the Metaurus, called hence, for distinction's sake, *Metaurense*. It is now *St. Angelo in Vado*. (*Pliny*, 3, 18.)—II. A town of Umbria, towards the sources of the Tiber, and on the left bank of that river, distinguished from that circumstance by the epithet of *Tiberinum*. Its site is supposed to be occupied by the modern *Citta di Castello*. Tifernum is chiefly known to us from the circumstance of its having been situated near the villa of the younger Pliny. (*Cramer's Anc. Italy*, vol. 1, p. 205.)—III. A town of Samnium, supposed to have stood near the *Ponte di Limosano*, on the right bank of the river Tifernus (now *Biferno*). The Mons Tifernus was near the source of the same river, above *Boiano*, and is now called *Monte Maiese*. (*Cramer's Anc. Italy*, vol. 2, p. 231.)

TIFERNUS, a mountain of Campania. (*Vid. Tifernum III.*)

TIGELLINUS, Sophonius, an infamous character in the reign of Nero, whose vices secured to him the favour of that corrupt emperor. He was præfect of the prætorian guards when the conspiracy against Nero was discovered, and for his services on that occasion the emperor bestowed upon him triumphal honours. Having gained, according to Tacitus, an entire ascendancy over the affections of Nero, he was, in some instances, the adviser of some of the worst acts of that prince, and in others the chief actor, without the knowledge of his master. He corrupted Nero at first, and then deserted him; and at last, to the great joy of all, he was compelled to put an end to his existence by order of Otho. (*Tacit., Ann.*, 14, 51, seqq.—*Id. ib.*, 15, 72.—*Id., Hist.*, 1, 72.)

TIGELLINUS, M. Hermogenes, a singer and musician, who stood high in the favour of Julius Cæsar, and afterward in that of Augustus. He seems to have been indebted for his elevation to a fine voice, and a courtly and insinuating address. His moral character may be inferred from those who are said in Horace (*Sat.*, 1, 2, 3) to have deplored his death, and on whom he would appear to have squandered much of his wealth. Cicero, in a letter to a friend, numbers Tigellinus among the "*familiarissimi*" of Cæsar, and describes him as "*hominem pestilentiorum patriæ suæ*," in allusion to the unwholesome atmosphere of Sardinia, of which island this individual was a native. (*Cic., Ep. ad Fam.*, 7, 24.) The scholiast informs us that Horace attacked Tigellinus because the latter derided his verses. (*Schol. ad Horat.*, l. c.)

TIGRANES, king of Armenia, the son-in-law and ally of Mithradates. He rendered himself master of Armenia Minor, Cappadocia, and Syria, but lost all

these conquests after the defeat of Mithradates. Lucullus, the Roman commander, invaded Armenia, and defeated, near Tigranocerta, the mixed and numerous army of Tigranes. (Vid. Lucullus.) The peace concluded in the year 63 B.C. left him only Armenia. (Vid. Mithradates VII.)

TIGRANOCERTA, the capital of Armenia, built by Tigranes during the Mithradatic war. It was situated to the east of the Tigris, on the river Nicephoria, and, according to Tacitus, stood on a hill nearly surrounded by the latter river. It was a large, rich, and powerful city. It was inhabited not only by Orientals, but also by many Grecian colonists, and likewise by captives who had been carried off by Tigranes from some of the Greek cities of Syria which had been conquered by him from the Seleucids. Lucullus, during the Mithradatic war, took it with difficulty, and found in it immense riches, and no less than 8,000 talents in ready money. The Roman commander sent home the greater part of the foreign inhabitants; but still the city remained, after this, no unimportant place. The remains of Tigranocerta are at *Sered* on the *Bitlis-Seo*. (Tac., Ann., 12, 50.—Id. *ibid.*, 14, 24.—Plin., 6, 9.)

TIGRIS, a large river of Asia, rising in the mountains of Armenia Major, in the district of Sophene, and falling into the Euphrates. A rising ground prevents it from proceeding to the Euphrates in the early part of its course. A deep ravine in the mountains above Amida, or *Diarbekir*, opens a passage for it, and it takes its speedy course across a territory which is very unequal, and has a powerful declivity. Its extreme rapidity, the natural effect of local circumstances, has procured for it the name of *Tigr* in the Median language, *Digitto* with the Syrians, *Deklat* or *Didklat* in Arabic, and *Hiddekel* in Hebrew; all which terms denote the flight of an arrow. (Wahl, *Vorder und Mittel Asien*, 1, p. 710.—Compare Rosenmüller, *ad Gen.*, 2, 14.) Besides this branch, which is best known to the moderns, Pliny has described to us, in detail, another, which issues from a chain of mountains, now the mountains of *Kurdistan*, to the west of the *Arseiss Palus* or *Lake of Van*. It passes by the *Lake Arethusa*, its course being checked by a part of Mount Taurus, it falls into a subterranean cavern called *Zoroander*, and appears again at the bottom of the mountain. The identity of its waters is shown by the reappearance of light bodies at its issue that have been thrown up into it above the place where it enters the mountains. It passes also by the *Lake Theopitis*, near *Arzanene* or *Erzen*, buries itself again in subterranean caverns, and reappears at the distance of twenty-five miles below, near *Nymphæum*. This branch joins the western Tigris. As the Tigris and Euphrates approach, the intermediate land loses its elevation, and is occupied by meadows and morasses. Several artificial communications, perhaps two or three of which are natural, form a prelude to the approaching junction of the rivers, which finally takes place near the modern *Koma*. The river formed by their junction was called *Pasitigris*, now *Shat-el-Arab*, or the river of Arabia. It has three principal mouths, besides a small outlet: these occupy a space of thirty-six miles. For farther particulars, *vid.* Euphrates. The Tigris, though a far less noble stream than the Euphrates, is one of the most celebrated rivers in history, and many famous cities, at various periods, have decorated its banks: among these may be mentioned Nineveh, Seleucia, Ctesiphon, and, in modern times, *Bagdad*, *Mousul*, *Diarbekir*. The length of the Tigris is eight hundred miles. (Herod., 1, 89.—Id., 5, 52.—Id., 6, 20.—Polyb., 5, 46.—Tac., Ann., 6, 37.—Id. *ibid.*, 12, 13.—Mela, 1, 2.—Id., 3, 8.—Plin., 2, 103.—Id., 6, 9.—Mallet-Brun, *Geogr.*, vol. 2, p. 191, Ann. ed.)

TIGRANI, a warlike people among the Helvetii,

whose territory is supposed to have answered to the modern *Zurich*. Considerable doubt, however, has been thrown upon the correctness of this opinion. (Ouseek Lemaire, *Ind. Geogr. ad Cas.*, s. v.—Oberlin, *ad Cas.*, B. G., 1, 37.)

TIMŌUS, now the *Timok*, a river of *Moesia* falling into the Danube. (Plin., 3, 26.)

TIMŌUS, I. a Pythagorean philosopher, a native of Locri, born about B.C. 380. He was a preceptor of Plato's. We have remaining of his productions only a single work (if indeed this be his), written in the Doric dialect, and treating "of the Soul of the World and of Nature" (*περί ψυχῆς κόσμου καὶ φύσεως*). There exists, however, much uncertainty as to its being the work of Timæus or not. Tennemann (*Syst. der Plat. Phil.*, vol. 1, p. 93) attempts to prove that it is merely an extract from the *Timæus* of Plato. Other critics, on the contrary, charge Plato with copying from this work into his dialogue. We owe the preservation of this piece of Timæus' to Proclus, who has placed it at the head of his commentary on Plato's *Timæus*. (Schöll, *Hist. Lit. Gr.*, vol. 2, p. 213.)—II. A native of Tauromenium, in Sicily, who flourished about 260 B.C. Having been driven into exile by Agathocles, he repaired to Athens, where he occupied himself with the composition of a great historical work on the affairs of Greece, on those of Sicily, the wars of Pyrrhus, of Agathocles, &c. It bore the title of *Ἑλληνικὰ καὶ Σικελικὰ*, or, rather, *Τραλικά καὶ Σικελικά*, and was divided into more than 40 books. It appears, from a passage in Polybius (3, 32), that this work did not contain a synchronistic relation of events, but consisted rather of detached portions of history, in each of which the author treated separately of some important event. Cicero cites Timæus as a model of what was called the "Asiatic" style. (*Brut.*, c. 95.—*De Orat.*, 2, 18.) Polybius, and, after him, Diodorus Siculus, have charged Timæus with credulity and unfairness. Naturally gloomy and morose, he was exasperated by the treatment which he had experienced from Agathocles. His ill-humour, however (if it may be so termed), never degenerated into misanthropy; he was even open at times to kindly affections. Timæus was the hero whom he admired; and Cicero says that the former owed a part of his glory to the circumstance of his having had such an historian of his exploits as Timæus. (*Ep. ad Fam.*, 4, 19.) The ancients praised his geographical knowledge, and his care in indicating the chronology of the events which he describes. He appears also to have composed another work, on the "Olympiads," and it is said he was the first historical writer that employed this era. Longinus, after speaking of Timæus as in general an able, well-informed, and sensible writer, charges him with frequent puerilities and frigid expressions, which he ascribes to an over-eagerness for novelty of ideas and language. (*Long.*, § 4.)—We have only some fragments remaining of the historical work. These have been collected by Götter, in his treatise "*De Situ et Origine Syracusarum*," p. 209, *seqq.* (Schöll, *Hist. Lit. Gr.*, vol. 3, p. 219, *seqq.*)—III. A sophist of the third century of our era, who wrote a book called *Lexicon vocum Platoniarum*. It was edited with great ability by Ruhnken, *Lugd. Bat.*, 1754, 8vo.—A later edition of this same, containing all Ruhnken's notes, appeared from the Leipzig press in 1828, 8vo, under the editorial care of Koch.—As regards the period when he is supposed to have flourished, consult the remarks of Ruhnken (*Præf.*, p. xiv.).

TIMAGĒNES, a native of Alexandria, son of the banker of Ptolemy Auletes. Having been reduced to slavery when the city was taken by Gabinus (55 B.C.), he was brought to Rome, and sold to Faustus, the son of Sylla, who gave him his freedom. He exercised, after this, the profession of a cook, and then that of a litter-bearer (*lacticarius*). Abandoning, subsequently, this

humble employment, he set up as a teacher of rhetoric, and met with brilliant success. His society was much sought after on account of his agreeable manners and intellectual qualities; but his passion for uttering *bons mots* ruined all his prospects. Augustus, it seems, had appointed him his historiographer, and extended his favour to him in a marked degree, until, offended by a witty speech of Timagenes, he forbade him his presence. In the resentment of the moment, Timagenes burned the history which he had composed of the reign of Augustus, and retired to Tusculum, where he enjoyed the patronage and protection of Asinius Pollio. In this retreat he wrote a History of Alexander and his successors, entitled *περί βασιλέων* ("Of Kings"). This work formed one of the principal sources whence Quintus Curtius drew the materials of his historical romance. Timagenes, after this, fixed his residence at the very extremity of the empire, in Drapaeum, a city of Orchoene, where he ended his days. It is on account of his residence in this part of the East that some authors give him the epithet of "the Syrian." Besides his History of Alexander, Timagenes also published a work on the Gauls, which is cited by Ammianus Marcellinus and Plutarch. (Bonamy, *Recherches sur l'historien Timagène*.—*Mém. de l'Acad. des Inscri.*, &c., vol. 13, p. 35.) Vossius distinguishes between Timagenes the Alexandrian and Timagenes the Syrian, but in this he is wrong. (Scholl, *Hist. Lit. Gr.*, vol. 4, p. 75.)

TIMANTHES, I. a painter, said by Eustathius (*ad Il.*, 24, 163) to have been a native of Sicily, but by Quintilian (2, 13), of Cythrus. He was a contemporary of Zeuxis and Parrhasius (*Plin.*, 36, 9, 36), and must, consequently, have lived about Olymp. 96. The most important passage relating to him is in Pliny (36, 10, 36).—Timanthes has not been so much brought forward in the annals of art as Zeuxis and Parrhasius; but, as far as we have means given us of judging, he was, at least, inferior to neither in genius. He seems to have thrown a large share of intellect and thought into his productions. He appears to have been unequalled both in ingenuity and feeling, of which we have some remarkable examples. One of these was displayed in the picture on the noble subject of the sacrifice of Iphigenia, in which he represented the tender and beautiful virgin standing before the altar awaiting her doom, and surrounded by her afflicted relatives. All these last he depicted as moved by various degrees of sorrow, and grief seemed to have reached its utmost expression in the face of Menelaus; but that of Agamemnon was left; and the painter, heightening the interest of the piece by a forbearance of judgment, often erroneously regarded as a confession of the inadequacy of his art, covered the head of the father with his mantle, and left his agony to the imagination of the spectators.—In Fuseli's *Lecture on Ancient Art*, this painting of Timanthes is made the subject of a full and very able criticism, in the course of which he dissenting expressly from the opinion of Sir Joshua Reynolds, who agreed with M. Falconet in regarding the circumstance of the mantle-enveloped face of Agamemnon as little better than a mere trick on the part of the artist. The remarks of Fuseli, in answer to this and similar animadversions, are worthy of being quoted: "Neither the French nor the English critic appeared to me to have comprehended the real motive of Timanthes; they ascribe to impotence what was the forbearance of judgment. Timanthes felt like a father; he did not bide the face of Agamemnon because it was beyond the power of his art, nor because it was beyond the possibility, but because it was beyond the dignity of expression; because the inspiring feature of paternal affection at that moment, and the action which, of necessity, must have accompanied it, would either have destroyed the grandeur of the character and the solemnity of the scene, or sub-

jected the painter, with the majority of his judges, to the imputation of insensibility. He must either have represented him in tears, or convulsed at the flash of the uplifted steel, forgetting the chief in the father, and in that state of stupefaction which levels all features and deadens expression. He might, indeed, have chosen a fourth mode; he might have exhibited him fainting and palsied in the arms of his attendants, and, by this confusion of male and female character, merited the applause of every theatre in Paris. But Timanthes had too true a sense of nature to expose a father's feelings or to tear a passion to rage; nor had the Greeks yet learned of Rome to steel the face. If he made Agamemnon bear his calamity as a man, he made him also feel it as a man. It became the leader of Greece to sanction the ceremony with his presence; it did not become the father to see the daughter beneath the dagger's point: the same nature that threw a real mantle over the face of Timoleon, when he assisted at the punishment of his brother, taught Timanthes to throw an imaginary one over the face of Agamemnon; neither height nor depth, but propriety of expression, was his aim." (Fuseli, *Lecture on Anc. Art.*—*Works*, vol. 2, p. 49.)—This celebrated piece was painted, as Quintilian informs us, in contest with Colotes of Teos, a painter and sculptor from the school of Phidias, and it was crowned with victory at the rival exhibition. (Quintil., 2, 13.—*Cic.*, *Orat.*, 22, § 74.—*Eustath.*, l. c.)—On another occasion, having painted a sleeping Cyclops in an exceedingly small compass, yet wishing to convey the idea of his gigantic size, he introduced a group of Satyrs, measuring his thumb with a thyrsus. A deep meaning was to be discovered in every work of his pencil: yet the tendency to expression and significant delineation did not detract from the beauty of the forms which he created; for his figure of a prince was so perfect in its proportion and so majestic in its air, that it appears to have reached the utmost height of the ideal. This picture was preserved in the temple of Peace at Rome. (*Encyclop. Métropol.*, div. 2, vol. 1, p. 407.—*Sillig. Dict. Art.*, s. v.)—II. A painter, who flourished in the age of Aratus, and made a picture representing the battle between this general and the Ætolians, near Pellene. (*Plin.*, *Vit. Arat.*, c. 32.—*Sillig. Dict. Art.*, s. v.)

TIMAVUS, a celebrated stream of Italy, in the territory of Venetia, northeast of Aquileia, and falling into the Adriatic. Few streams have been more celebrated in antiquity or more sung by the poets than the Timavus. Its numerous sources, its lake and subterranean passage, which have been the theme of the Latin muse from Virgil to Claudian and Ausonius, are now so little known, that their existence has even been questioned, and ascribed to poetical invention. It has, however, been well ascertained, that the name of Timas is still preserved by some springs which rise near *S. Giovanni di Carso* and the castle of *Duina*, and form a river, which, after a course of little more than a mile, falls into the Adriatic. The number of these sources seems to vary according to the difference of the seasons, which circumstance will account for the various statements made by ancient writers respecting them. Strabo, who appears to derive his information from Polybius, reckoned seven, all of which, with the exception of one, were salt. According to Posidonius, the river really rose in the mountains at some distance from the sea, and disappeared under ground for the space of fourteen miles, when it issued forth again near the sea at the springs above mentioned. (Strabo, 215.—Pliny, 2, 106.) This account seems also verified by actual observation. (Cramer's *Anc. Italy*, vol. 1, p. 130.)

TIMOLEON, a Corinthian of noble birth and distinguished ability as a warrior and statesman. His brother Timophanes having, partly by popularity and partly

by the aid of a mercenary force, made himself tyrant of Corinth, Timoleon, after vain remonstrance, came to him with a kinsman of his, brother to the wife of Timophanes, and a friend named Theopompus, and, covering his own face, stood by while the others slew him. When the Syracusan ambassadors arrived to seek aid from Corinth against their tyrants, the deed was recent, and all Corinth was in a ferment; some extolling Timoleon as the most magnanimous of patriots, others execrating him as a fratricide. The request of the Syracusans offered to the Corinthians the means of calming their dissensions by the removal of the obnoxious individual, and to Timoleon a field of honourable action, in which he might escape from the misgivings of his own mind and the reproaches of his mother, who never forgave him. Timoleon proceeded to Sicily with a small band of mercenaries, principally raised by his own credit. On arriving he received considerable re-enforcements, and soon gained a footing in Syracuse. The greater part of the city had already been taken by Hicetes from Dionysius, and the whole was divided between three parties, each hostile to both the others. Timoleon was, in the end, successful. Hicetes withdrew to Leontini, and Dionysius surrendered, himself and his friends retiring to Corinth; while two thousand mercenaries of the garrison engaged in the service of Timoleon. This final expulsion of Dionysius took place fifty years after the rise of his father, and four years after the landing of Timoleon in Sicily (B.C. 343). Timoleon remained master of a city, the largest of all in the Grecian settlements; but almost a desert, through the multitudes slain or driven into banishment in successive revolutions. So great, it is said, was the desolation, that the horses of the cavalry grazed in the market-place, while the grooms slept at their ease on the luxuriant herbage. The winter was passed in assigning deserted lands and houses as a provision to the few remaining Syracusans of the Corinthian party and to the mercenaries instead of pay, which the general had not to give. In winter, when Grecian warfare was slackened or interrupted, the possession of good houses would doubtless be gratifying; but to men unused to peaceful labour, lands without slaves and cattle were of little worth; and it was necessary, in the spring, to find them some profitable employment. Unable sufficiently to supply the wants of his soldiers from any Grecian enemy, Timoleon sent one thousand men into the territory belonging to Carthage, and gathered thence abundance of spoil. The measure may seem rash, but he probably knew that an invasion was preparing, and that quiescence would not avert the storm, while a rich booty would make his soldiers meet it better. The Carthaginians landed in Sicily. Their force is stated at seventy thousand foot and ten thousand horse; while Timoleon could only muster three thousand Syracusans and nine thousand mercenaries. Nevertheless, he advanced to meet them in their own possessions; and, by the union of admirable conduct with singular good fortune, won a glorious victory, which was soon followed by an honourable peace. Timoleon, professing to be the liberator of Sicily, next directed his arms against the various chiefs or tyrants who held dominion in the towns. In this he may probably have been actuated by a sincere hatred of such governments; but he frequently seems to have little consulted the wishes of the people, whose deliverer he declared himself. Most of the smaller chiefs withdrew; the more powerful, resisting, were conquered; and, being given up to their political adversaries, were put to death—in some cases with studied cruelty. Among the victims was Hicetes, who was submitted, with his whole family, to the judgment of that mixed multitude now called the Syracusan people, and all were put death. There is much appearance that Hicetes deserved his fate; but what shall we say of the people which down-

ed to death his unoffending wife and daughters? and what of the general, who, holding little less than absolute authority over his followers, referred such a matter to the decision of such a body? Having everywhere established for Syracuse and for himself a superintending authority, which rested on the support of a prevailing party, like the control of Athens or Lacedæmon over their allies, Timoleon sought to restore good order, abundance, and population to the long-afflicted island. Syracuse was still very thinly peopled, and it was torn by mutual jealousy between the remnant of the ancient Syracusans, and the numerous mercenaries and foreign adventurers who had been rewarded for their services with lands and houses, and admission to all the rights of citizens. At one time the struggle ripened to a civil war, of which we know not the circumstances or the issue; but probably it was suppressed without the ruin of either party. At once to supply the void in the city and to strengthen his government by a body of adherents who owed their all to him, Timoleon invited colonists from Greece, and settled at one time four thousand families on the Syracusan territory, and on a neighbouring plain of great extent and fertility no less than ten thousand. Similar measures were adopted in many of the other cities under his control. He revised the ancient laws of Syracuse, and restored them with amendments skilfully adapted to the altered state of the commonwealth. But to amalgamate into a united people so many bodies of men of various interests, and mostly trained to war and violence, was a work only to be accomplished by the energy of one able man; and in accomplishing that work, Timoleon was both enabled and obliged, by the lawless habits of his followers, to exercise an authority not less arbitrary than that of any tyrant he had overthrown. In one most important particular he is superior, not only to those chiefs, as Gelon and Dionysius, and to all who ever held like power in Sicily, but perhaps to all, with the single exception of Washington, who have ever risen to the highest power in times of tumult; for he appears to have directed his efforts honestly and wisely to the object, not of establishing a dynasty of princes, but of so settling the government and training the people that they should be able, after his death, to govern themselves without an arbitrary leader. He died highly honored and generally beloved; and, for many years after his death, the whole of Sicily continued in unusual quiet and growing prosperity. Yet, in doing justice to the great qualities of Timoleon, and the sincerity of his zeal for the public good, we cannot but own that he was unscrupulous in the choice of means, even beyond the ordinary laxity of political morality in Greece, and that his fame is tarnished by some acts of atrocious cruelty and of gross injustice. (*Corn. Nep., Vit. Timol.—Plut., Vit. Timol.—History of Greece (Lib. Us. Knowl.), p. 119, seq.*)

TIMONACHUS, a painter of Byzantium, who flourished in the age of Cæsar the Dictator, and executed for him pictures of Ajax and Medea, which were placed in the temple of Venus Genetrix. For these paintings the artist received 80 talents. (*Plin.* 35, 11, 40. — *Id.*, 85, 4, 9.) The Medea is the subject of an epigram in the Anthology. (*Anthol. Palat., P. 2, p. 667.*) This epigram has been imitated by Anacrinus, in the 22d of his collection. For an account of other pieces of Timonachus, consult Sillig (*Diet. Art., s. v.*).

TIMON, I. a disciple of Pyrrho, who flourished in the time of Ptolemy Philadelphus, and lived to the age of 90 years. He first professed philosophy at Chalcedon, and afterward at Athens, where he remained till his death. He took little pains to invite disciples to his school, and seems to have treated the opinions and disputes of the philosophers with contempt; for he wrote a poem called Silli, in which he inveighs with bitter sarcasms against the whole body. He was addicted to intemperance. With him terminated the succession

of the public professors in the school of Pyrrho. The fragments of Timon were edited, in 1820, by Wölke, *Varese*, 8vo, and in 1821, by Paul, *Berol.*, 8vo.—II. Surnamed the *Misanthrope*, was a native of the borough of Colyttus in Attica, and remarkable for the whimsical severity of his temper, and his hatred of mankind. Born some time before the commencement of the Peloponnesian war, it is possible that the vices and crimes of which he was an eyewitness during this period of trouble may have contributed to the development of that morose spirit which procured for him the surname by which he is always known. It appears from the ancient writers, and indirectly from the testimony of Plato himself (*Phædon*, p. 67, *ed.* 1602), that this hatred towards his fellow-men was originally excited by the false and ungrateful conduct of others. He lavished upon those around him a large fortune in presents and in services of all kinds, and, when his wealth was all expended, he found that he had lost not only his property, but his friends. Misanthropy then succeeded to unbounded liberality; and, shunning the society of his fellow-men, and retiring to a small spot of ground in the suburbs, he gave himself up to the workings of an irritated and deeply disappointed spirit; or, if ever he did mix on any occasion with the busy world at Athens, it was only to applaud, with cruel irony, the errors and follies of his fellow-citizens. Cold and repulsive to all others, he appeared to take a lively interest in the young Alcibiades; but it was only because he saw in him the future author of evil to his country. He even publicly declared the motives that prompted him to this singular attachment; for, happening one day to meet Alcibiades returning from the place of assembly, accompanied by a large concourse, in place of turning away and avoiding him as he avoided others, he came directly up, and, grasping his hand, exclaimed, "Go on, my son; you do well to augment your own power, for you are only augmenting it to the lasting injury of these." One account says that Timon, having subsequently become possessed of a new fortune, probably by agriculture, changed to a complete miser, and shut himself up, together with his riches, in a kind of tower, which was called, for a long time afterward, the tower of Timon. This tradition is not, it is true, very consistent with the rank which Pliny (7, 19) assigns him among the "*auctores maxima sapientie*," nor with the apophthegm ascribed to him by Stobæus (*Serm.*, 7, p. 107), that "cupidity and avarice are the cause of all human ills;" but nothing ought to surprise us in so whimsical a character; and besides, if in the folly of avarice we see nothing of the sage, we certainly see enough of the misanthrope. The end of Timon was worthy of his life. Having broken a limb by a fall, and having, in his aversion for his fellow-men, refused all assistance, a gangrene set in and he died. But this was not all. Nature herself seems to have seconded the intentions of Timon, by separating him, even after death, from the habitable world; for his tomb having been erected near the seashore, the ground around it was gradually covered by the water, and the spot thus rendered inaccessible. The character of Timon is made a frequent subject for epigrams in the Greek Anthology, and many sayings of his are quoted by the ancient writers. The two following are the best: Timon, after having renounced the society of his fellow-men, still kept up a kind of intimacy with another misanthrope named Apimantus. During a repast in which they were celebrating the second day of the Anthesteria (*χῶρ*), Apimantus, charmed with the tête-à-tête, exclaimed, "Oh, Timon! what an agreeable supper!" "Ay," replied the other, "were you only away!" On another occasion, the people of Athens were surprised to see him ascend the tribune, and waited in profound silence to hear what he would say. "Athenians," exclaimed the new orator, "I have a

small field, and in this field a fig-tree, on which many citizens have already hung themselves. I intend now to build a house on this spot, and wish to give you notice before I begin, in order that if there be any more of you who intend to hang yourselves, you may come before the fig-tree is cut down." (*Diag. Laert.*, 9, 112.—*Suid.*, s. v.—*Leclerc*, in *Biogr. Univ.*, vol. 46, p. 83, *segg.*)

TIMOPHĀNES, a Corinthian, brother to Timoleon. He attempted to make himself tyrant of his country by means of the mercenary soldiers with whom he had fought against the Argives and Cleomenes. Timoleon wished to convince him of the impropriety of his measures; and, when he found him unmoved, he caused him to be assassinated. (*Vid.* Timoleon, at the commencement of the article.)

TIMOTHĒUS, I. a poet and musician of Miletus, born 446 B.C. He was received with hisses the first time he exhibited in public at Athens, and farther applications would have been totally abandoned, had not Euripides discovered his abilities, and encouraged him to follow a profession in which he afterward gained so much applause. According to Pausanias, he perfected the cithara, by the addition of four new strings to the seven which it had before. Suidas, however, states that it had nine before, and that Timotheus only added two. The truth appears to be this: the lyre of Terpander had seven strings; that of Phrynis, a musical opponent of Timotheus, nine strings; and that of Timotheus, eleven. Hence, no doubt, the remark of Suidas, that the last-mentioned individual added only two strings. As, however, the two strings added by Phrynis were ordered to be removed by a public decree, Pausanias might say, without impropriety, that Timotheus had added four strings. This innovation was not well received by the Lacedæmonians, and it was condemned by a decree, which has been preserved for us in Boëthius (*de Musica*, 1, 1, p. 1372, *ed. Basil.*, 1670), and which furnishes, also, a good specimen of Doric prose. (*Maittaire, Dialectic.*, p. 385, *ed. Starr.*) The decree concludes with ordering that the kings and the ephori do publicly reprimand Timotheus, and compel him to cut off the newly-added strings of his lyre, and come back to the old number of seven. Athenæus relates, that when this decree was on the point of being carried into execution, Timotheus showed the Lacedæmonians that they had in their own city a small image of Apollo holding a lyre which had exactly the same number of strings as his own, and that, upon this, he was acquitted. (*Athenæus*, 14, p. 636, *c. f.*) His new system of music met with numerous adversaries throughout Greece; and Plutarch and Athenæus have preserved many of the sarcasms that were launched at him in consequence by the comic poets of the day. All these attacks, however, only served to confirm the reputation of the musician. After having distinguished himself in most of the Grecian cities, Timotheus retired to Macedonia, to the court of King Archelaus, where he died at a very advanced age, two years before the birth of Alexander the Great. Timotheus composed pieces in almost every department of poetry. A hymn in honour of Diana obtained for him a very large sum of money from the Ephesians, for whom he had composed it. The ancients cite his *Nomes*, his *Proems* or preludes, eighteen *Dithyrambics*, twenty-one *Hymns*, two *Poems*, entitled *Danaë* and *Semele*; four *Tragedies*, &c. We have merely a few fragments of his productions remaining. They are given by Grotius, in his *Excerptis ex tragædiis et comædiis Græcis*, &c., Paris, 1626, 4to. (*Recherches sur la Vie de Timothée*, par Barthelemy.—*Mém. de l'Acad. des Inscri.*, vol. 10.—*Weiss, Biogr. Univ.*, vol. 46, p. 92, *segg.*)—II. A celebrated musician, a native of Thebes in Boeotia. He was one of those who were invited to attend at the celebration of the nuptials of Alexander the Great. He excelled

particularly in playing on the flute; and his performance is said to have animated the monarch in so powerful a degree, that he started up and seized his arms; an incident which Dryden has so beautifully introduced into English poetry. (*Burette, Recherches, &c.*—*Weiss, Biogr. Univ.*, vol. 46, p. 93.)—III. An Athenian commander, son of Conon, inherited the valour and abilities of his father. In 375 B.C. he gained a signal victory over the Lacedæmonian fleet off Corcyra, and made himself master of this island. Then directing his course towards Thrace, he took several important cities in this quarter, and afterward delivered Cyzicus from the foe. He subsequently shared the command of the fleet with Iphicrates. The latter, having wished to attack the enemy during a violent tempest, and not obtaining the consent of Timotheus to so hazardous a step, caused him to be brought to trial at Athens. Timotheus was condemned to pay a fine of 100 talents; but, being unable to raise so large a sum, he retired to Chalcis, where he ended his days. His disinterestedness equalled his courage and military talents. He never appropriated to himself any portion of the booty taken from the foe. On one occasion he paid into the public treasury 1200 talents. There existed a very close intimacy between Timotheus and Plato. (*Corn. Nep., in Vit. —Ælian, V. H.*, 2, 10.—*Æschin.*, vol. 1, p. 247, ed. Reiske.—*Cic., Off.*, 1, 32.—*Id., de Orat.*, 3, 34.)

TINOIS, the capital of Mauritania Tingitana, on the northwestern coast of Africa, and a short distance to the east of the Ampelusan promontory. It was fabled to have been built by the giant Antæus. Sertorius took it; and as the tomb of the founder was near the place, he caused it to be opened, and found in it a skeleton six cubits long. Some editions of Plutarch read *ἑξήκοντα* (60) instead of *ἑξ* (6); the latter, however, is decidedly the true reading. Plutarch copies here, according to Strabo, the fable of Gabinus respecting the stature of Antæus.—The modern name of the place is *Tangier*. (*Mela*, 1, 5.—*Id.*, 2, 6.—*Plin.*, 5, 1.)

TIRYNA, the pilot of the ship of the Argonauts, was son of Hagnius, or, according to some, of Phorbas. He died before the Argonauts reached Colchis, at the court of Lycus, in the Propontis, and Erginus was chosen in his place. (*Apollod.*, 1, 9.—*Hygin., fab.*, 14, 18.)

TIRESIAS, a celebrated prophet of Thebes, son of Eueres and the nymph Chariclo, of the race of Udeus, one of the Sparti. (*Vid. Sparti.*) Various accounts are given as to the cause of his blindness: one ascribes it to his having seen Minerva bathing (*Pherecyd., ap. Apollod.*, 3, 6, 7.—*Callim., Lav. Pall.*, 75, seqq.); another to his having divulged to mankind the secrets of the gods. (*Apollod., l. c.*) The Melampodidæ related that Tiresias, happening to see two serpents together on Mount Cithæron, killed the female, and was suddenly changed into a woman. In this state he continued for seven years; at the end of which period, observing two serpents similarly circumstanced, he killed the male, and thus returned to his pristine state. On some occasion, Jupiter and Juno fell into a dispute as to which derived more pleasure from the conjugal state, the male or female. Unable to settle it to their satisfaction, they agreed to refer the matter to Tiresias, who had known both states. His answer was, that of ten parts but one falls to man. Juno, incensed at this, deprived the guiltless arbitrator of the power of vision. Jupiter thereupon, as one god cannot undo the acts of another, gave him, in compensation, an extent of life for seven generations, and the power of foreseeing coming events.—Tiresias lived at Thebes, where he was contemporary with all the events of the times of Laius and Œdipus, and the two Theban wars. At the conclusion of the last he recommended the Thebans to aban-

don their city, and he was the companion of their flight. It was still night when they arrived at the fountain of Tilphussa. Tiresias, whose period of life was fated to be coextensive with that of the city of the Cadmeans, drank of its waters, and immediately died. The victorious Argives sent his daughter Manto, along with a portion of the spoil, to Delphi, according to the vow which they had made. In obedience to the command of the oracle, Manto afterward went thence, and, marrying Rhakios of Mycenæ or Cræte, founded the town and oracle of Clarus. She bore to Rhakios (or, as others said, to Apollo) a son named Mopsus, a celebrated prophet. (*Schol. ad Apollon. Rhod.*, 1, 308.—*Pausan.*, 7, 3.—*Tzetz. ad Lycophr.*, 980.)—The name Tiresias (*Τειρεσίας*) is apparently derived from *τήρας* (old form *τήρας*), a prodigy, and that of his daughter from *μάντις*. (*Keightley's Mythology*, p. 344, seq.)

TIRIDATES, a monarch of Parthia, raised to the throne after Phraates had been expelled for his cruelty and oppression. Tiridates, however, upon learning that Phraates was marching against him with a numerous army of Scythians, fled with the infant son of Phraates to Augustus. Augustus restored his son to Phraates, but refused to deliver up Tiridates. (*Vid. Parthia.*)

TIRO, M. Tullius, a freedman of Cicero's, held in high esteem by his master, and made eventually his private secretary and the superintendent of all his affairs. He performed many important services for Cicero, and received from the liberality of his grateful master a small rural domain, where he passed the rest of his days in retirement. Tiro wrote a Biography of Cicero, now lost; and made a collection of his bones mots (*joci*) in three books. This has shared the fate of his other work. He was the author, likewise, of several other works; and a passage in one of Cicero's letters (*Ep. ad Fam.*, 16, 18) gives us reason to suppose that he had attempted, among other things, even tragic composition. It is to the care of Tiro that we are indebted for the preservation of the letters of Cicero. To him, likewise, is attributed the invention of stenography or short-hand writing. This is hardly correct. He would merely seem to have reduced to a more perfect system an art which had existed long before. The poet Ennius was the first who used this manner of writing. Isidorus ascribes to him the invention of the art; in all likelihood, however, he merely borrowed it from the Greeks. (*Isid., Orig.*, 1, 21, 1.—*Weiss, in Biogr. Univ.*, vol. 46, p. 128, seq.)

TIRYNS or TIRYNTHUS, a city of Argolis, southeast of Argos, and about twelve stadia from Nauplia. It was celebrated for its massive walls, and is said to have been founded by King Proetus, brother of Acrisius, who, as Strabo reports, employed for the construction of his citadel workmen from Lycia. These are the Cyclopes, or Chirogasteres as they are sometimes called, who built the treasury at Athens, and the great doorway, which is still to be seen at Mycenæ. The poets have also ascribed to them the construction of the walls of Argos. (*Strab.*, 373.—*Apollod.*, 2, 2, 1. *Eustath. ad Il.*, 2, p. 286.)—Proetus was succeeded by Perseus, who transmitted Tiryns to his descendant Electryon. Alcmena, the daughter of this prince, was married to Amphitryon, on whom the crown would have devolved had he not been expelled by Sthenelus of Argos. His son Hercules, however, afterward regained possession of his inheritance, whence he derived the name of Tirynthus. (*Hes., Herc. Scut.*, 81.—*Apollod.*, 2, 4, 5.—*Pind., Ol.*, 10, 37.—*Id., Isthm.*, 6, 39.) This hero, after the murder of Iphitus, fled from Tiryns, and retired into the Trachinian country. Homer represents the city of Tiryns as subject to the kings of Argos at the time of the Trojan war. (*Il.*, 2, 559.) But it was afterward destroyed by the Ar-

gives, probably about the same time with the city of Mycenæ. Strabo reports that, on abandoning their homes, the Tirynthians retired to the neighbouring town of Epidaurus. (*Strab.*, 373.) But Pausanias affirms that the greater part were removed to Argos. The last-mentioned writer describes the remains of the walls of Tiryns as exhibiting a specimen of remarkably solid masonry. (Compare *Dodwell, Tour*, vol. 2, p. 250.—*Gell, Itin. of the Morea and Argolis*.)—Sir W. Gell (*Itin. of Argolis*, p. 169) corrects an error of D'Anville with regard to this place. "A mistake," he observes, "occurs on the subject of Tiryns, and a place named by him *Vathis*, but of which nothing can be understood. It is possible that *Vathi*, or the profound valley, may be a name sometimes used for the Valley of *Barbites*, and that the place named *Claustra* by D'Anville may be the outlet of that valley, called *Kleisour*, which has a corresponding signification."

TIRYATHIA, a name given to Alcmena, as being a native of Tiryns. (*Vid.* Tiryns.)

TIRAMENUS, a son of Orestes and Hermione the daughter of Menelaus, who succeeded on the throne of Argos and Lacedæmon. The Heraclids entered his kingdom in the third year of his reign, and he was obliged to retire with his family into Achæia. He was some time after killed in a battle against the Ionians near Hêlica. (*Apollod.*, 2, 7.—*Pausan.*, 3, 1.)

TIRIFRONE, one of the Furies. (*Vid.* Furie.)

TISAPHERNES, a satrap of Persia, commander of part of the forces of Artaxerxes at the battle of Cunaxa against Cyrus, and the one who first gave information to Artaxerxes of the designs of his brother. He afterward obtained a daughter of Artaxerxes in marriage, and all the provinces over which Cyrus had been governor. This was the same Tisaphernes who seized Alcibiades, and sent him prisoner to Sardis, after the naval victory which the latter had gained over the Lacedæmonians. Tisaphernes was afterward defeated by Agesilanus, upon which the King of Persia sent Tithraustes, another satrap, against him, who cut off his head. (*Plut.*, *Vit. Alcib.*—*Id.*, *Vit. Ages.*—*Xen.*, *Anab.*, 1, 2.)

TITAN or **TITANUS**, I. a son of Cœlus (or Uranus) and Vesta (or Terra), brother to Saturn and Hyperion. He was the eldest of the children of Cœlus; but he gave his brother Saturn the kingdom of the world, provided he raised no male children. When the births of Jupiter, Neptune, and Pluto were concealed from him, Titan, on discovering the deception, made war against Saturn, and imprisoned him till he was replaced on his throne by his son Jupiter. (*Lactantius, de Fals. Rel.*, 1, 14.) This legend differs, it will be perceived, from the ordinary one, as given under the article Titanes.—II. A name applied to the sun, as the offspring of Hyperion, one of the Titans. (*Tibull.*, 4, 1, 50.—*Virg.*, *Æn.*, 4, 118.)—III. An epithet sometimes applied to Prometheus by the poets. (*Soph.*, *Ed. Col.*, 56.—*Juvenal.*, 14, 34.—*Vid.* Prometheus.)

TITANES, a name given to the sons of Cœlus (or Uranus) and Terra. They were six males, Oceanus, Coeus, Crîos, Hyperion, Iapetus, and the youngest of them Cronus; and six females, Thetis, Rhea (or Rheia), Themis, Mnemosyne, Phœbe, and Tethys. These children, according to the commonly-received legend, were hated by their father, who, as soon as they were born, thrust them out of sight into a cavern of Earth, who, grieved at his unnatural conduct, produced the "substance of hoary steel," and, forming from it a sickle, roused her children, the Titans, to rebellion against him; but fear seized on them all except Saturn (Cronus), who, lying in wait with the sickle with which his mother had armed him, mutilated his unsuspecting sire. The drops which fell on the earth from the wound gave birth to the Erinyes, the Giants, and the Melian nymphs: from what fell into the sea sprung Aphrodite or Venus, the goddess of love and

beauty. When Saturn succeeded his father he married Rhea; but he devoured all his male children, as he had been informed by an oracle that he should be dethroned by them as a punishment for his cruelty to his father. The wars of the Titans against the gods are very celebrated in mythology. They are often confounded with that of the Giants; but it is to be observed that the war of the Titans was against Saturn, and that of the Giants against Jupiter.—Pezron (*Antiquité des Celtes*) indulges in some whimsical remarks on the subject, and makes the Celts to be the same with the Titans, and their princes the same with the Giants in Scripture. According to him, the Titans were the descendants of Gomer, the son of Japhet. He adds that the word *Titan* is perfect Celtic, and he derives it from *tit*, earth, and *den* or *ten*, man; and hence, he says, the reason of the Greek appellation of γῆγενεῖς, or earth-born, which was applied to them. The Titans, according to Bryant, were those Cushites, or sons of Chus, called Giants, who built the Tower of Babel, and were afterward dispersed.—Constant regards the legend of the gods and the Titans as the tradition of a warfare between two rival religious sects, the Titans being considered by him as having worshipped the elements and stars. (*Constant, de la Religion*, vol. 2, p. 315.)—The best solution, however, appears to be that which makes the Titans mere personifications of the elements, and their warfare with the gods an allegorical picture of the angry collisions of the elements in the earliest ages of the world. (Compare *Hermann and Creuser, Briefe*, p. 158.)

TITANIDES, the daughters of Cœlus and Terra. (*Vid.* Titanes, where their names are given.)

TITAREUS, a river of Thessaly, called also Eurotas, flowing into the Peneus a little above the vale of Tempe. The waters of the two rivers did not, however, mingle; as those of the Peneus were clear and limpid, while those of the Titareus were impregnated with a thick unctuous substance, which floated like oil upon the surface. (*Strabo*, 441.) Hence the fabulous account of its being a branch of the infernal Styx. (*Hom.*, *Il.*, 2, 751.—*Lucan.*, 6, 375.) It is now the *Saranta Poros*. (*Cramer's Anc. Greece*, vol. 1, p. 369.)

TITRONEUS, a son of Laomedon, king of Troy, by Strymo, the daughter of the Seamander. He was so beautiful that Aurora became enamoured of him and carried him away. She now besought Jove to bestow on him immortality. The sovereign of Olympus assented, and Tithonus became exempt from death; but the love-sick goddess, having forgotten to have youth joined in the gift, began, with time, to discern old age creeping over the visage and limbs of her beautiful consort. When she saw his hairs blanching, she abstained from his bed, but still kept him, and treated him with fond attention, in her palace on the eastern margin of the Ocean stream, "giving him ambrosial food and fair garments." But when he was no longer able to move his limbs, she deemed it the wisest course to shut him up in his chamber, whence his feeble voice was incessantly heard. (*Hom.*, *Hymn. in Ven.*, 218, seqq.) Later poets say that, out of compassion, she turned him into a cicada (τέττιξ). (*Schol. ad Il.*, 11, 1.—*Tzetx. ad Lycophr.*, 18.) Mezonon and Eræthion were the children whom Aurora bore to Tithonus. (*Keightley's Mythology*, p. 63.)

TITROEIA, a city on Mount Parmanus, called also Neon, for the name of Tithorea was only properly applied to one of the peaks of Parmanus. (*Herod.*, 3, 32.—*Strabo*, 439.) This place, as we learn from Herodotus, was taken and burned by the army of Xerxes (8, 33). In its vicinity, Philomelus, the Phœcian general, was defeated and slain by the Thebans. (*Pausan.*, 10, 8.)—Delphi and Tithorea, on different sides of the mountain, were the halting-places of those passing over Parmanus, at the distance of 80 stadia

from each other; being situate as the towns of *Aoste* in Piedmont, and *Martinsack* in the Vallais, are with regard to Mont St. Bernard. The whole district on the southern side was the Delphic; while all the country on the northern side received its name from Tithorea. The olives of this city were so highly esteemed that they were conveyed as presents to the Roman emperors; they still maintain their ancient reputation, being sent as an acceptable offering to the pashas and other grandees of Turkey. The ruins of Tithorea were first observed by Dr. Clarke, near the modern village of *Vilitza*. "We arrived," says that traveller, "at the walls of Tithorea, extending in a surprising manner up the prodigious precipice of Parnassus, which rises behind the village of *Vilitza*. These remains are visible to a considerable height upon the rocks." (*Travels*, vol. 7, p. 274.—Compare *Dodwell*, *Tour*, vol. 2, p. 139.—*Gell's Itin.*, p. 314.)

TITHEASTES, a Persian satrap, B.C. 395, ordered by Artaxerxes to put to death Tissaphernes. (*Vid.* *Tissaphernes*.)

TITIÄNUS, Julianus, a Latin geographical writer, who flourished about the commencement of the third century. Julius Capitolinus informs us that he was called "the ape of his time," from his possessing, in a high degree, the talent of imitation. From a passage in Sidonius Apollinaris (1, 1) we learn in what this imitation consisted. Titianus imitated the style of the writers of antiquity. Thus he took Cicero for his model in the letters which he published under the names of certain illustrious females. (*Schöll, Hist. Lit. Rom.*, vol. 3, p. 246.)

TITORMUS, a herdsman remarkable for his strength, in which he is said to have far surpassed even Milo. The latter having met him on one occasion, and having observed his great size of body, wished to make trial of his strength; but Titormus declined at first, saying that he was not possessed of much power of body. At length, however, descending into the river Evenus, he selected a stone of enormous size, and for three or four times in succession drew it towards him and then pushed it back again. After this he raised it up as high as his knees, and finally took it up on his shoulders and carried it for some distance; at last he flung it from him. Milo, on the other hand, could with difficulty even roll the same stone. Titormus gave a second proof of his vast strength by going to a herd of cattle, seizing a bull, the largest of the whole number, and fierce withal, by the foot, and holding it so firmly that it could not escape. Having then grasped another one, while in the act of passing, with the other hand, he held it in a similar manner. Milo, on seeing this, raised his hands to the heavens and exclaimed, "Oh, Jupiter! hast thou begotten in this man another Hercules for us?" Hence, says *Ælian*, came the common expression, "This is another Hercules." (*Ælian, Var. Hist.*, 23, 22.—*Herod.*, 6, 127.—*Lucian, de conscrib. Hist.*, p. 690.—*Eustath. ad Hom.*, *Od.*, 5, p. 206.)

TITUS FLAVIUS VESPASIANUS, son of Vespasian, succeeded his father on the imperial throne. Previous to his accession, his military talents had been proved by the successful issue to which he had brought the sanguinary and protracted war which was waged with the Jews, and which ended in the destruction of Jerusalem. At the close of the Jewish war he was received at Rome with the title of Cæsar, and admitted to the honour of a joint triumph with his father the emperor. He soon became the depositary of all power, and the source of the executive authority in all its branches; discharging the office of censor, which Vespasian had assumed, and even watching over the duties of prætorian prefect, never before administered but by a Roman knight. The only stain which was ever attached to the life of Titus belongs to this period of his history, before his accession to sovereign author-

ity, when his situation drew down upon him all the invidiousness of power, without supplying him with the means of securing popular affection. He is accused of having acted in some cases hastily and severely; and even of having gratified his personal resentment by condemning officers of rank to an ignominious death. He is, moreover, charged with avarice and bribery on the authority of Suetonius, who asserts, that those who had causes before the emperor knew how to obtain a favourable hearing, by placing a sum of money in the hands of the Cæsar. He had given offence, too, by an unwise attachment to Berenice, the sister of King Agrippa. (*Vid.* *Berenice VII.*) In a word, so seriously did the people regard these frailties in the character of their prince, that they anticipated in his reign a renewal of the flagitious, tyrannical, and sanguinary deeds which had condemned to infamy the name and government of Nero. But from the hour that Titus ascended the throne of his father, a total change took place in all that was previously vicious and objectionable in his character. He discarded all the ministers of his loose days, and, being resolved to reform the state of public morals, began by reforming himself. Although still strongly attached to the beautiful Berenice, he dismissed her to her own country, because he knew that such a connexion was disagreeable to the senate and people. He abolished also the law of treason, under the sanction of which so many acts of tyranny had been committed; and he not only discountenanced, but severely punished, all spies and informers. His whole time was now devoted to the duties of his high station, and his chief pleasure consisted in rendering services and kindnesses to his friends and to his people. His benevolence and goodness of heart would doubtless find ample scope; yet it is recorded of him, that one evening, recalling to mind the events of the day, and not finding that he had done anything during its course beneficial to mankind, he exclaimed in accents of regret, "*My friends, I have lost a day!*" This well-known exclamation, and the course of benevolent deeds by which it was accredited, procured for him the truly glorious title of the "*Delight of the Human Race*" (*Delicia humani generis*).—A fresh war which broke out in Britain was the occasion of drawing forth the extraordinary qualities of Cnæus Julius Agricola, who pushed his conquests far into the country; and from the circumstance of some soldiers, who had been worsted in a skirmish, taking to their bark, and being driven by the wind and tide to a Roman camp on a distant coast, he conceived the idea, and completed the discovery, that Britain was an island. But the public prosperity was clouded by a terrible convulsion of Nature—the eruption of Mount Vesuvius. After an interval of extreme heat and drought, the whole plain was shaken, as in an earthquake, with a sound of subterranean thunder, and a roaring agitation of the air and sea; at the same time, a torrent of smoke and flame, accompanied by showers of stones, bursting from the crater, darkened the sun like an eclipse. Suddenly a column of black ashes rose perpendicularly into the air, hovered like a cloud, and fell; and in its fall overwhelmed the towns of Herculaneum and Pompeii. This memorable event took place in A.D. 79, and serves to give a melancholy interest to the first year of Titus's sovereignty. The dark cloud of smoke and dust carried dismay even to the walls of the capital. The darkness which sank down upon the city terrified the inhabitants of Rome to such a degree, that many of them threw themselves, with their families, into ships bound for Africa and Egypt; imagining that Italy was about to atone for its sins by enduring the uttermost wrath of the gods. A pestilence soon after succeeded at Rome, of which it is said that not fewer than 10,000 persons died daily during a considerable period. This malady is ascribed by historians

ans to the pollution which was supposed to have infected the air in consequence of the eruption of the mountain; but it is more probable that it originated in the poverty and filth occasioned by the sudden increase made to the population of the capital, when the fugitives from the ruined towns and villages of Campania sought an asylum within its walls. Such misfortunes wounded deeply the compassionate heart of Titus. He felt, says Suetonius, not only like a prince, but as a father, for the sufferings of his people, and spared neither labour nor expense to relieve their distress. Hastening in person to Campania for the purpose of assisting the sufferers in that quarter, Titus was recalled to his capital by another frightful calamity. A fire broke out at Rome, which raged three days and nights with the greatest violence, destroying an immense number of buildings both public and private. Among the former were the Pantheon, the Octavian Library, and the Capitol, which last had been but recently rebuilt after the demolition which it had sustained at the hands of the infuriated Germans during the reign of Vitellius. No sooner had this afflicting event reached the ears of the emperor, than he made known his determination to indemnify, out of his own coffers, all the losses which had accrued either to the state or individuals. So unwilling, in fact, was he that any one besides himself should have a share in the honour of relieving the fortunes of Rome, that he is said to have refused the contributions which were offered by some of his royal allies, by other cities of the empire, and by certain of the richest among the nobility. Such was now the constitution of Roman society, that attention to the amusements of the lower class of citizens in time of peace had become no less essential to the tranquillity of the empire than military talents during the pressure of war. With this view Titus proceeded to finish the amphitheatre, of which his father had laid the foundation; adding to it baths and other comforts for the gratification of the populace. This was the famous Colosseum, or Flavian Amphitheatre, the remains of which, at the present day, still present so striking a feature among the antiquities of Rome. The dedication of this superb edifice was celebrated by games of the most magnificent character. The sports lasted a hundred days, during which invention was racked to discover new modes of pleasing the eye, and of stimulating the depraved fancy of the multitude. It was observed that, on the last day of the games, the emperor appeared greatly dejected, and even shed tears. Hoping that his nerves would be strengthened by the purer air of the country, he retired to the neighbourhood of Reate, whence his family originally sprang, and whither he was accompanied by his brother Domitian. A fever with which he was seized was unduly checked by the use of the bath, to which he had become much addicted; and it is added by Suetonius, that the symptoms of the disease were greatly aggravated by adopting a suggestion of Domitian's, that the patient should be put into a tub filled with snow. Thus died, on the 13th day of September, A.D. 81, Titus, in the same house where his father had expired, after a pacific reign of two years and nearly three months. The character of this prince has been given in the history of his actions; and his name, even at the present day, conveys to the reader all those ideas of justice, clemency, wisdom, and benevolence, which enter into the conception of a good sovereign; and his virtues were prized still more highly when contrasted with the violent and ungovernable temper of his brother, who succeeded him on the throne. (Sueton., *Vit. Tit.*—*Dio Cass.*, 66, 15, *seqq.*—*Encyclop. Metrop.*, div. 3, vol. 2, p. 607, *seqq.*)

TITYUS, a celebrated giant, son of Terra; or, according to others, of Jupiter, by Elara, the daughter of Orebomenas. Tityus happened to see Latona, on one occasion, as she was going to Delphi. Inflamed

with love, he attempted violence; but the goddess called her children to her aid, and he soon lay slain by their arrows. His punishment, however, did not end with life. He lay extended in Erebus, covering with his vast frame nine entire *jugera*, while a vulture kept feeding upon his liver and entrails, which were continually reproduced. (*Od.*, 11, 576, *seqq.*—*Apollod.*, 1, 4, 1.—*Virg.*, *Æn.*, 6, 595.—*Schol. ad Apollon. Rhod.*, 1, 761.) Heyne makes Tityus to have been an ancient hero, and supposes that part of the fable which relates to the nine acres to have been founded on the circumstance of his having had, after death, a tumulus of vast size covering his remains. (*Antiquarischer Aufsätze*, vol. 1, p. 56.)

TMOLOS, I. a broad and elevated mass of mountains in Lydia, which sends several tributary torrents into the Hermus on the one side, and into the Cayster on the other, and divides, in fact, the valleys through which those two rivers flow. It was said to derive its name from Timolus or Tmolus, a Lydian king, having been previously called Carmanorius. (*Auct. de Fluv. in Pactol.*) This mountain was much celebrated for its wine. (*Plin.*, 5, 29.—*Virg. Georg.*, 2, 97.—*Senec. Phœn.*, 602.) Hence the frequent reference to it in the *Bacchæ* of Euripides (v. 64, 55, &c.). It appears also to have abounded with shrubs and evergreens (*Callim. fragm.*, 93); nor was it less noted for its mineral productions. It yielded tin; and the Pactolus washed from its cavities a rich supply of golden ore. (*Strab.*, 610, 625.) Strabo reports, that on the top of Tmolus there was a watch-tower erected by the Persians; it was of white marble, and commanded an extensive view of the surrounding country. Tmolus is now called *Bous Dagh* by the Turks. (*Cramer's Asia Minor*, vol. 1, p. 441, *seqq.*—Compare *Arundell's Asia Minor*, vol. 1, p. 25, 34, 54.)—II. A city of Lydia, in the vicinity of Mount Tmolus. According to Tacitus, it was destroyed by an earthquake under Tiberius. (*Ann.*, 2, 47.—Compare *Niceph. Call.*, 1, 17.)

TOGATA, an epithet applied to Cisalpine Gaul, where the inhabitants wore the Roman toga, i. e., enjoyed the rights of Roman citizenship. The cities of Cisalpine Gaul obtained the privilege of Latin cities, and, consequently, the right of wearing the Roman toga, by a law of Pompeius Strabo, about A.U.C. 665. (*Ascon., Comm. in Pison.*, p. 490.—*Vid. Gallia Cisalpina.*)

TOLETUM, now Toledo, a town of Hispania Tarraconensis, on the river Tagus, and the capital of the Carpetani. According to Sylva and other Spanish historians, this city was founded by a considerable body of Jews, who, on their emancipation from captivity 540 years before the vulgar era, established themselves here, and called the place *Toledoth* or *Toledath*, that is, *mother of the people*. This is all a mere fable. Cæsar made this city a place of arms, and Augustus rendered it one of the seats of justice in Spain. Modern Toledo was formerly celebrated for the exquisite temper of its sword-blades, for which, according to some of the ancient writers, Toletum was also famous. (*Plin.*, 3, 4.—*Itin. Ant.*, 438, 446.—*Græc. Falisc.*, *Cyneg.*, 351.)

TOLISTOBON, one of the Celtic tribes in Galatia, in Asia Minor. They occupied that portion of the country which extended along the left bank of the Sangarius from its junction with the Thymbria to its source, and was separated from Bithynia by that river. The principal town of this tribe was Pessinus. (*Cramer's Asia Minor*, vol. 2, p. 85.)

TOLŌSA, now Toulouse, a town of Gallia Narbonensis, which became a Roman colony under Augustus. The situation of Tolosa was very favourable for trade, and under the Romans it became the centre of the traffic which was carried on between the Mediterranean and Atlantic coasts of this part of Gaul. Minerva

had a rich temple there, which Cæpio the consul plundered; and as he was never after fortunate, the words *cursus Tolosanum* became proverbial. Cæpio is said to have plundered 15,000 talents. This wealth seems to have belonged, for the most part, to private individuals, who had placed it in the temple for safe keeping. (*Mela*, 2, 5.—*Cic.*, *N. D.*, 2, 20.—*Cæs.*, *B. G.*, 3, 20.)

TOLUMNIUS. *Vid.* Lars Tolumnius.

TOMIÆUS, a mountain of Epirus, on the declivity or at the foot of which stood the celebrated Dodona. Callimachus (*Hymn. in Cer.*, 62) calls it Tmarus. Pliny (4, 1), on the authority of Theopompus, assigns it a hundred springs around its base. Cramer makes it the same with the modern Mount Chémouri. (Consult remarks under the article Dodona, page 451, col. 1, and also *Cramer's Anc. Greece*, vol. 1, p. 116, *seqq.*)

TOMOS or **TOMI**, a town situate on the western shores of the Euxine Sea, about 36 miles below the mouth of the Danube. The name was fabled by the Greek mythologists to have been derived from *τομος*, "a cutting" or "separation," because Medea had here, as they maintained, cut to pieces her brother Absyrtus, and strewed his remains along the road in order to stop her father's pursuit. (*Vid.* Ovidius, page 949, col. 2.) Tomi is still called *Tomesiar*, though sometimes otherwise styled *Baba*. It is celebrated as being the place where Ovid was banished by Augustus. (*Vid.* Ovidius, page 949, col. 1.)

TOMYRIS, a queen of the Massagete in the time of Cyrus the Great. The Persian monarch sent ambassadors to her, asking her hand in marriage; but the Scythian queen, well aware that the king was more anxious for the crown of the Massagete than the possession of her own person, interdicted his entrance into her territories. Cyrus thereupon marched openly against the Massagete, and began to construct a bridge over the river Araxes. While he was thus employed, Tomyris sent an ambassador, recommending him to desist from his enterprise; but adding that, if he still persisted in his design, the Scythian forces would retire for three days' march from the river, and would thus allow him an opportunity of crossing without the aid of a bridge: when once on the opposite side of the river, he could then try his strength with her subjects. Or, if he did not like this plan, he might withdraw his own army a similar distance from the river, and the Massagete would then cross over into the Persian territories, and contend with him there. Cyrus, by the advice of Croesus, accepted the former part of the offer, and, having crossed the Araxes, planned the following stratagem, suggested to him by Croesus. He advanced one day's march into the territories of the Massagete, and then, leaving his camp full of provisions and wine, and his worst troops in charge of it, he returned with his best to the banks of the Araxes. What he had foreseen took place. The Massagete came with the third part of their entire force, under the command of Spargapises, the son of Tomyris, attacked the Persian camp, cut to pieces the troops stationed there, and then banqueted on the abundant stores which they found in the camp, and drank to excess of the wine. Cyrus, returning on a sudden, surprised the whole number, slew many, and took a much larger number prisoners; among the latter, the son of Tomyris himself. This prince, on recovering from the intoxication into which he had fallen, slew himself through a feeling of shame; and Tomyris, soon after, assembling all her forces, engaged in battle with Cyrus, whom she totally defeated. The Persian monarch himself was numbered among the slain; and the queen, having searched for and found his dead body, cut off the head, and plunged it into a skin-bag full of human blood, exclaiming at the same time, "I will give thee thy fill of blood" (*ὅς αἷματός σέβω*).

(*Herod.*, 1, 205.—Consult remarks under the article Cyrus.)

TORIOS, an island on the western side of the Sinus Arabicus, in what was called the Sinus Immundus, and not far to the south of Berenice. It was called also Ophiodes, from its containing many serpents. Ptolemy gives it the name of Agathonis Insula. The stone *topasus* was found here, whence the appellation given to the island. (*Agatharch.* in *Huds. Geogr. Mix.*, 1, 54.—*Diod. Sic.*, 3, 40.—*Plin.*, 37, 8.)—The topaz of the Romans was the modern chrysolite, a stone which has always an admixture of green with the yellow. This probably proceeds from particles of copper dissolved in an acid, and taken up with those of the lead into the matter of the gem at the time of its original concretion. (*Hill's Theophrastus*, p. 73.)

TORONÆ, I. a haven of Epirus, below the river Thyamis, and opposite Coreyra. It appears to have been in the vicinity of the modern Parga. Ptolemy gives Torone as the form of the name (p. 85), but Ptolemy calls it Torone (Τορόνη). This last writer reports that the fleet of Augustus was moored here for a short time previous to the battle of Actium. (*Vid. Anton.*)—II. A town of Macedonia, situate towards the southern extremity of the Sithonian peninsula, and giving name to the Sinus Toronæus, or Gulf of Cassandria. The harbour of Torone was called Cophos (Κωφός, *mute, silent*), from the circumstance that the noise of the waves was never heard there; hence the proverb *κωφόρεος τῷ Τοποναιῶσι Αἰγύρος*. (*Prov. Græc. Schott.*, p. 101.—*Strabo*, 330.—*Cramer's Anc. Greece*, vol. 1, p. 256.)

TORQUATUS. *Vid.* Manlius II.

TRABEA, Q., a Roman comic poet, who flourished about A.U.C. 622, or 132 B.C. (*Gronov. ad Aul. Gell.*, 15, 24.) Some of his verses are cited by Cicero. (*Tusc. Quæst.*, 4, 31.—*Id.*, *de Fin.*, 2, 4.) As regards the amusing deception played off on Joseph Scaliger by Marcius with some pretended lines of Trabea, consult *Fabricius (Bibl. Lat.*, 4, 1, 3.—*Bayle, Dict.*, vol. 4, p. 392.—*Schöll, Hist. Lit. Rom.*, vol. 1, p. 139.)

TRACHIA, or **TRACHIN**, a town of Thessaly, in the Melian district, and near the shore of the Sinus Maliacus. It was to this place that Hercules retired after having committed an involuntary murder, as we learn from Sophocles, who has made it the scene of one of his deepest tragedies. (*Trach.*, 39.) Trachia, so called, according to Herodotus, from the mountainous character of the country, forms the approach to Thermopylae on the side of Thessaly. (*Herod.*, 7, 176.) Thucydides states, that in the sixth year of the Peloponnesian war, B.C. 426, the Lacedæmonians, at the request of the Trachinians, who were harassed by the mountaineers of Cæta, sent a colony into their country. These, jointly with the Trachinians, built a town, to which the name of Heraclea was given (*Thucyd.*, 3, 92), distant about sixty stadia from Thermopylae, and twenty from the sea. Its distance from Trachia was only six stadia. (*Vid.* *Hercules VI.*)—II. A town of Phœcia, east of Panopeus, and close to the Boeotian frontier. It was surnamed Phœcia, for distinction's sake from the city of Thessaly. Pausanias, who calls it Thracia (Θρακίς), speaks of it as having been destroyed in the Sacred war. (*Pausan.*, 10, 2.—*Cramer's Ancient Greece*, vol. 2, p. 182.)

TRACHONITIS, a part of Judæa, on the other side of the Jordan, on the northern confines of Palestine. Its name is derived from the Greek *τραχύς*, *rough*, and has reference to its being a rugged and stony country. (*Plin.*, 5, 18.—*Josephus, Ant.*, 15, 13.)

TRAJANOPOLIS, I. a city of Cilicia, the same as Selinus. (*Vid.* *Selinus*).—II. A city of Thrace, on the Hebrus, below its confluence with the Zerna. It became the capital of the Roman province of Rhodope, and, according to Reichard, is now *Arichoro*. (*Ptol.*

—*Ein. Ant.*, 323.—*Ein. Hierocl.*, 602.—*Hierocl.*, 631.)

TRAJANUS, M. ULPIUS CRINUS, a Roman emperor, the successor of Nerva. The latter, towards the close of his short reign, feeling his inability to control the seditious troops of the capital, resolved to adopt Trajan as his colleague and successor in the empire, by whose firmness and decision the pretorian bands might be kept in awe. The result proved the wisdom of his choice. So high was the character of Trajan, that no person could be named equally worthy of the empire; and even the seditious soldiery of the pretorian camp submitted without a murmur. The selection of Trajan prevented any contests for imperial power at the death of Nerva; so that the new emperor entered without the necessity of bloodshed upon the discharge of his high functions. He was by birth a Spaniard, having been born at Italica, but he was of Italian extraction, and had been early inured to the discipline of the army under his father, a commander of considerable reputation. When he himself became a general, he continued to practise the simple habits of a soldier, excelling his troops, not in personal indulgences, but in courage and virtue. On the throne he continued to exhibit the same excellences, only enhanced by the acquisition of a wider scope for their full development. Being superior to fear, it was natural that he should also be above harbouring suspicion. He therefore abolished the law of treason (*judicia majestatis*), which had been re-established by Domitian after having been abrogated by Titus, and prepared to restore as much of the free Roman constitution as was compatible with the existence of a monarchy. He restored the elective power to the *comitia*, complete liberty of speech to the senate, and to the magistrates their former authority; and yet he ruled the empire with unrivalled firmness, holding the reins of power with a strong and steady hand. Of him it has been said, not in the language of panegyric, but of simple sincerity, that he was equally great as a ruler, a general, and a man: and only such a man could with safety, as emperor, have used those remarkable words, when, giving a sword to the prefect of the pretorian guards, he said, "Take this sword, and use it; if I have merit, for me; if otherwise, against me."—Soon after the accession of Trajan, the Dacian monarch, Decebalus, sent to demand the tribute with which Domitian had purchased a disgraceful peace. This Trajan indignantly refused; and, levying an army, marched against the Dacians; who had already resumed their predatory incursions. The hostile armies soon came to an engagement, for both were equally eager; and, after a desperate struggle, the Dacians were routed with dreadful carnage. But so great was the loss of the Romans that for some time they were unable to follow up their victory. It was, however, decisive; and the Dacians were compelled, not only to forego their demands, but even to become tributaries to Rome. But, unaccustomed to servitude, and led by their gallant King Decebalus, they mustered fresh forces as soon as they had somewhat recovered from their overthrow, and prepared for another contest. The warlike emperor was equally ready for the shock of arms. Not satisfied with expelling the invaders, he now determined to carry the war into the country of the enemy. For this purpose he erected a stupendous bridge over the Danube, with a strong fortification at each end, defeated the Dacians in every battle, marched into the heart of their country, and made himself master of their chief town. Decebalus, despairing of success, killed himself, and Dacia was restored to a Roman province, and secured in subjection by colonies and standing camps. On his return from the Dacian war, Trajan gratified the people by rejoicings celebrated on the most magnificent scale; for, according to Dio Cassius, the different shows that were exhibited lasted for four months, in

the course of which no fewer than 10,000 gladiators are said to have fought for the amusement of the multitude. It was in commemoration, also, of the conquest of Dacia, that the famous pillar in the forum of Trajan was erected, although it was not completed till the seventeenth year of his reign.—The deepest stain which rests on the memory of Trajan is the sanction which he gave to the persecutions of the Christians. This persecution raged chiefly in the Asiatic provinces, where Christianity was most prevalent; and when Pliny the younger, at that time proconsul of Bithynia, wrote to Trajan for instructions respecting a matter which was causing the death of so many men, who could not be convicted of any public crimes, the emperor returned an ambiguous answer, the purport of which was, "that the Christians should not be sought for, nor indicted on anonymous information, but that, on conviction, they ought to be punished." Such an answer was contrary to every principle of justice; for, if criminal, they ought to have been sent for; if not criminal, they ought not to have been punished. The persecution, being somewhat discouraged, was gradually suffered to abate.—Trajan's passion for military fame had been but excited, not satiated, by his Dacian conquests. He next directed his attention to the East, and resolved to wrest from the Parthians, the most formidable foes of Rome, the empire of Central Asia. The first scene of his glory was Armenia, which he speedily reduced to a Roman province. Hence he advanced into Mesopotamia, throwing across the rapid Tigris a bridge not less remarkable than that which spanned the Danube. The greater part of what had been the Assyrian empire was overrun by his victorious arms. Seleucia yielded to his might; Ctesiphon, the capital of the Parthian kingdom, could not resist his prowess; all opposition appeared fruitless, and victory seemed the companion of his march. Elated with these successes, and emulating the glory of Alexander while he traversed the countries which had been the scene of his exploits, he descended the Tigris to behold the Persian Gulf; and it is said, that, seeing a vessel there ready to sail for India, he exclaimed, that if he were a younger man, he would carry his arms against the inhabitants of India. While he had been dreaming of the invasion of India, his conquests of the preceding year were vanishing from his grasp. As soon as the immediate terror of his army was withdrawn, the countries which he had overrun began to shake off the yoke, and the emperor enjoyed the empty glory of giving away the crown of Parthia to a prince whom Dio Cassius calls Parthamaspatēs, and whose reign was likely to last no longer than while the Romans were at hand to protect him. Not long after this, Maximus, a man of consular rank, on whom Trajan had bestowed the command of a separate army, was defeated and slain in Mesopotamia; and Trajan, at the end of the season, fell back with his forces into Syria, with the hope of renewing the invasion in the following spring. But he was seized with a lingering illness, which obliged him to resign all thoughts of taking the command in person; and he wished, therefore, to return himself to Rome, leaving the care of the army to Hadrian, who had married his niece. As Trajan had no children, his wife Plotina is said to have used all her influence to persuade him to adopt Hadrian; but it was generally believed that she never could prevail upon her husband to take this step, and that the instrument which she produced, and sent to Hadrian at Antioch immediately before the death of Trajan, was, in reality, a forgery of her own. Trajan died at Selinus, in Cilicia, in A.D. 117, after a reign of nineteen years and a little more than six months.—In addition to what has already been said of his character, we may remark that Trajan was an affectionate husband and brother. As a sover-

eign, his popularity during his lifetime was equalled by the regard entertained for his memory by posterity; and his claim to the title of *Optimus*, which the senate solemnly bestowed upon him, was fully confirmed by the voice of succeeding times; inasmuch as for two hundred years after his death, the senate, in pouring forth their prayers for the happiness of a new emperor, were accustomed to wish that he might surpass Augustus in prosperity and Trajan in goodness of character. (*Plin.*, *Paneg.*—*Aurel. Victor.*, *Vit. Traj.*—*Die Cass.*, 68, 4, *seqq.*—*Hatherington's History of Rome*, p. 195, *seqq.*—*Encyclop. Metropol.*, div. 3, vol. 3, p. 649, *seqq.*)

TRAJECTUS, I. RHEINI, now *Utrecht*.—II. MOSÆ, now *Maastricht*.

TRALLÆS, a town of Lydia, a short distance north of Magnesia ad Mæandrum. In Strabo's time it was one of the most flourishing cities of Asia Minor, and was noted for the opulence of its inhabitants. It was said to have been founded by some Argives, together with a body of Thracians, from whom it took the name of Tralles. (*Strab.*, 649.—*Herzsch.*, s. v. *Τράλλεις*.—*Diod. Sic.*, 17, 65.) It had previously borne those of Anthes or Enanthes, Erymna, Charax, &c. The shape of the town was that of a trapezium, and it was defended by a citadel and other forts. The river Eudon or Eudonus flowed near the walls. The citizens of Tralles, on account of their great wealth, were generally elected to the office of *asarchs*, or presidents of the games celebrated in the province. The country around Tralles was much subject to earthquakes.—Chandler mistook the ruins of Tralles for those of Magnesia, as M. Barbier du Bocage has well proved in his notes to the French translation of his work. They are situated above the modern *Ghiuzel-kissars*, in a position corresponding with Strabo's description. (*Cramer's Asia Minor*, vol. 1, p. 464, *seqq.*—Compare *Fellows' Asia Minor*, p. 276.)

TRAPÆZUS, a city on the northeastern coast of Pontus, founded by a colony from Sinope. Its ancient name was derived from the square form in which the city was laid out, resembling a table (*τράπεζα*). Trapezus is celebrated for the hospitable reception which its inhabitants gave to the ten thousand Greeks on their retreat, this being the first Greek colony which the latter had reached after the battle of Cunaxa. It fell subsequently into the hands of the Romans, and was embellished and improved by the Emperor Hadrian. It was taken from the Romans, however, by the Scythians or Tartars in the reign of Valerian. The Greek emperors became afterward masters of it. A separate dynasty was here established, commencing with Alexis Comnenes, in 1204, which ended with the capture of the city by Mohammed II. in 1462. The princes who reigned in this city are the Greek emperors of whom so much mention is made in romance and so little in history: they must not be confounded with the imperial line at Constantinople. Trapezus is now called *Trebisond*, or, as the Turks pronounce it, *Terebezoun*. (*Arrian, Periplus Pont. Eux.* in *Huds. G. M.*, 1, 17.—*Mela*, 1, 19.—*Plin.*, 6, 4.)—II. A city of Arcadia, in the southwestern angle of the country, and between the Achelous and Alpheus. The inhabitants of this place, in consequence of having refused to join in the colonization of Megalopolis, were forced to quit the Peloponnesus, and retire to the city of Trapezus, on the Euxine, where they were received as a kindred people. (*Pausan.*, 8, 27, *seqq.*)

TRASMENUS LACUS, a lake of Etruria, a few miles to the south of Cortona, on whose shores Hannibal gained his third victory over the forces of the Romans. It is now *Lago di Perugia*. (*Vid. Hannibal*.)

TREBA, a town of the Sabines, near the source of the Anio, now *Trevi*. (*Plin.*, 3, 12.—*Ptol.*, p. 65.) This place appears to have been, farther distinguished

by the name of Augusta; but after which emperor it was so called is uncertain. (*Front., de Aqued.*, 2.)

TREBATIUS TESTA, C., a distinguished lawyer in the time of Julius Cæsar and Augustus, and a man well known for his wit. Both Cæsar and Augustus held him in high estimation, and Cicero, on one occasion, eulogizes him highly when recommending him to the former of these, at that time proconsul in Gaul. The correspondence between Cicero and Trebatius himself occurs in the *Ep. ad Fam.*, 7, 8. Trebatius stood highly also as a poet. (*Schol. ad Horat., Sat.*, 2, 1, 4.—Compare the dissertation of Gundling: "*C. Trebatius Testa, Ictus, ab injuriis veterum et recentiorum liberatus*," *Hal. Sax.*, 1710, and *Menage, Amicit. Jur. Civ.*, c. 14.)

TREBELLIVS POLLIO, one of the "*Historie Auguste Scriptores*." He lived under Constantine the Great, and, according to Vopiscus (*Vit. Aurel.*), wrote the lives of the Roman emperors from Philip to Claudius II. We have remaining, however, at the present day, merely a fragment of the life of Valerian I., the lives of the two Gallieni, and of the so-called thirty tyrants. It was Trebellius who first made use of this expression "thirty tyrants," as applicable to a period when the empire was torn in pieces by competitors for the throne. Although the style of Trebellius Pollio is somewhat less vicious than that of the other writers of his time, still his cannot be ranked even among the ordinary class of historical writers.—The remains of Trebellius are given in the "*Historia Augusta Scriptores*." (*Schöll, Hist. Lat. Rom.*, vol. 3, p. 155.)

TREBIA, a river of Gallia Cisalpina, which ran from south to north, commencing in Liguria, south of the valley inhabited by the Friniates, and falling, after a course of about fifty miles, into the Po near Placentia. At the mouth of this river Hannibal obtained a victory over the Romans, and defeated them with the loss of 20,000 men. Both the consuls, Scipio and Sempronius, were present at the fight. This victory was preceded by that of the Ticinus, and followed by those of Trasymenus and Cannæ. The early defeat of the Roman cavalry at the Trebia occasioned the loss of the day. (*Polyb.*, 3, 66.—*Liv.*, 21, 48, *seqq.*)

TREBONIA LEX, *de Provinciis*, by L. Trebonius, the tribune, A.U.C. 698. It assigned provinces to the consuls for five years: Spain to Pompey; Syria and the Parthian war to Crassus; and prolonging for a time the command in Gaul, which had been bestowed on Cæsar by the Vatinian law. Cato, for opposing this law, was led to prison. According to Dio, however, he was only dragged from the assembly.

TRES TABERNÆ, a station on the Appian Way, about seven miles from Aricia, and where it was joined by a cross-road from Antium. It is mentioned by St. Paul in his journey to Rome (*Acts*, 28, 15), and likewise by Cicero when proceeding thither from Antium. (*Ep. ad Att.*, 2, 12.)

TREVERI, a nation of Gallia Belgica, between the Mosella or *Moselle*, and Silva Arduenna. Their chief city, Augusta Treverorum, called afterward, from its inhabitants, Treveri, now *Treves*, stands on the east bank of the Moselle. (*Cæs.*, *B. G.*, 5, 3.—*Id. ibid.*, 6, 2.—*Tac., Ann.*, 1, 41.—*Id. ibid.*, 3, 42.—*Id., Germ.*, 28.—*Mela*, 3, 2.)

TRIBALLI, a Thracian people, by far the most numerous and powerful tribe in that country. As they bordered on the Pæonians, and extended to the Danube, they were formidable neighbours on this the most accessible frontier of Macedonia. Alexander commenced his reign by an invasion of their territory, and, having defeated them in a general engagement, pursued them across the Danube, whither they had retreated, and compelled them to sue for peace. (*Thucyd.*, 2, 96.—*Strabo*, 318.)

TRISONCI, a German tribe on the left bank of the Rhine, and between that river and the Mediomatrici

and *Leuci*. Their chief city was *Argentoratum*, now *Strasbourg*. (*Tacit., Germ.*, 28.—*Cæs.*, B. G., 1, 51.—*Plin.*, 4, 17.)

TRIBONIANUS, a celebrated jurist, who was mainly instrumental in the compilation of Justinian, was a native of Pamphylia, and his father was from Macedonia. His learning was most extensive; he wrote upon a great variety of subjects, was well versed both in Latin and Greek literature, and had deeply studied the Roman civilians, of which he had a valuable collection in his library. He practised first at the bar of the prætorian prefects at Constantinople, became afterward *quæstor*, master of the imperial household, and consul, and possessed for about twenty years the favour and confidence of Justinian. His manners are said to have been remarkably mild and conciliating; he was a courtier, and fond of money, but in other respects he appears to have been calumniated by his enemies. His death took place A.D. 545. He was a superior man, and most valuable to Justinian.—This appears to be a proper place to give some account of Justinian's legislation. Soon after ascending the throne, this monarch gave orders (Feb., 528 A.D.) to a commission, consisting of Joannes and nine other persons, among whom were Tribonian or Tribonian and Theophilus, to make a general compilation of the best and most useful laws or constitutions which had been promulgated by the emperors his predecessors, beginning from Hadrian's perpetual edict down to his own time. Partial compilations had been made in the time of Constantine by private individuals, Gregory and Hermogenes, of which only fragments remain, and a more complete one was effected under Theodosius II. All these were now merged in the new Code of Justinian. A remarkable difference of style and manner is observable between the older constitutions issued before Constantine and those promulgated afterward. The former, being issued at Rome, and framed upon the decisions or "*responsa*" of learned jurists, are clear, sententious, and elegant; the latter, which were promulgated chiefly at Constantinople, in the decay of the Roman language, are verbose and rhetorical. Joannes and his nine associates completed their task in fourteen months, and the new Code, having received the imperial sanction, was published in April, A.D. 529. A few years after, Justinian, by the advice of Tribonian, ordered a revision of his Code to be made by Tribonian and four others. These commissioners suppressed several laws as either useless or inconsistent with present usage, and added many constitutions which the emperor had been promulgating in the mean time, as well as fifty decisions on intricate points of jurisprudence. The Code, thus revised, was published in December of the year 534, under the title of "*Codex Justinianus repetitæ prælectionis*," and thenceforth had the force of law. The Code is divided into twelve books; every book is subdivided into titles, and each title into laws. The learned Gothofredus, in his prolegomena attached to his edition of the Theodosian Code, observes that Tribonian and his associates have been guilty of several faults in the compilation of the Code; that the order observed in the succession of the titles is confused; that some of the laws have been mutilated and have been rendered obscure; that sometimes a law has been divided into two, and at other times two have been reduced into one; that laws have been attributed to emperors who were not the authors of them, or who had given quite contrary decisions; all which would be still more injurious to the study of the Roman law, if we had not the Theodosian Code, which is of great use towards rightly understanding many laws in the Code of Justinian. In the year following the publication of his Code, Justinian undertook a much greater and more important work: to extract the spirit of jurisprudence from the decisions and conjectures, the questions and disputa-

tions, of the Roman civilians. In the course of centuries, under the republic and the empire, many thousand volumes had accumulated, filled with the learned lucubrations of the juriconsults, but which no fortune could purchase and no capacity could digest. The juriconsults, ever since the time of Augustus, had been divided into opposite schools, and thus conflicting opinions were often produced, which only served to puzzle those who had to decide what was law. To put order into this chaos was the object of Justinian. In December, 530, he commissioned seventeen lawyers, with Tribonian at their head, with full authority to use their discretion as to the works of their predecessors, by making a choice of those whom they considered as the best authorities. They chose about forty out of Tribonian's library, most of them juriconsults who had lived during that period of the empire which has been sometimes called the age of the Antonines, from Hadrian to the death of Alexander Severus. From the works of these writers, said to have amounted to two thousand treatises, the commission appointed by Justinian was to extract and compress all that was suited to form a methodical, complete, and never-failing book of reference for the student of law and the magistrate. Justinian gave Tribonian and his associates ten years' time to perform their task; but they completed it in three years. The work was styled "*Digesta*," and also "*Pandectæ*" (*embracing all*), and was published in December, 533. It was declared by the emperor that it should have the force of law all over the empire, and should supersede all the text-books of the old jurists, which, in future, were to be of no authority. If the whole "*Digest*" is divided into three equal parts, the contributions of Ulpian are somewhat more than one third. The "*Digesta*" is divided into fifty books, each book being also divided into titles, and subdivided into sections. Of the merits and imperfections of the "*Digest*," Cujas, Hotomannus, Heineccius, Gravina, Schulting, Bynkershoek, and many others, have amply spoken. With all its faults, it is a noble work, and much superior to the Code in its style, matter, and arrangement; it has, in great measure, embodied the wisdom of the most learned men of the best age of the empire; men who grounded their opinions on the principles of reason and equity, and who, for the most part, were personally un concerned and disinterested in the subjects on which they gave their responses. Tribonian and his colleagues are charged with making many interpolations, with altering many passages in the writings of their predecessors, with substituting their own opinions, and passing them off to the world under the name of the ancient jurists. Justinian himself acknowledged that he was obliged to accommodate the old jurisprudence to the altered state of the times, and to "make the laws his own." Another charge, which is, however, unsupported by evidence or probability, is, that Justinian and his civilians purposely destroyed the old text-books that had served them for the compilation of the "*Pandectæ*." Long, however, before Justinian's time, the works of the ancient jurists were partly lost, and the vicissitudes of the ages that followed may easily have obliterated the rest. While the *Digest* was being compiled, Justinian commissioned Tribonian and two other civilians, Theophilus and Dorotheus, to make an abridgment of the first principles of the law, for the use of young students who should wish to apply themselves to that science. This new work, being completed, was published under the name of "*Institutiones*," about one month before the appearance of the *Digest*. The *Institutiones* were mainly based on an older work of the same description and title. They are arranged in four books, and subdivided into titles. As the law has three objects, persons, things, and actions, the first book treats of persons or status; the second and third, and first

five titles of the fourth, treat of things; and the remaining titles of the fourth book treat of actions. Besides these three compilations, the Code, the Institutes, and the Digest, Justinian, after the publication of the second edition of his Code, continued to issue new laws or constitutions, chiefly in Greek, upon particular occasions, which were collected and published together, after his death, under the name of *Nepoi Anaragis*, or *Novæ*, or *Constitutiones Novellæ*, or *Authenticæ*. The *Novellæ* are divided into nine Collationes and 168 Constitutions, or, as they are now often called, *Novels*. The *Novellæ*, together with the thirteen Edicts of Justinian, made up the fourth part of his legislation. There are four Latin translations of the *Novellæ*, two of which were made soon after Justinian's death; the third is by Halvander, printed at Nürnberg in 1531; and the fourth was printed at Basle, by Herravius, in 1561. This last translation is that which is printed in the editions of the *Corpus Juris* opposite to the Greek text, and is very valuable, notwithstanding it has been stigmatized by some with the name "barbarous;" it is sometimes called *Authentica Interpretatio*, or *Vulgata*. The version of Halvander is also printed in some editions of the *Corpus Juris*. The *Novellæ* made many changes in the law as established by Justinian's prior compilations, and are an evidence that the emperor was seized with a passion for legislating; a circumstance which enables us to form a more correct judgment of his real merits, and lowers his character as a philosophic jurist. Among the numerous editions of the *Corpus Juris Civilis*, the best is that of Gothofredus, *Col. Munat.*, 1758, 3 vols. folio. Pothier's edition of the *Digest*, reprinted at Paris, in 5 vols. 4to, 1818-1820, is a useful edition: there is a very cheap edition of the *Corpus Juris* recently published in Germany by Beck, 3 vols. small folio, *Leipzig*, 1829. (*Encycl. Us. Knowl.*, vol. 13, 163-5.—Ludewig, *Vit. Justin. Mag. et Theod.*, nec non *Trebon.*, Halle, 1731.—Zimmern, *Geschichte des Röm. Privatrechts bis Justinian*, Heidelb., 1826.—Hugo, *Lehrbuch der Gesch. des Röm. Rechts*, Berlin, 1832.—*History of the Roman or Civil Law*, by Ferrière, transl. by J. Beaver, London, 1724.—Hommelii, *Palingenesia*.—Brinkmannus, *Institutiones Juris Romani*, Schleiswig, 1822.—*System des Pandekten-Rechts*, by Thibaut, 7th ed., Jena, 1828.—*Das Corpus Juris in's Deutsche übersetzt von einem vereine Rechtsgelahrter und herausgegeben von Otto, Schilling, und Sintenis*, Leipzig, 1831.—*Les cinquantes livres du Digeste*, &c., traduits en Français par feu Henri Heslot, Paris, 1805.—*Pandectes de Justinien mises dans un nouvel ordre*, &c., par J. R. Pothier, traduites par Bréard Neuville, révisées et corrigées par M. Moreau de Montalin, Avocat, Paris, 1810.)

TRICOLA, a mountain fortress and town in Sicily, near the lower coast, east of Selinus, and north of the mouth of the Crimissus. It was also called *Triccala* and *Triocla*. This place came into notice during the Servile war in Sicily, as being the residence of the slave-king Tryphon. Facellus places its site near the modern *Calata Bellota*, but Reichard by *Colatrasi Castello*. (*Steph. Byz.*, s. v.—*Ptol.*—*Sil. Ital.*, 14, 271.)

TRICASSÆ, a people of Gaul, northeast of the Senones, and through whose territories flows the Sequana, or *Seine*, in the earlier part of its course. Their chief city was Augusta Bona, now *Troyes*. (*Ptol.*—*Amm. Marc.*, 15, 11.—*Id.*, 16, 2.)

TRIOCA, a city of Thessaly, southeast of Gomphi, and near the junction of the Peneus and Lethæus. It is mentioned as early as the time of Homer, and placed by him under the dominion of the sons of Æsculapius. (*Il.*, 2, 729; 4, 202.) Strabo informs us that Trioca possessed a temple of Æsculapius, which was held in great veneration. (*Strabo*, 437.) The modern *Tricala* appears to correspond to the site of the ancient

city. From the Byzantine historians we see that the name had already been corrupted in their time to the present form of *Tricala*. (*Procop.*, *Edif.*, 4, 3.—*Hierocl.*, p. 643.—*Cramer's Anc. Greece*, vol. 1, p. 357, *segg.*)

TRICORÆ, a Gallic tribe in Gallia Narbonensis, in the territory of Massilia and Aquæ Sextiæ. (*Livy*, 21, 31.—*Plin.*, 3, 4.—*Amm. Marc.*, 15, 10, *segg.*)

TRIDENTUM, now *Trent* (or, as the Italians write the name, *Trento*), a city of Rhetia, on the river Athasis or *Adige*, and a short distance from the northern confines of Venetia. It was built by the Cenomani, who were dispossessed by the Romans. (*Justin*, 20, 5.—*Itin. Ant.*—*Paul Warnefr.*, *de Gest. Long.*, 6, 36, &c.) Some authors affirm that the name *Tridentum* is derived from Neptune's sceptre or trident, to which god they say the city was once consecrated; this opinion took its rise from an ancient marble being found there, on which was Neptune holding a trident. Others derive the name from three rivers that fall into the Adige near the city; while others, again, ascribe the name to the circumstance of there being three high rocks in the neighbourhood which appear like three teeth (*tres dentes*). All these etymologies are false; the name is most probably one of Celtic origin.—*Trent* is famous in modern history for the council of ecclesiastics which sat there for the purpose of regulating the affairs of the church. It was assembled by Paul III. in 1545, and continued by twenty-five sessions till the year 1563, under Julius III. and Pius IV. It had been removed in 1547 to Bologna, in consequence of a false rumour of a pestilence in Trent, but was reassembled at the latter city in 1551.

TRIGABOLI, a town of Italy, in the territory of Venetia, where the Padusa, or southern arm of the Po, separates itself from the main stream. Its site is near that of the modern *Ferrara*. (*Polyb.*, 3, 16.)

TRINACRIA, one of the ancient names of Sicily, from its three promontories (*τρεις ακραι*).

TRINOBANTES, a people of Britain, in modern *Essex* and *Middlesex*. (*Tac.*, *Ann.*, 14, 31.—*Cæs.*, *B. G.*, 5, 20.)

TRIOPEAS or **TRIOPI**, a son of Neptune by Canace the daughter of Æolus. He was father of Erisichthon, who is called on that account *Triopieus*, and his daughter *Triopis*. (*Ovid. Met.*, 8, 754.—*Apollod.*, 1, 7, 4.—*Heyne*, *not. crit. ad Apollod.*, l. c.)

TRIOPIUM, a city of Caria, founded by Triopæas, son of Erisichthon, and situate near the promontory of Triopium, at the extremity of Doris. On the promontory, which took its name from the city, was a temple of Apollo, known under the name of the Triopæan temple. The Dorians here celebrated games in honour of Apollo; here also was held a general assembly of the Dorians in Asia, upon the model of that of Thermopyla. (*Vid.* Doris.)

TRIPHYLIA, the southern portion of Elis. It took its name, according to Strabo, from the union of three different tribes (*τρεις φυλαι*), the Epel, or original inhabitants, the Minyæ, who migrated thither, and the Elei. (*Strabo*, 337.) Some authors, however, deduce the appellation from Triphylus, an Arcadian prince. (*Polyb.*, 4, 77, 8.)

TRIPOLIS, i. now *Tarabulus*, a city of Syria, on the seacoast below Aradus. The Greek name of this place, *Tripolis*, denoting three cities (*τρεις πόλεις*), is explained by Scylax (p. 42.—*Compare Diad. Sic.*, 16, 41.—*Plin.*, 5, 20.—*Strabo*, 754.) He states that the cities of Tyrus, Sidon, and Aradus sent each a colony to this place, who at first inhabited three separate cities, but in process of time became united into one. Diodorus Siculus, however, gives a somewhat different account. According to him, the three cities above mentioned, which were the parent states of all the other Phœnician cities, wishing to establish some place of general assembly, sent each a colony thither,

and founded this city (16, 41). It had a good harbour and extensive commerce. (*I. Phocas*, c. 4.—*Wesseling*, *Itin.*, p. 149.)—The town was taken and destroyed in 1289 by the sultan of Egypt, but was afterward rebuilt, though at some distance from the ancient site. (*Abulfeda*, *Tab. Syr.*, p. 101.) At the present day the sand has so accumulated that the city is separated from the sea by a small triangular plain, half a league in breadth, at the point of which is the village where the vessels land their goods. The commerce of the place consists almost entirely of coarse silks.—II. A region of Africa, on the coast of the Mediterranean, between the two Syrtis. It received this name from its containing three principal cities; *Lep-tis Magna*, *Cea*, and *Sabratra*. The second of these is the modern city of *Tripoli*.—III. A city of Pontus, on the coast, at the mouth of the river *Tripolis*, and northeast of *Cerasus*, now *Triboli*. (*Mannert*, *Geogr.*, vol. 6, pt. 2, p. 384.)—IV. A city of Lydia, on the western bank of the *Mæander*, northwest of *Hierapolis*, and near the confluence of the *Mæander* and *Cleodrus*. *Ptolemy* and *Stephanus* ascribe it to *Caria*, *Pliny* and *Hierocles* to *Lydia*. *Mannert* considers it to have been a *Phrygian* city. (*Geogr.*, vol. 6, pt. 3, p. 137.)

TRIPTOLEMUS, son of *Celeus*, king of *Eleusis*, and the same with *Demophoon*. (*Vid.* *Ceres*, page 330, col. 1.) The vanity of the people of *Attica* made them pretend that corn was first known and agriculture first practised in their country. *Ceres*, according to them, taught *Triptolemus* agriculture, and rendered him serviceable to mankind by instructing him how to sow corn and make bread. She also, it was fabled, gave him her chariot, which was drawn by two dragons, and in this celestial vehicle he travelled over the whole earth, and distributed corn to all the inhabitants of the world. At his return to *Eleusis*, *Triptolemus* restored *Ceres* her chariot, and is said to have established festivals and mysteries in honour of that deity. He reigned for some time, and after death received divine honours.—There seems to be an allusion in the name *Triptolemus* (derived probably from *τρεῖς* and *πόλεμος*) to an improvement introduced in early agriculture by treble ploughing. (*Hygin.*, *fab.*, 147.—*Pausan.*, 2, 14; 8, 4.—*Justin.*, 2, 6.—*Apollod.*, 1, 5.—*Callim.*, *H. in Cer.*, 22.—*Ovid.*, *Met.*, 5, 648.)

TRIQUËTRA, a name given to Sicily by the Latins, from its triangular form.

TRISMEGISTUS, a celebrated Egyptian priest and philosopher, of whom some mention has been already made in a previous article. (*Vid.* *Mercurius Trismegistus*.) It remains but to give here a brief sketch of his works, or, rather, of the productions that have come down to us in his name.—1. The most celebrated of these is entitled "*Poemander*," *Ποιμάνδρης* (from *ποιμην*, "*pastor*"), and treating "of the nature of all things, and of the creation of the world." It is in the form of a dialogue. This work is also sometimes cited under the following title, "*Of the Divine Power and Wisdom*."—2. A second work is entitled "*Æsculapius*," *Æsculapius*. It is a dialogue between *Hermes* (*Mercurius*) *Trismegistus* and his disciple, and treats of God, man, and the universe. It bears also the name of *Δόγος τέλειος*, but it exists only in the shape of a Latin translation, which some critics ascribe to *Apuleius*.—3. The third work has the following title: "*Ἱατρομαθηματικὰ ἢ περὶ κατακλίσεως νοσούντων Προγνωστικὰ ἐκ τῆς μαθηματικῆς ἐπιστήμης, πρὸς Ἀμμωνὸν ἀγύπτιον*," "*Iatromathematica, or the Art of presaging the Issue of Maladies by means of Mathematics* (i. e., by the planets or astrology), a work addressed to *Ammon the Egyptian*." As *Julius Firmicus*, a great admirer of Egyptian astrology, and who speaks of *Hermes*, makes no mention of this work, the probability is that it did not exist in the year 840 B.C., the period when *Firmicus* wrote.—4.

A treatise "*De Revolutionibus Nativitatum*," which exists merely in a Latin translation. It is in two books, and treats of the mode of drawing horoscopes. Some phrases in this work would seem to indicate that it is translated rather from the Arabic than the Greek.—5. The *Aphorisms of Hermes or Mercurius*, also in a Latin version. The work consists of astrological sentences or propositions, translated from the Arabian about the time of *Manfred*, king of Sicily. It is sometimes cited under the title of *Centilogium*.

—6. *Κεραυίδες*, "*Cyranides*," a work, the title of which has given rise to much speculation. Some authors derive the term from the Arabic, and make it equivalent to the French expression *melanges*, while others pretend that it is Greek, and that it is used in astrology to denote the power of the stars (from *ἀστρος*). Be this as it may, the *Cyranides* of *Trismegistus* treat of the magic powers and medical virtues of precious stones, of plants, and of animals. The Greek text of this work exists in manuscript in some of the European libraries, but it is only known, thus far, to the public through the medium of a Latin translation.—Besides these astrological works, there are others connected with chemistry, or, more correctly speaking, alchemy, of which the following are the titles: 1. A chemical treatise on the secret of producing the philosopher's stone. This work is cited among adepts under the pompous appellation of "*the Seven Seals of Hermes Trismegistus*."—7. "*The Emerald Tablet*." Under this title the receipt of *Hermes* for making gold is known. According to the adepts, *Sara*, the wife of *Abraham*, found this emerald tablet in the tomb of *Hermes*, on Mount *Hebron*.—The two works of which we have just spoken exist only in Latin. A third, entitled *Φερικαὶ βαφαί*, "*Chemical Tinctures*," exists, it is said, in manuscript in some libraries.—We have also a treatise of *Hermes* on "*Precious Stones*."—*Stobæus* has also preserved fragments of the five following works of *Trismegistus*: 1. *Ἡπὸς υἱόν*, or *Ἡπὸς Τάτ*, or *Ἡπὸς Ἀσκληπίου*, "*To his son*," or "*To Tat*," or "*To Æsculapius*."—2. *Ἡπὸς Ἀμμωνὸν περὶ τῆς ὅλης Οἰκονομίας*, "*On the Economy of the Universe*," a work addressed to *Ammon*.—3. *Κόρη κόσμου*, "*The Virgin of the World*." *Isis* is thus named. The work is a dialogue between *Isis* and her son *Horus*, on the Origin of the World.—4. *Ἀφροδίτη*, "*Venus*," a work on Generation.—5. *Περὶ Εὐμαρτηνῆς*, a hexameter poem "*on Destiny*."—The latest edition of the *Poemander* is that of 1630, *Col. Agripp.*, 6 vols. fol.—The *Æsculapius* is found united to most editions of the *Poemander*.—The *Iatromathematica* are found in the astronomical collection of *Camerarius*, and were also published separately by *Hoeschel*, *Argent.*, 1697, 8vo.—The treatise *de Revolutionibus Nativitatum* was edited by *Wolf*, *Basil.*, 1559, fol.—The *Aphorisms* were printed at *Venice*, 1498, fol., with the *Tetrabiblon* of *Ptolemy*, and at *Ulm*, in 1651 and 1674, in 12mo.—The *Cyranides* were edited by *Rivinus* (*Bachmann*), *Lips.*, 1638, 8vo, and *Francos*, 1681, 12mo.—The *Chemical Treatise* was printed at *Leipsic*, 1610, in 8vo. It is found, also, in the 4th volume of the *Theatrum Chemicum*, *Argent.*, 1613, 8vo. (*Schöll*, *Hist. Lit. Gr.*, vol. 6, p. 118.)

ΤΡΙΤΑΙΑ, a city of *Achaia*, southwest of *Ægium*, and near the confines of *Elia*. It was said to have been founded by *Callidas*, who came from *Cuma* in Italy, or, according to other accounts, by *Menalippus*, son of *Mars* and *Tritæa*. It was made dependant on *Patras* by order of *Augustus*. Its remains are generally supposed to correspond with those observed by modern travellers at *Goumenitza*. These ruins, which are very extensive, are sometimes called *St. Andree*, from a church dedicated to that apostle in the immediate vicinity. (*Gell.*, *Itin. of the Morea*, p. 125.—*Cramer's Anc. Greece*, vol. 2, p. 75.)

TARTAGENIA, a surname of Pallas. (*Vid.* Minerva, page 849, col. 2.)

TARTARON, I. a sea-deity, the son, according to Hesiod, of Neptune and Amphitrite. (*Theog.*, 930.) Later poets made him his father's trumpeter. He was also multiplied, and we read of Tritons in the plural number. Like the Nereides, the Tritons were degraded to the fish-form. Pausanias tells us, that the women of Tanagra, in Boeotia, going into the sea to purify themselves for the orgies of Bacchus, were, while there, assailed by Triton; but, on praying to their god, he vanquished their persecutor. Others, he adds, said that Triton used to carry off the cattle which were driven down to the sea, and to seize all small vessels, till the Tanagrians placing bowls of wine on the shore, he drank of them, and, becoming intoxicated, threw himself down on the shore to sleep, where, as he lay, a Tanagrian cut off his head with an axe. He relates these legends to account for the statue of Triton at Tanagra being headless. He then subjoins: "I have seen another Triton among the curiosities of the Romans, but it is not so large as this of the Tanagrians. The form of the Tritons is this: the hair of their head resembles the parsley that grows in marshes, both in colour and in the perfect likeness of one hair to another: the rest of their body is rough, with small scales, and is of about the same hardness as the skin of a fish: they have fish-gills under their ears; their nostrils are those of a man, but their teeth are broader, and like those of a wild beast: their eyes seem to me azure, and their hands, fingers, and nails are of the form of the shells of shellfish; they have, instead of feet, fins under their breasts and belly, like those of the porpoise." (*Pausan.*, 9, 20, 21.—*Keightley's Mythology*, p. 245, seq.)—II. A river of Africa, rising in Mount Usaleton, and, after forming in its course the two lakes of Tritonis and Libya, discharging its waters into the Syrtis Minor, near Tacape. It is now the *Gabs*.

TRITONIS or **TRITON**, a lake and river of Africa, inland from the Syrtis Minor. Minerva is said to have been called *Tritonia* because she first revealed herself in the vicinity of this lake. (But consult remarks under the article Minerva, page 849, col. 2.) Near the *Tritonis Palus* was the *Libya Palus*. Modern travellers speak of a long and narrow lake in this quarter, divided in two by a ford; D'Anville considers these to be the Tritonis and Libya Palus. The modern name of the former is *Farawa*, and of the latter, *El-Loudeath*. (*Herod.*, 4, 178.—*Pausan.*, 9, 33.—*Virg.*, *Æn.*, 2, 171.—*Met.*, 1, 7.)—III. An appellation given to Minerva by the poets. (*Virg.*, *Æn.*, 2, 226.—*Ovid.*, *Met.*, 3, 127.)—III. An epithet sometimes given to the sacred olive at Athens. (*Stat.*, *Sylv.*, 2, 7, 28.)

TRIVIA, a surname given to Diana, because she presided over places where three roads met. (*Vid.* Diana, and Hecate.)

TRIVICUM, a place situated among the mountains that separate Samnium from Apulia. The little town of *Trivico*, which appears on a height above the course of the ancient Appian Way, indicates the site of this place. (*Horat.*, *Sat.*, 1, 5, 79.)

TRIUMVIRATUM IN SUBLA, an island in the small river Rhenus, one of the tributaries of the Po, where the triumvirs Antony, Lepidus, and Augustus, met to divide the Roman empire after the battle of Mutina. (*Dio Cass.*, 46, 55.)

TROJANS, the inhabitants of Troas.

TROAS, a district on the Ægean coast of Mysia, in Asia Minor, extending as far south as the promontory of Lectum, now *Cape Baba*, of which Troy was the capital. The kingdom of Priam, if we form our ideas of it from the poems of Homer, must have been of very limited extent. Strabo, indeed, through partiality for his favourite poet, seeks to enlarge the limits of

Priam's kingdom, and makes it to have comprised the country on the coast of the Propontis as far as the river Æsepus, near Cyzicus. Homer, however, names many expressly as *allies* of the Trojans whom Strabo would wish to consider as the *subjects* of Priam. The northern part of Troas was termed Dardania, from Dardanus, a city founded by Dardanus, one of the ancestors of Priam. The Trojans were very probably of Thracian origin. (*Vid.* Troja.)

TROCM, a people of Galatia, on the side of Cappadocia, and between the Helys and the last-mentioned country. (*Polyb.*, 31, 13.—*Liv.*, 38, 16.—*Plin.*, 5, 32.)

TROEZÆNA, a city of Argolis, situate on the Sinus Saronicus, near the southeastern extremity of that country, and northeast of Hermione. The Troezenians prided themselves upon the great antiquity of their city, which had borne the several names of Œrea, Althepia, and Posidonis, before it received that of Troezen from Troezen, the son of Pelops, one of the earliest sovereigns of the country. He was succeeded by Pittheus, whose daughter, marrying Ægeus, became the mother of Theseus. This hero was born at Troezen, where he long resided. Many of his adventures, as well as those of Phædra and Hippolytus, are referred to this city by the tragic poets. The Troezenians could also boast of having colonized Myndus and Halicarnassus in Caria, and likewise the borough of Sphectus and Anaphlystus in Attica. (*Herod.*, 7, 99.—*Pausan.*, 2, 30.) On the arrival of the Heraclides and Dorians, Troezen was occupied by their forces, and became a republic independent of Argos, to which it had been subject at the time of the Trojan expedition. (*Pausan.*, l. c.—*Herod.*, 8, 43.) In the Persian war, the Troezenians received most of the Athenian families who were forced to abandon their city. (*Herod.*, 8, 41.) They sent five ships to Artemisium and Salamis, and 1000 heavy-armed soldiers to Plataea (*Herod.*, 8, 1.—*Id.*, 9, 28); they are also named among the confederates who fought at Mycale. (*Herod.*, 9, 102.)—The harbour of Troezen obtained the name of Pogon from its shape, being bounded by a curved strip of land which resembled a beard (*πώγων*). The ruins of this ancient city are to be seen near the village of *Damala*, in a plain situate at the foot of a lofty range of mountains, which runs from the Saronic Gulf to that of Hermione. (*Cramer's Anc. Greece*, vol. 3, p. 262, seqq.) "This place," observes Sir Wm. Gell, in speaking of Troezen, "now represented by a mean village of only forty-five habitations, was anciently of considerable extent, the longest side of the city having been at least one mile in length. It was probably, like most of the Grecian cities, of a form approaching to a triangle, having a wall on the plain, from the extremities of which other fortifications ran up the mountain to the Acropolis, on a craggy and detached summit, now very prettily spotted with wild olives." (Compare *Leake's Morca*, vol. 2, p. 442, seqq.)

TROGILIA, three small islands near Samos, named Pailon, Argennon, and Sandalion. (*Plin.*, 5, 31.) Strabo names only one, which he calls Trogilium, probably the same alluded to in the Acts of the Apostles (20, 15).

TROGILIUM PROMONTORIUM, a bold promontory of Ionia, nearly opposite to Cape Posidium, in the island of Samos, and separated from it by a strait not more than seven stadia wide. (*Strab.*, 636.) The Trogilian promontory is mentioned in the Acts, in the account of St. Paul's voyage from Troas to Miletus, by Mytilene, Chios, and Samos. From the latter island they crossed over to Trogilium, and after remaining there, it appears, one night, they reached Miletus the following day. (*Acts*, 20, 15.) The modern name of this promontory is *Cape Santa Maria*. (*Cramer's Asia Minor*, vol. 1, p. 378.)

tion of the Greek forces in the *Iliad*, than on the other parts of the poem which have a more poetical aspect, especially as it appears to be a compilation adapted to a later state of things. That the numbers of the armament are, as Thucydides observed, exaggerated by the poet, may easily be believed; and perhaps we may very well dispense with the historian's supposition, that a detachment was employed in the cultivation of the Thracian Chersonese. "My father," says the son of Hercules, in the *Iliad*, "came hither with no more than six ships and a few men: yet he laid Ilium waste, and made her streets desolate." A surprising contrast, indeed, to the efforts and success of Agamemnon, who, with his 1200 ships and 100,000 men, headed by the flower of the Grecian chivalry, lay ten years before the town, often ready to abandon the enterprise in despair, and who, at last, was indebted for victory to an unexpected favourable turn of affairs. It has been conjectured, that, after the first calamity, the city was more strongly fortified, and rose rapidly in power during the reign of Priam; but this supposition can hardly reconcile the imagination to the transition from the six ships of Hercules to the vast host of Agamemnon. On the other hand, there is no difficulty in believing that, whatever may have been the motives of the expedition, the spirit of adventure may have drawn warriors together from most parts of Greece, among whom the southern and northern Achæans, under Pelopid and Æacid princes, took the lead, and that it may thus have deserved the character, which is uniformly ascribed to it, of a national enterprise. The presence of several distinguished chiefs, each attended by a small band, would be sufficient both to explain the celebrity of the achievement and to account for the event. If it were not trespassing too far on the domain of poetry, one might imagine that the plan of the Greeks was the same which we find frequently adopted in later times, by invaders whose force was comparatively weak: that they fortified themselves in a post, from which they continued to annoy and distress the enemy till stratagem or treachery gave them possession of the town.—Though there can be no doubt that the expedition accomplished its immediate object, it seems to be also clear that a Trojan state survived for a time the fall of Ilium; for an historian of great antiquity on this subject, both from his age and his country, Xanthus the Lydian, related that such a state was finally destroyed by the invasion of the Phrygians, a Thracian tribe, which crossed over from Europe to Asia after the Trojan war. (*Strab.*, 572, 680.) And this is indirectly confirmed by the testimony of Homer, who introduces Neptune predicting that the posterity of Æneas should long continue to reign over the Trojans after the race of Priam should be extinct. To the conquerors the war is represented as no less disastrous in its remote consequences than it was glorious in its immediate issue. The returns of the heroes formed a distinct circle of epic poetry, of which the *Odyssey* included only a small part, and they were generally full of tragical adventures. This calamitous result of a successful enterprise seems to have been an essential feature in the legend of Troy; for Hercules also, on his return, was persecuted by the wrath of Juno, and driven out of his course by a furious tempest. If, as many traces indicate, the legend of Troy grew up and spread among the Asiatic Greeks, when newly settled in the land where their forefathers, the heroes of a better generation, had won so many glorious fields, it would not be difficult to conceive how it might take this melancholy turn. The siege of Troy was the last event to which the emigrants could look back with joy and pride. But it was a bright spot, seen through a long vista, checkered with manifold vicissitudes, laborious struggles, and fatal revolutions. They had come as exiles and outcasts to the shores which their ances-

tors had left as conquerors: it seemed as if the jealousy of the gods had been roused by the greatest achievement of the Achæans to afflict and humble them. The changes and sufferings of several generations were naturally crowded into a short period following the event which was viewed as their cause, and were represented in the adverse fortune of the principal chiefs of the nation. (*Thirlwall's History of Greece*, vol. 1, p. 154, seqq.)

5. Topography of Ancient Troy.

The topography of Troy, which will always be interesting to the classical reader, has been so much discussed and minutely inquired into by modern travellers and antiquaries, that no additional light can be expected to be derived from subsequent researches. A brief summary of what has been collected from the different authors who have expressly written on the subject will be here presented to the reader, referring the student, who is desirous of investigating it more deeply, to the list of works at the end of this article. This, the most classical of all lands, has been so completely trodden and examined, that it may be truly said that the ancient writers who wrote on the subject were much less acquainted with the actual topography of the Trojan plain than our best-informed modern travellers. The researches of these intelligent men have not only confirmed the great historical facts connected with the fate of Troy, which few persons, indeed, either in ancient or modern times, have ventured to question, and those evidently for the purpose of maintaining a paradox; but they have served beautifully to illustrate the noblest poem of antiquity, and to bear witness, with due allowance for poetical exaggeration, to the truth and accuracy of Homer's local descriptions. They have proved, that as in every other point he was the most close and happy delineator of nature, so here he has still copied her most faithfully, and has taken his description from scenes actually existing, and which must have been familiar to his eyes. In order that this may be proved to the reader's satisfaction, as far as it is possible, without an actual inspection of the country, we purpose first to lay before him all the general and most striking features in the Homeric chorography, and then to illustrate them by a continued reference to modern travellers and antiquaries. It will be seen, then, from the *Iliad*, that the Greeks, having arrived on the coast of the Hellespont, and effected a landing, drew up their vessels in several rows on the shore of a small bay confined between two promontories. (*Il.*, 14, 30.) Elsewhere he states that Achilles was posted at one extremity of the line, and Ajax at the other. (*Il.*, 8, 224; 11, 7.) He nowhere names the two promontories which enclosed the bay and the armament of the Greeks; but all writers, both ancient and modern, agree in the supposition that these are the capes Rhœteum and Sigeum, between which tradition attached to different spots the names of Neostathmus, the port of the Greeks, and the camp of the Greeks. (*Strabo*, 585.) According to Ptolemy, the distance from headland to headland was thirty stadia (5, 32). Strabo reckoned sixty stadia from Rhœteum to Sigeum, and the tomb of Achilles close to the latter (*l.c.*); and these distances agree sufficiently well with actual measurements. (*French Strabo*, 4, 170, in *not.*) Considerable changes, however, have taken place during the lapse of so many ages in the appearance of the coast. The promontories remain, but the bay has been completely filled up by the deposits of rivers and the accumulation of sand and soil, and the shore now presents scarcely any indenture between the headlands; but we are assured by Choiseul Gouffier, and others who have explored the ground, that there is satisfactory proof of the sea having advanced formerly some way into the land in this direction. (*Voy. Pittoresque*, 2, 216.—*Leake's Asia Mi-*

nor, p. 273.) The next great feature to be examined in the Homeric chorography is the poet's account of the rivers which flowed in the vicinity of Troy, and discharged their waters into the Hellespont. These are the Xanthus or Scamander, and the Simois, whose junction is especially alluded to. (*Il.* 5, 774.) And again (6, 2), where it is said that the conflict between the Greeks and Trojans took place in the plain between the two rivers. One of the first questions, then, to be considered, in reconciling the topography of ancient Troy with the existing state of the country, is this: Are there two streams answering to Homer's description, which unite in a plain at a short distance from the sea, and fall into it between the Rhœtan and Sigean promontories? To this question it certainly appears, from recent observations, that we must reply in the negative. There are two streams which water the plain, supposed to be that of Troy, but they do not meet, except in some marshes formed principally by the *Mendere*, the larger of the two, which seems to have no exit into the Hellespont, while the smaller river partly flows into these stagnant pools, and partly into the sea near the Sigean cape. (*Choiseul Gouffier*.) It appears, however, from Strabo, or, rather, from Demetrius, whom he quotes, that when he wrote the junction did take place; for he says, "The Scamander and Simois advance, the one towards Sigeum, the other towards Rhœteum, and, after uniting their streams a little above New Ilium, fall into the sea near Sigeum, where they form what is called the Stomalimne" (597.—Compare 595). Pliny, also, when he speaks of the Palæscamander, evidently leads to the notion that the channel of that river had undergone a material alteration (6, 82). The observations of travellers afford likewise evidences of great changes having taken place in regard to the course of these streams; and it is said that the ancient common channel is yet to be traced, under the name of *Mendere*, near the point of *Kum-Kale*. The ancients themselves were aware of considerable alteration having taken place along the whole line of coast; for Hecataeus of Alexandria Troas, a lady who had written much on the *Iliad*, affirmed that the whole distance between New Ilium and the sea, which Strabo estimates at twelve stadia, had been formed by alluvial deposit (598); and recent researches prove that their distance is now nearly double. (*Leake's Asia Minor*, p. 295.) The great question, however, after all, respecting the two rivers alluded to, and on which the whole inquiry may be said to turn, is, Which is the Scamander, and which the Simois of Homer? If we refer for the solution of this question to Demetrius of Scepsis, who, from his knowledge of the Trojan district, appears to have been best qualified to decide upon it, we shall find that he looked upon the river now called *Mendere* as corresponding with the Scamander of Homer, a supposition which certainly derives support from the similarity of names; while he considered the Simois to be the stream now called *Giumbrek-sou*, which unites with the *Mendere* near the site of *Palos Aktschi*, supposed to represent the Pagus Iliensium, and which Demetrius himself identified with ancient Troy. But it has been rightly observed by those modern writers who have bestowed their attention on the subject, that the similarity of names is not a convincing reason in itself, since they have often been known to vary; and that, after all, we must refer to the original account, where we find the characteristics of the two rivers described in a manner which must eventually settle the whole question as far as regards their identity. A reference to the *Iliad* itself is the more necessary, as Demetrius does not appear to have satisfactorily explained, even to himself, certain doubts and difficulties which naturally arose from comparing his system of topography with that suggested by the perusal of the poet. Now it appears from more than one passage

that the Simois, according to Homer, had its source in Mount Ida (*Il.* 4, 475; 12, 22); and though, in the latter passage, the same thing is affirmed of the Scamander, it will be seen elsewhere that the sources of that river are so plainly described as situated close to the city of Troy, that they never could be said to rise in the main chain, unless Troy itself was placed there likewise. When speaking of the pursuit of Hector by Achilles beneath its walls (*Il.* 22, 143), he mentions certain marks, which point out the double sources of the Scamander, in so peculiar and striking a manner, that the discovery of them would, it seems, be decisive of the question, not only as far as regards the Trojan rivers, but also, in all probability, as to the situation of Troy itself, which, according to the poet, must have stood in the immediate vicinity of the sources. It is in tracing this remarkable and most distinguishing feature of the Homeric description, that modern research and industry have been particularly conspicuous, and have enabled us to solve a question which the ancients, from the want of similar information, could never understand. It is to Monsieur Choiseul Gouffier that the merit of first discovering the springs of the Scamander undoubtedly belongs; and though the phenomena of heat and cold, described by Homer, have not been so convincingly observed by subsequent travellers as by himself, yet, by taking the positive testimony of the natives themselves, who repeatedly corroborated the statement made by the poet, as well as the several experiments made by Choiseul Gouffier, and subsequently by Dubois (*Voy. Pitt.* 267-8.—*Leake's Asia Minor*, p. 283), we cannot refuse to acknowledge, at least, that there is very sufficient foundation for the poetical picture formed of the spot by Homer. M. Choiseul describes the hot source "as one abundant stream, which gushes out from different chinks and apertures formed in an ancient structure of stonework. About 400 yards higher up are to be seen some more springs, which fall together into a square stone basin, supported by some long blocks of granite. These limpid rills, after traversing a charming little wood, unite with the first sources, and together form the Scamander." (*Voy. Pitt.* 228.) The latter, which are the cold springs of Homer, are called *Kirk Guezler*, or the *Forty Fountains*, by the Turks. (*Ibid.* 268.) If we, besides, look to the general features which ought to belong to the Scamander and the Simois of Homer, we shall find that the former agrees remarkably with the beautiful little river of *Bounarbachi*, which is formed by the sources above mentioned, while the rapid Simois finds a fit representative in the impetuous *Mendere-sou*, which descends from the summits of Gargara, and fills its bed with trees torn from their roots, and huge fragments of rock. The former is described as a copious, rapid, and clear stream, whose banks are spread with flowers and shaded with various sorts of trees. (*Il.* 21, 1.—*Ib.* 124; 2, 467; 21, 350.) According to Mr. Chevalier, the river of *Bounarbachi* "is never subject to any increase or diminution; its waters are as pure and pellucid as crystal; its borders are covered with flowers; the same sort of trees and plants which grew near it when it was attacked by Vulcan, grow there still; willows, lote-trees, ash-trees, and reeds are yet to be seen on its banks, and eels are still caught in it." (*Descr. of Plain of Troy*, p. 63.—Compare *Voy. Pitt.* 2, p. 228.) It was doubtless on account of the beauty and copiousness of its stream that divine honours were paid to the Scamander by the Trojans. (*Il.* 5, 77.—Compare *Æsch.*, *Ægist.*, 10, p. 668.) The Simois, on the contrary, bears all the marks of a mighty torrent rushing down from the mountains with furious haste and relentless force. This is evident from the address of the Scamander to his brother god, invoking his aid against Achilles (*Il.* 21, 308); and all modern travellers and topographers concur in allowing that this is precisely

the character of the *Mendere*, which takes its rise in a deep cave below the highest summit of Mount Ida, and, after a tortuous course, between steep and craggy banks, of nearly thirty miles, in a rugged bed, which is nearly dry in summer, finds its way into the plain of *Bounarbachi*. It is true, that when Demetrius of Scepsis wrote, which is some years after the defeat of Antiochus by the Romans (*Strab.*, p. 593), the *Mendere* certainly bore the name of Scamander, for he describes the source of that river in Mount Ida very accurately (*ap. Strabo*, p. 602). I should admit, also, that the Scamander, which, according to Herodotus, was drained by the army of Xerxes (42), is the *Mendere*: Hellanicus likewise was of this opinion (*ap. Schol. II.*, 21, 242); but this objection may be fairly disposed of by supposing that the name of Scamander, which is certainly much oftener mentioned in Homer, had, in process of time, been transferred to the river whose course was longer, and body of water more considerable; whereas it is impossible, I conceive, to get over the difficulty presented by Homer's description of the double sources of the Scamander. The question may be fairly summed up in this way: either we must allow that Homer drew his local descriptions from real scenes, or that he only applied historical names to fanciful and ideal localities; in the latter case, all our interest in the comparative topography of Troy ceases, and it is a fruitless task to look for an application of the imagery traced by the poet to the actual face of things. But if a striking resemblance does present itself, we are bound, in justice to the poet, to take our stand on that ground, and, without regarding any hypothesis or system which may have been advanced or framed in ancient times, to seek for an application of the remaining local features traced in the *Iliad* in the immediate vicinity of the sources of *Bounarbachi*. Here, then, travellers have observed, a little above these springs and the village of the same name, a hill rising from the plain, generally well calculated for the site of a large town, and, in particular, satisfying many of the local requisites which the Homeric Troy must have possessed; such as a sufficient distance from the sea, and an elevated and commanding situation. This is evident from the epithets *ἡνευκέα*, *ἀνευρή*, and *δρυόεσσα*, which are so constantly applied to it. If we, besides, have a rock behind the town answering the purpose of such a citadel as the Pergamus of Troy is described to have been, "*Πέργαμος ἀκρῆ*," rising precipitously above the city, and presenting a situation of great strength, we shall have all that the nature of the poem, even in its historical character, ought to lead us to expect. (Compare *Voy. Pitt.*, 2, 238, and the plan there given.) With respect to minor objects alluded to by Homer in the course of his poem, such as the tombs or mounds of Ilus, *Æsyetes*, and Myrina, the Scopie and Erineus, or grove of wild fig-trees, it is, perhaps, too much to seek to identify, as the French topographers have somewhat fancifully done, with present appearances. It is certain that such indications cannot be relied upon, since the inhabitants of New Ilium, who also pretended that their town stood on the site of ancient Troy, boasted that they could show, close to their walls, these dubious vestiges of antiquity. (*Strabo*, 599.) With respect to the objection which may be brought against the situation here assigned to ancient Troy, that it would not have been possible for the flight of Hector to have taken place round the walls, as the poet has represented it, since the heights of *Bounarbachi* are skirted to the northeast by the deep and narrow gorge of the *Mendere*, which leaves no room even for a narrow footpath along its banks, the opinion is undoubtedly correct of those commentators and critics who think that we ought not to take the words of the poet in the sense which has commonly been assigned to them, but that it is better to suppose that Hector and Achilles ran only round

that portion of the city which fronts the plain from the Scæan gates to the sources of the Scamander and back again. (*Voy. Pitt.*, 2, p. 238-40.—*Le Chevalier's Description of Plain of Troy*, p. 135.—*Leake's Asia Minor*, p. 304.) The difficulty in that case will be satisfactorily removed, and there will then remain, we conceive, no valid objection to the system which recognises the hill of *Bounarbachi* as the representative of the ancient city of Priam, and which has been almost universally embraced by modern travellers and scholars. (*Cramer's Asia Minor*, vol. 1, p. 89, *seqq.*)—The student who is desirous of investigating the Trojan question more deeply, is referred to the following works on this subject: *A comparative View of the ancient and present State of the Troad*, by Robert Wood, subjoined to his essay on the Genius and Writings of Homer.—*Description of the Plain of Troy*, by M. Chevalier, Edinburgh, 4to, 1791 (Dalzell's translation).—The same work in German, by Heyne, with notes.—*Le Chevalier, Voyage dans la Troade*, Paris, 8vo, 1802.—*Observations on the Topography of the Plain of Troy*, by James Rennell, London, 1814, 4to.—*Chandler's History of Ilium or Troy*, London, 1802, 4to.—*Voyage Pittoresque de la Grèce*, par Choiseul Gouffier.—*Gell's Topography of Troy*, fol., London, 1804.—*Clarke's Travels*, vol. 3, p. 234, *seqq.*, ed. London.—*Leake's Geography of Asia Minor*, ch. 6.—*Hobhouse's Journey*, vol. 2, p. 128, *seqq.*—*Edinburgh Review*, vol. 6, p. 257, *seqq.*—*Quarterly Review*, vol. 9, p. 170, *seqq.*—*Maclaren's Dissertation on the Topography of the Plain of Troy*, London, 1822, 8vo.—*Turner's Tour to the Levant*, vol. 3, p. 222, *seqq.*—II. A small town, or rather village, in Egypt, to the east of, and near Memphis. The name probably owed its origin to a corruption, on the part of the Greeks, of some Egyptian appellation. The Greeks, however, had a fabulous tradition that it was founded by some Trojan captives, settled here by Menelaüs. (*Strabo*, 808.) In its vicinity was the Mons Troicus, where were quarries whence the stones for the Pyramids were obtained.

TROILUS, a son of Priam and Hecuba, slain by Achilles during the Trojan war. According to another legend, he was the son of Apollo and Hecuba. (*Tzet. ad Lycophr.*, 307.—*Eudocia*, p. 404, in the latter of whom *παῖδες* must be supplied, and the arrangement of the text altered.) Troilus was remarkable for youthful beauty. The manner of his death is differently related by ancient writers. (Consult *Dict. Cræ.*, 4, 9.—*Anna Fabr.*, *ad loc.*—*Virg.*, *Æn.*, 1, 478.)

TROPHONIUS, according to the common account, a celebrated architect, son of Erginus, king of Orchomenus in Boeotia. The legend relating to him is as follows: When Erginus had been overcome by Hercules, his affairs fell into so reduced a state, that, in order to retrieve them, he abstained from matrimony. As he grew rich and old, he wished to have a family; and, going to Delphi, he consulted the god, who gave him, in oracular phrase, the prudent advice to marry a young wife. (*Pausan.*, 9, 37, 3.) Erginus accordingly, following the counsel of the Pythia, married and had two sons, Trophonius and Agamedes, though some said Apollo was the father of the former. They became distinguished architects, and built the temple of Apollo at Delphi, and a treasury for King Hyrieus. (*Hom.*, *H. in Apollo*, 118.) In the wall of this last they placed a stone in such a manner that it could be taken out; and they, by this means, from time to time purloined the treasure. This amazed Hyrieus: for his locks and seals were untouched, and yet his wealth continually diminished. At length he set a trap for the thief, and Agamedes was caught. Trophonius, unable to extricate him, and fearing that, when found, he would be compelled by torture to discover his accomplice, cut off his head and carried it off. Trophonius himself is said to have been shortly afterward swal-

lowed up by the earth. (Pausan., l. c.) According to Pindar, when they had finished the temple of Delphi, they asked a reward of the god. He promised to give it on the seventh day, desiring them, meanwhile, to live cheerful and happy. On the seventh day they died in their sleep. (Pind., *ap. Plut., de Cons.—Op.*, vol. 7, p. 335, *ed. Hulten.*) There was a celebrated oracle of Trophonius at Lebadea in Boeotia. During a great drought, the Boeotians were, it is said, directed by the god at Delphi to seek aid of Trophonius in Lebadea. They came thither, but could find no oracle; one of them, however, happening to see a swarm of bees, they followed them to a chasm in the earth, which proved to be the place sought. (Pausan., 9, 40.) The writer just quoted gives a detailed account of the mode of consulting this oracle, from his own personal observation (9, 39). After going through certain ceremonies, the individual who sought to inquire into futurity was conducted to a chasm in the earth resembling an oven, and a ladder was furnished him by which to descend. After reaching the bottom of the chasm, he lay down on the ground in a certain posture, and was immediately drawn within a cavern, as if hurried away by the vortex of a most rapid river. Then he obtained the knowledge of which he was in quest. In some cases this was given to the applicants through the medium of the sight; at others through the hearing; but all returned through the same opening, and walked backward as they returned. It is a common notion, which we meet with in many modern works, that a visitor to the cave of Trophonius never smiled after his return. The language of Pausanias, however, expressly disproves this; for he observes that afterward the person recovers the use of his reason, and laughs just the same as before (*ὅστερον μὲντοι τὰ τε ἄλλα οὐδὲν τι φρονήσκει μείον ἢ πρότερον, καὶ γέλωτος ἐπ' αὐταῖσιν οἶ*). It is probable that the gloom, the mephitic vapours, and perhaps some violence from the priests, which the applicant encountered in his descent, might seriously affect his constitution, and render him melancholy; and thus Aristophanes strongly expresses terror by an observation in the *Clouds* (v. 807), which became proverbial, *ὡς δέδοται ἐνὶ ἔσσω καταβαίνον ὥσπερ ἐς Τροφώνιον*. One man, indeed, is noticed by Athenæus (14, p. 614, a), who did not recover his power of smiling until assisted by another oracle. Parmeniscus of Metapontum, finding himself thus wofully dispirited, went to Delphi for a remedy, and Apollo answered that he would find a cure if he resorted to his (Apollo's) mother. The hypochondriac interpreted this response as relating to his own native country; but, on being disappointed in his hope there, he sought relief in travelling. Touching by accident at Delos, he entered a temple of Latona; and, unexpectedly casting his eyes upon a statue of that goddess (Apollo's mother) most grotesquely sculptured, he burst into an involuntary fit of laughter.—Of other recorded descents into the cave of Trophonius, that of Timarchus, described by Plutarch (*De Socratis Genio.—Op.*, vol. 8, p. 332, *ed. Reiske*), is dismissed by the writer himself as a mere fable (*ὁ μὲν Τιμάρχου μῦθος οὐτός*). That of Apollonius of Tyana (*Philostrat., Vit. Apollon.*, 4, 8) was an irruption, not a legitimate visit. The impostor appears to have bullied the priests, and to have done exactly according to his pleasure both above and below ground. (*Encycl. Metropol.*, pt. 35, p. 664.)—Trophonius was named Zeus-Trophonius, that is, the *Nourishing* or *Sustaining* Zeus or Jupiter (from *τρέφω*, "to nourish"). He is probably a deity of the Pelasgian times, a giver of food from the bosom of the earth, and hence worshipped in a cavern. Agamædes (the *Thoughtful* or *Provident*) is, perhaps, only another title of the same being; and as corn was preserved in under-ground treasuries or granaries, the brothers may in one sense have been the builders, in another the plunderers of these receptacles. (Müller,

Orchom., p. 186, 180, *segg.*, 242.—*Strabo*, 431.—*Liv.*, 45, 27.)—The same trick related above in the case of Hyrieus, is said to have been played off on Augeas, king of Elis, by Trophonius, the *stepson* of Agamædes, the Arcadian architect. (*Charax, ap. Schol. ad Aristoph., Nub.*, 509.) It also formed an episode in the Telegonia; and there is likewise a very strong similarity between it and the legend related by Herodotus of the Egyptian king Rhampsinites (2, 121). Valckenæer thinks that the story was of Egyptian origin, and that some Greek transferred it from the pages of Herodotus to Trophonius and Agamædes. (*Valck. ad Herod.*, l. c.) Ilgen adopts the same opinion (*ad Hom., Hymn.*, p. 304). Bähr also coincides in this view of the subject, and refers the legend at once to early agriculture. (*Bähr, Excurs.*, 7, *ad Herod.*, l. c., vol. 1, p. 912.) On the other hand, Müller (*Orchom.*, p. 97) considers the fable as of Grecian origin, and makes it to have been borrowed by the priests of Egypt at a later day. (Compare *Buttmann, Die Mynæ der ältesten Zeit.—Mytholog.*, vol. 2, p. 208, *segg.*) The opinion of Valckenæer, however, is undoubtedly the true one.

TROS, son of Erichthonius and grandson of Dardanus. He married Callirhoë, daughter of the Scamander, by whom he had Ilus, Asæracus, and Ganymædes. He gave the name of Troja to the adjacent country. (*Apollod.*, 3, 12, 2.—*Vid. Treja.*)

TROSÆLUM, a town of Etruria, to the west of Ferentinum, some remains of which have been discovered at a place which bears the name of *Trosso*. Pliny tells us that this town, having been taken by cavalry alone, the Roman horse or *equites*, obtained, from that circumstance, the name of *Trossuli*. (*Plin.*, 33, 2.—Compare *Festus*, s. v. *Trossuli*.)

ΤΡΥΦΙΟΔΩΡΟΣ, a Greek poet supposed to have flourished about the fifth century of our era. He was a native of Egypt, but of his history nothing is known. Tryphiodorus wrote a poem under the title of *Μαραθωνιακά* (*Μαραθωνιακά*), another styled *καθ' Ἱπποδόμειαν*; a Lipogrammatic *Odyssey*; and a poem on the destruction of Troy, styled *Ἰλίου ἄλωσις*. The last is the only one of his productions which has reached us. It is in 681 verses, and appears rather to be the argument of some larger poem, which the poet had perhaps intended at one time to write. The Lipogrammatic *Odyssey* had this name given to it from a peculiar piece of affectation by which it was marked. The poet, according to some, interdicted himself, in each of his twenty-four books, the use of a particular letter of the alphabet. Eustathius, however, states that the letter Σ was banished from the entire poem. The best edition of the poem on the destruction of Troy is perhaps that of Wernicke, *Lips.*, 1819, 8vo. The edition of Northmore is also a good one, *Cantab.*, 1791, 8vo, and *Lond.*, 1804, 8vo. (*Schöll, Hist. Lit. Gr.*, vol. 6, p. 112.)

ΤΥΡΗΣ, a grammarian of Alexandria in the age of Augustus. We have some works of his remaining, one entitled *Πάθη λέξεων*, and another *Περὶ Τρόπων*. The best edition of these two is given in the *Museum Criticum* (vol. 1, p. 32, *segg.*).

ΤΥΒΕΚΟ, Q. ÆLIUS, a Roman consul, son-in-law of Paulus, the conqueror of Perseus. He is celebrated for his integrity. Sixteen of the Tuberos, with their wives and children, lived in a small house, and maintained themselves with the produce of a little field, which they cultivated with their own hands. The first piece of silver plate that entered the house of Tubero was a small cup which his father-in-law presented to him after he had conquered the king of Macedonia.

TUNUANO, two towns of Africa, called Major and Minor. The first was situate directly to the south of Tunis, and appears to be now *Tubernok*; the latter was southwest of Carthage, on the Bagradas, and is said to retain the ancient name. (*Plin.*, 5, 4.)

TUL

TUCCA, PLAUTIUS, a friend of Horace and Virgil. He and Varius were ordered by Augustus to revise the *Æneid* after Virgil's death. (*Vid.* Virgilius.)

TUDZA, a town of Umbria, northwest of Spoletium, and near the Tiber. It was originally one of the most important cities of Umbria, and famous for its worship of Mars. Its situation on a lofty hill rendered it a place of great strength. It is now *Todi*. (*Sil. Ital.*, 4, 222.—*Id.*, 464.—*Cramer's Anc. Italy*, vol. 1, p. 273.)

TULINGI, a people of Gaul, reckoned among the Helvetii by some, but more correctly their neighbours, and of Germanic origin. (*Cæs.*, B. G., 1, 6.) The modern *Stuttgarten* is thought to preserve traces of their name. (*Oberlin. ad Cæs.*, l. c.)

TULLIA, I. a daughter of Servius Tullius, king of Rome. She married Tarquin the Proud after she had made away with her first husband, Aruns Tarquinius. (*Vid.* Servius Tullius.)—II. A daughter of Cicero by Terentia. She was three times married. Her first husband, Caius Piso, died a short time before Cicero's return from exile. At the end of about a year, she was married to a second husband, Furius Crassipes, who appears to have been a patrician of rank and dignity. She was afterward divorced from this second husband, and united to P. Cornelius Dolabella. The life and character, however, of this last-mentioned individual proved so contrary to the manners and temper both of Cicero and his daughter, that a divorce ensued in this case also. Cicero entertained the deepest affection for this his favourite child, and her death, at the age of 32, proved to him a source of the bitterest sorrow. (*Vid.* remarks under the article Cicero, page 345, column 2.)—Cælius Rhodiginus tells us, that in the time of Sixtus IV. there was found near Rome, on the Appian Way, over against the tomb of Cicero, the body of a woman whose hair was dressed up in network of gold, and which, from the inscription, was thought to be the body of Tullia. It was quite entire, and so well preserved by spices as to have suffered no injury from time; yet, when it was removed into the city, it mouldered away in three days. But this was only the hasty conjecture of some learned men of the time, which, for want of authority to support it, soon vanished of itself; for no inscription was ever produced to confirm it, nor has it been mentioned by any other author that there was any sepulchre of Cicero on the Appian Way. (*Cæli. Rhod.*, *Lect. Antiq.*, 3, 24.—*Middleton's Life of Cicero*, vol. 2, p. 149, *in not.*)

TULLIA LEX, I. *de Senatu*, by M. Tullius Cicero, A.U.C. 690, enacted that those who had a *libera legatio* granted them by the senate should hold it no more than one year. Such senators as had a *libera legatio* travelled through the provinces without any expense, as if they were employed in the affairs of the state.—II. Another, *de Ambitu*, by the same, the same year. It forbade any person, two years before he canvassed for an office, to exhibit a show of gladiators, unless that task had devolved upon him by will. Senators guilty of the crime of *Ambitus* were punished with the *aquæ et ignis interdictio* for ten years, and the penalty inflicted on the commons was more severe than that of the Cælpurnian law. (*Dio Cass.*, 37, 29.—*Cic.*, *pro Mur.*, 32, *seqq.*)

TULLIANUM, a name given to part of the public prison at Rome. The prison was originally built by Ancus Marcius, and was afterward enlarged by Servius Tullius, whence that part of it which was under ground, and built by him, received the name of *Tullianum*. The full expression is *Tullianum robur*, from its walls having been originally of oak; afterward, however, they were built of stone. (*Sall.*, *Cat.*, 55.) This dungeon now serves as a subterranean chapel to a small church built on the spot, called *San Pietro in Carcere*, in commemoration of St. Peter, who is sup-

TUL

posed to have been confined there. Its only entrance, when a dungeon, was through the arched roof; now, however, there is a door in the side wall. "Notwithstanding the change," observes Eustace, "it has still a most appalling appearance." (*Class. Tour*, vol. 1, p. 365, *Lond. ed.*)

TULLUS HOSTILIUS, the third king of Rome, and successor of Numa. An interregnum followed the death of the last-mentioned monarch. At length Tullus Hostilius, a man of Latin extraction, was chosen by the *curiæ*; and his election having been sanctioned by the auspices, he, like his predecessor, submitted to the *comitis curiæ* the laws which conferred upon him full regal power. The new king was more desirous of military renown than of the less dazzling fame which may be gained by cultivating the arts of peace. An opportunity was soon offered for indulging his warlike disposition. Plundering incursions had been made into each other's territories by the borderers of the two states of Rome and Alba. Both nations sent ambassadors at the same time to demand redress. The Roman ambassadors had private orders from Tullus to be peremptory in their demands, and to limit their stay within the stated period of thirty days. They did so, and, receiving no immediate satisfaction, returned to Rome. In the mean time, Tullus amused the Alban embassy by shows and banquets, till, when they opened their commission, he had it in his power to answer that they had already in vain sought redress from Alba, and that now they must prepare for the events of a war, the blame of originating which was chargeable upon them. Under the command of Cluilius, the Albans sent a powerful army against Rome, and encamped about five miles from the city. There Cluilius died, and the Albans elected Mettius Fufetius in his stead. Tullus Hostilius, at the head of the Romans, now drew near the Albans. But, when the two armies were ready for a general engagement, Mettius, the Alban general, proposed to save the effusion of blood by committing the fortune of the war to the valour of certain champions selected from either side. To this proposition Tullus agreed; and the affair of the Horatii and Curiatii took place. (*Vid.* Horatius II.) After the termination of this memorable combat, notwithstanding the agreement which had been entered into between the Romans and Albans, the latter were unwilling to forfeit their national independence without an additional struggle. This, however, they were desirous to avoid provoking single-handed. They accordingly encouraged the people of Fidenæ to revolt, by giving them secret promises of assistance. Tullus Hostilius immediately levied a Roman army, and summoned the Albans to his aid. A battle ensued, in which Mettius Fufetius endeavoured to act a treacherous part, but wanted courage and decision to fulfil his own perfidious pledge, and, on the morrow, was put to a cruel death by the Roman king. (*Vid.* Mettius Fufetius.) After the punishment of Mettius, it was decreed that Alba should be razed to the ground, and the whole Alban people removed to Rome, to prevent the possibility of future strife. Not only the walls of Alba, but every human habitation, was totally demolished, and the temples of the gods alone left standing in solitary majesty amid the ruins. But, though Tullus had thus put an end to the separate existence of Alba, he did not reduce its inhabitants to slavery. He assigned them habitations on the Cælian Hill, which had formerly, so said the legend, been possessed by the followers of Omnes Vibenna. Soon after these events, Tullus made war upon the Sabines, and in a bloody, and for some time doubtful encounter, again obtained the victory. Another war arose with the confederate towns of Latium, who began to dread the growing power of Rome after the destruction of Alba. The Latin war terminated without any decided reverses sustained by either party; and an

alliance was formed between the Romans and the Latins. Tullus had now leisure to direct his attention to the arts of peace, in which, however, he did not equally excel. The only public works ascribed to him were the enclosing of a space for the Comitia, or assembly of the people, and the building of a Curia, or senate-house. Towards the end of his reign his mind was disturbed by prodigies, indicating the wrath of the gods for religion neglected and temples left desolate. A shower of stones fell from heaven on the Alban Mount, and the awful accents of a supernatural voice were heard to issue from the consecrated summit of the hill. A plague swept away numbers of the Roman people. The king himself sickened; and, from having been neglectful of religion, became the slave of superstitious terrors. In vain did he supplicate the gods. He had disregarded them in the days of his prosperity, and in his adversity no deity regarded his prayers or sent relief. In his despair he presumed to use the divinations of Numa, by the rites of Jupiter Elicius (*vid. Elicius*); but the only answer returned was the lightning of the offended gods, by which Tullus himself and his whole household were smitten and consumed. Another account, however, ascribed his death to an act of treachery and assassination on the part of Ancus Marcius, who could not brook that he, a descendant of Numa, should be kept from the throne by a man of private origin. Such is the legend of Tullus Hostilius. This monarch is said to have reigned two-and-thirty years. (*Liv.*, 1, 23, *seqq.*—*Dion. Hal.*, 3, 1, *seqq.*—*Hetherington's History of Rome*, p. 13, *seqq.*)—As the reigns of Romulus and Numa represent the establishment of two of the tribes or constituent elements of the Roman people, so the reign of Tullus Hostilius seems to comprehend the development of the third tribe, or Luceres. To him, as to Romulus and Numa, is ascribed a division of lands, by which portions were assigned to the needy citizens, who, as yet, possessed no property in the soil. It has been conjectured that the Luceres had hitherto held their lands, not in absolute property, and not as common proprietors of the public domain, but as vassals or tenants of the state, which would be represented in the person of the king. That the distribution of Tullus Hostilius effected the third tribe is rendered probable by its being connected with the assignment of ground for building on the Caelian Mount, and the enclosure of that part of the city within one line of fortification with the older town, if there is any weight in the arguments that are adduced to show that the town on the Caelian was the settlement of the Luceres. From the circumstance that Hostilius himself dwelt there, and that he derived his origin from the Latin town Medullia (*Dion. Hal.*, 3, 1), it may be conjectured that he himself was considered to belong to the Luceres, as Romulus to the Ramnes, and Numa to the Titienses. (*Malden's History of Rome*, p. 127, *seq.*)

TUNES (Τύνις, ἡρος), a city of Africa, southwest of and near to Carthage, being, according to Polybius (14, 10), only 120 stadia from the latter place. The Peutinger table, however, gives the distance more correctly at ten miles. It first rose into consequence after the fall of Carthage. It is now *Tunis*. Diodorus Siculus calls it "White Tunis," perhaps from the chalky cliffs that lie around it when viewed from the sea. (*Mannert, Geogr.*, vol. 10, pt. 2, p. 262.)

TUNGRI, a German tribe, probably the same with the *Adiatici* of Cæsar, and the first that crossed the Rhine. They became subsequently a powerful people in Germania Inferior. (*Tac., Germ.*, 2.—*Ann. Marc.*, 15, 11.)

TURDETANI, a people of Bætica in Spain, in the southeastern part. They extended along the coast, from the Anas to the Bastuli Peni, and their territory was famed for its beauty and fertility, and by some of

the ancient writers was considered the most favoured spot on the whole earth. Here, too, Strabo places the Elysian fields of Homer. This district, besides being very productive, was enabled to carry on an extensive and lucrative commerce with the nations of the interior, by means of the Bætia, which traversed it. (*Polyb.*, 34, 9.—*Liv.*, 21, 6.—*Id.*, 24, 42.)

TURDULI, a people of Bætica in Spain, situate to the north and northeast of the Turdetani. (*Mela*, 3, 1.—*Plin.*, 3, 1.—*Id. ibid.*, 4, 20.)

TURIAS, a river of Spain, in the territory of the Edetani, near Valentia; now the *Guadalaviar*. (*Mela*, 2, 16.—*Plin.*, 3, 3.)

TURNUS, king of the Rutuli, son of Daunus, king of Apulia, and Ventilia, a nymph who was sister to Amata, the wife of Latinus. Lavinia, the daughter of Latinus, was betrothed to him, but the arrival of Æneas deprived him of his intended bride, and in the war which took place between the Latins and the Trojans Turnus was slain by Æneas. (*Virg., Æn.*, 7, 56, *seqq.*)

TURONNI, I. a people in the interior of Gallia Lugdunensis, whose territory answers to the modern *Touraine*. (*Ann. Marc.*, 15, 11.—*Tac., Ann.*, 3, 41.)

—II. A German tribe, settled in what is now the southern part of Hesse, according to Mannert.

TURRIS, I. *HANNIBALIS*, a small place on the coast of Africa, below Thapsus. From this Hannibal took his departure for Asia, when he was banished by his factious and ungrateful countrymen from Carthage. It is now *Mahdia*.—II. Stratonis, the previous name of Cæsarea, on the coast of Palestine. (*Vid. Cæsarea*.)

TUSCI, the inhabitants of Etruria. (*Vid. Etruria*.)

TUSCULINUM, the name of Cicero's villa near Tusculum, and where the scene of his *Tusculan Disputations* is laid. (*Vid. Cicero*, p. 347, col. 2.)

TUSCULUM, a town of Latium, on the summit of the ridge of hills which forms the continuation of the Alban Mount, and above the modern town of *Frascati*. The numerous remains of the ancient place still bear the name of *il Tuscolo*. According to Dionysius (10, 20) and Josephus (*Bell. Jud.*, 18, 8), it was distant about one hundred stadia from Rome, or twelve miles and a half. The foundation of Tusculum is ascribed to Telegonus, the son of Circe and Ulysses. (*Ovid, Fast.*, 3, 91.—*Id.*, 4, 91.—*Propert.*, 2, 35.—*Sil. Ital.*, 7, 691.) It must have been one of the most considerable of the Latin cities in the time of the second Tarquin, since that prince is said to have sought the alliance of Octavius Manlius, chief of Tusculum, and to have given him his daughter in marriage. (*Liv.*, 1, 49.) By this measure Tarquin secured the co-operation of almost all the Latin cities in his subsequent attempts to recover the throne he had lost.—In the second Punic war Tusculum successfully resisted the attack of Hannibal.—This place could boast of having given birth to M. Porcius Cato, several of the Fabii, &c. Its proximity to Rome, the beauty of its situation, as well as the salubrity of its climate, made it a favourite summer residence with the wealthy Romans. Strabo, who has given us a very accurate description of its position, says that, on the side towards Rome, the hills of Tusculum were covered with plantations and palaces, the effect of which was most striking. (*Strab.*, 239.) Of these villas none can be more interesting to us than that of Cicero. (*Vid. Tusculanum*.) Lucullus also had a celebrated villa and gardens at this place. Horace likewise alludes to a villa of Mæcenas here. (*Cramer's Anc. Italy*, vol. 2, p. 47.)

TUSCUM MARE, a part of the Mediterranean, on the coast of Etruria, called also *Tyrrhenum Mare* and *Mare Inferum*.

TYANA, a city of Cappadocia, strongly fortified by nature and art, lying on the main road to Cilicia and

TYN

Syria, and at the foot of Mount Taurus. Strabo says it was built on what was called the causeway of Semiramia. (*Strabo*, 537.) Cellarius is of opinion that the town called Dana by Xenophon, in the *Anabasis* (1, 2, 20), should be identified with Tyana (*Geogr. Antiq.*, vol. 2, p. 291), and this supposition has great probability to recommend it.—The Greeks, always led by a similarity of name to connect the origin of cities with their fables, pretended that it owed its foundation to Thoas, the king of the Tauric Chersonese, in his pursuit thither of Pylades and Orestes. (*Arrian, Peripl. Eux.*, p. 6.) From him it was called Thoana, and afterward Tuana. (*Steph. Byz.*, s. v. *Τύανα*.) Tyana was the native city of the impostor Apollonius. At a later period it became the see of a Christian bishop, and the metropolis of Cappadocia Secunda. (*Greg. Naz., Epist.*, 33.—*Id., Orat.*, 20, p. 355.) This took place in the reign of Valens. Its capture by the Saracens is recorded by Cedrenus (p. 477). The modern *Ketch-hissar*, near the foot of the central chain of Taurus and the Cilician Pass, is thought to correspond to the ancient city. Captain Kinneir, in one of his journeys, found considerable ruins here. (*Cramer's Asia Minor*, vol. 2, p. 128, *seqq.*)

TYANITIS, a district in the southern part of Cappadocia, near the range of Taurus. Its capital was Tyana, from which it derived its name. (*Vid.* Tyana.)

TYBERIS. *Vid.* Tiberis.

TYCHE, I. one of the Oceanides. (*Hesiod, Th.*, 360.)—II. A part of the town of Syracuse. It contained a temple of Fortune (*Τύχη*), whence the name. (*Cic., Verr.*, 4, 53.)

TYDEUS (two syllables), a son of Ceneus, king of Calydon. He fled from his country after the accidental murder of one of his friends, and found a safe asylum in the court of Adrastus, king of Argos, whose daughter, Deiphyle, he married. When Adrastus wished to place his son-in-law Polynices on the throne of Thebes, Tydeus undertook to announce the war to Eteocles, who usurped the crown. The reception he met with provoked his resentment; he challenged Eteocles and his principal chieftains, and worsted them in conflict. On leaving Thebes and entering upon his way home, he fell into an ambuscade of fifty of the foe, purposely planted to destroy him, and he slew all but one, who was permitted to return to Thebes, to bear the tidings of the fate of his companions. He was one of the seven chiefs of the army of Adrastus, and during the Theban war he signalized his valour in a marked degree, and made great slaughter of the foe, till he was at last mortally wounded by Melanippus. As he lay expiring, Minerva hastened to him with a medicine which she had obtained from Jupiter, and which would make him immortal (*Bacchyl., ap. Schol. ad Aristoph., Av.*, 1536); but Amphiarus, who hated him as a chief cause of the war, perceiving what the goddess was about, cut off the head of Melanippus, whom Tydeus, though wounded, had slain, and brought it to him. The savage warrior opened it and devoured the brain, and Minerva, in disgust, withheld her aid. His remains were interred at Argos, where a monument, said to be his, was still seen in the age of Pausanias. (*Hom., Il.*, 4, 365, *seqq.*—*Apollod.*, 1, 8, 3.—*Æsch., Sept. C. Theb.*, 372, *seqq.*, ed. Schol.—*Pausan.*, 9, 18.)

TYPIDES, a patronymic of Diomedes, as son of Tydeus. (*Virg., Æn.*, 1, 101.—*Horat., Od.*, 1, 15, 20.)

TYLOS, an island in the Sinus Persicus, on the Arabian coast, the pearl fishery on whose coasts has rendered it famous in antiquity; and the same circumstance still contributes to its renown under the name of *Bakraim*, which in Arabic signifies two seas. (*Ptol.—Theophrast., Hist. Plant.*, 4, 9.—*Id. ibid.*, 5, 6.)

TYNDARIDÆ, a patronymic of the children of Tyndarus, as Castor, Pollux, Helen, &c.

TYNDARIS, I. a patronymic of Helen, as daughter

TYR

of Tyndarus. (*Virg., Æn.*, 2, 569.)—II. A town of Sicily, on the northern coast, southwest of Messina. It was founded by the elder Dionysius, and became in time an important city. A part of the ancient site has been inundated by the sea. (*Liv.*, 36, 2.)

TYNDARUS, a son of Cebalus and Gorgophone. He was king of Lacedæmon, and married the celebrated Leda, who bore him Timandra, Philonoë, &c., and who also became mother of Pollux and Helen by Jupiter. (*Vid.* Leda, Castor, Pollux, Clytemnestra, &c.)

TYPHŌUS (three syllables), a monstrous giant, who warred against the gods. (*Vid.* Typhon.)

TYPHON or **TYPHAON**, a monstrous giant, whom Earth, enraged at the destruction of her previous giant-progeny, brought forth to contend with the gods. The stature of this being reached the sky; fire flashed from his eyes; he buried glowing rocks, with loud cries and hissing, against heaven, and flame and storm rushed from his mouth. The gods, in dismay, fled to Egypt, and concealed themselves under the form of different animals. Jupiter at last, after a severe conflict, overcame him, and placed him beneath Ætna, or, as others said, in the Palus Serbonia, or "Serbonian bog." (*Pind., Pyth.*, 1, 29, *seq.*—*Id., fragm. Epinik.*, 5.—*Æsch., Prom. V.*, 361, *seqq.*—*Apoll. Rhod.*, 2, 1215.)—Typhon is the same apparently with Typhoeus, though Hesiod makes a difference between them. Their names come from *τύφος*, "to smoke," and they are evidently personifications of storms and volcanic eruptions. Typhon is made the sire of the Chimæra, Echidna, and other monsters. The Greeks gave his name to the Egyptian demon Baby, the opponent of Osiris.—The flight of the gods into Egypt is a bungling attempt at connecting the Greek mythology with the animal worship of that country. This change of form on their part was related by Pindar. (*Porphy., de Abst.*, 3, p. 251.—*Keightley's Mythology*, p. 263.)

TYRANNION, a grammarian of Pontus, intimate with Cicero. His original name was Theophrastus, and he received that of Tyrannion from his austerity to his pupils. He was taken by Lucullus, and restored to his liberty by Murena. Tyrannion opened a school at Rome, and taught with considerable success. He had access to the library of Apellicon of Teos when brought to Rome, and from him copies of Aristotle's works were obtained by Andronicus of Rhodes. (*Vid.* Apellicon.)

TYRAS. *Vid.* Danastus.

TYROS, a city of Phœnicia. (*Vid.* Tyrus.)

TYRRHËNI. *Vid.* Etruria.

TYRRHËNUM MARE, that part of the Mediterranean which lies on the coast of Etruria. It is also called *Inferum*, as washing the lower shore of the peninsula. (*Vid.* Italia.)

TYRTÆUS, a celebrated poet of antiquity. His age is determined by the second Messenian war, in which he bore a part. If, with Pausanias, this war is placed between 685 and 668 B.C., Tyrtæus would fall at the same time as, or even earlier than, the circumstances of the Cimmerian invasion mentioned by Callinus; and we should then expect to find that Tyrtæus, and not Callinus, was considered by the ancients as the originator of the elegy. As, however, the reverse is the fact, this reason may be added to others for thinking that the second Messenian war did not take place till after 660 B.C., which must be considered as the period at which Callinus flourished. We certainly do not give implicit credit to the story of later writers, that Tyrtæus was a lame schoolmaster at Athens, sent out of insolence by the Athenians to the Spartans, who at the command of an oracle had applied to them for a leader in the Messenian war. So much of this account, however, may be received as true, that Tyrtæus came from Attica to the Lacedæmonians; the place of his abode being, according to a precise statement, Aphidnæ, an Athenian town, which is placed by

the legends about the Dioscuri in very early connexion with Laeonia. In all probability, his lameness was only a satirical allusion to his use of the elegiac measure, or alternating hexameter and pentameter, the latter being shorter by a foot than the former.—Tyrteus came to the Lacedaemonians at a time when they were not only brought into great straits from without by the boldness of Aristomenes and the desperate courage of the Messenians, but when the state was also rent with internal discord. In this condition of the Spartan commonwealth Tyrteus composed the most celebrated of his elegies, which, from its subject, was called *Eunomia*, that is, "Justice" or "Good Government" (also *Politeia*, or "the Constitution"). But the *Eunomia* was neither the only nor yet the first elegy in which Tyrteus stimulated the Lacedaemonians to a bold defence against the Messenians. Exhortations to bravery was the theme which this poet took for many elegies, and wrote on it with unceasing spirit and ever new invention. Never was the duty and the honour of bravery impressed on the youth of a nation with so much beauty and force of language, by such natural and touching motives. That these poems breathed a truly Spartan spirit, and that the Spartans knew how to value them, is proved by the constant use made of them in the military expeditions. When the Spartans were on a campaign, it was their custom, after the evening meal, when the psan had been sung in honour of the gods, to recite these elegies. On these occasions the whole mass did not join in the chant, but individuals vied with each other in repeating the verses in a manner worthy of their subject. The successful competitor then received from the polemarch or commander a larger portion of meat than the others, a distinction suitable to the simple taste of the Spartans. This kind of recitation was so well adapted to the elegy, that it is highly probable that Tyrteus himself first published his elegies in this manner. The elegies of Tyrteus, however, were never sung on the march of the army, and in the battle itself; for these occasions a strain of another kind was composed by the same poet, namely, the anapestic marches. (*Müller, Hist. Gr. Lit.*, p. 110, *seqq.*)—We have several fragments remaining of the elegies of Tyrteus. They are written in the Ionic dialect, though addressed to Dorians, and are full of enthusiastic and patriotic feeling. The anapestic marches, on the other hand (*μέλη πολεμώτῃρια*), were written in Doric. Of these only a single fragment has come down to us.—The best editions of Tyrteus are that of Klotz, *Breslau*, 1764, 8vo, and that contained in Gaisford's *Poeta Minores Graeci*, vol. 1, p. 429, *seqq.*

TYRUS or TYZOS, a very ancient city of Phœnicia, built by the Sidonians. "The strong city of Tzor" is mentioned in the book of Joshua (19, 29), and its situation is specified as being between "great Zidon" and Achzib. Yet learned men have contended that in Joshua's time Tyre was not built. Homer, it has been remarked, never speaks of Tyre, but only of Sidon; and Josephus states that Tyre was built not above 240 years before the temple of Solomon, which would be A.M. 2760, two hundred years after Joshua. That there was such a city as Tyre, however, in the days of Homer, is quite certain, seeing that, in the reign of Solomon, there was a king of Tyre; and we apprehend that the Scripture text will be held a sufficient proof of its having had an existence before the land of Canaan was conquered by the Israelites. Nor is Josephus's chronology so accurate as to render his authority on such a point very important. There was Insular Tyre, and Tyrus on the Continent, or Pala-Tyrus; and it is supposed by some learned writers that the island was not inhabited till after the invasion of Nebuchadnezzar. But this last supposition is not merely at variance with the doubtful authority of Josephus, but is scarcely reconcilable with the language of

the prophets Isaiah and Ezekiel, who both seem to speak of Tyre as an isle. (*Isaiah*, 23, 2, 6.—*Ezek.*, 26, 17.—*Id.*, 27, 3.—*Id.*, 28, 2.) Nor is it probable that the advantageous position of the isle would be altogether neglected by a maritime people. The coast would, indeed, first be occupied, and the fortified city mentioned in the book of Joshua was in all probability on the Continent; but, as the commercial importance and wealth of the port increased, the island would naturally be inhabited, and it must have been considered as the place of the greatest security. Volney supposes that the Tyrians retired to their isle when compelled to abandon the ancient city to Nebuchadnezzar, and that, till that time, the dearth of water had prevented its being much built upon. Certain it is, that when, at length, Nebuchadnezzar took the city, he found it so impoverished as to afford him no compensation for his labour. (*Ezek.*, 29, 18, *seqq.*) The chief edifices were at all events on the mainland, and to these the denunciations of total ruin strictly apply. Pala-Tyrus never rose from its overthrow by the Chaldean conqueror, and the Macedonian completed its destruction; at the same time, the wealth and commerce of Insular Tyre were for the time destroyed, though it afterward recovered from the effects of its invasion.—Ancient Tyre, then, probably consisted of the fortified city, which commanded a considerable territory on the coast, and of the port which was "strong in the sea." On that side it had little to fear from invaders, as the Tyrians were lords of the sea; and, accordingly, it does not appear that its Chaldean conqueror ventured upon a maritime assault. Josephus, indeed, states that Salmaneser, king of Assyria, made war against the Tyrians with a fleet of sixty ships, manned by 800 rowers. The Tyrians had but twelve ships, yet they obtained the victory, dispersing the Assyrian fleet, and taking 500 prisoners. Salmaneser then returned to Nineveh, leaving his land-forces before Tyre, where they remained for five years, but were unable to take the city. (*Joseph., Ant.*, 9, 14.) This expedition is supposed to have taken place in the reign of Hezekiah, king of Judah, about A.M. 3287, or 717 B.C. It must have been about this period, or a few years earlier, that Isaiah delivered his oracle against Tyre, in which he specifically declared that it should be destroyed, not by the power which then threatened it, but by the Chaldeans, a people "formerly of no account." (*Isaiah*, 23, 13.) The more detailed predictions of the prophet Ezekiel were delivered a hundred and twenty years after, B.C. 588, almost immediately before the Chaldean invasion. The army of Nebuchadnezzar is said to have lain before Tyre thirteen years, and it was not taken till the fifteenth year after the captivity, B.C. 573, more than seventeen hundred years, according to Josephus, after its foundation. Its destruction, then, must have been entire; all the inhabitants were put to the sword or led into captivity, the walls were razed to the ground, and it was made "a terror" and a desolation. It is remarkable, that one reason assigned by the prophet Ezekiel for the punishment of this proud city is its exultation at the destruction of Jerusalem: "I shall be replenished, now she is laid waste" (26, 2). This clearly indicates that its overthrow was posterior to that event; and if we take the seventy years during which it was predicted by Isaiah (23, 16) that Tyre should be forgotten, to denote a definite term (which seems the most natural sense), we may conclude that it was not rebuilt till the same number of years after the return of the Jews from Babylon. Old Tyre, the continental city, remained, however, in ruins up to the period of the Macedonian invasion. Insular Tyre had then risen to be a city of very considerable wealth and political importance; and by sea her fleets were triumphant. According to Pliny (9, 36), it was 19 miles in circumference, including Old Tyre, but without it about four. It was

the rubbish of Old Tyre, thirty furlongs off, that supplied materials for the gigantic mole constructed by Alexander, of 200 feet in breadth, extending all the way from the continent to the island, a distance of three quarters of a mile. The sea that formerly separated them was shallow near the shore, but towards the island it is said to have been three fathoms in depth. The causeway has probably been enlarged by the sand thrown up by the sea, which now covers the surface of the isthmus. Tyre was taken by the Macedonian conqueror after a siege of eight months, B.C. 332, two hundred and forty-one years after its destruction by Nebuchadnezzar, and, consequently, about one hundred and seventy after it had been rebuilt. Though now subjugated, it was not, however, totally destroyed, since, only thirty years after, it was an object of contention to Alexander's successors. The fleet of Antigonus invested and blockaded it for thirteen months, at the expiration of which it was compelled to surrender, and received a garrison of his troops for its defence. About three years after it was invested by Pompey in person, and, owing to a mutiny in the garrison, fell into his hands. Its history is, after this period, identified with that of Syria. In the apostolic age it seems to have regained some measure of its ancient character as a trading town; and St. Paul, in touching here on one occasion, in his way back from Macedonia, found a number of Christian believers, with whom he spent a week; so that the gospel must early have been preached to the Tyrians. (*Acts*, 21, 3.) Josephus, in speaking of the city of Zabulon as of admirable beauty, says that its houses were built like those in Tyre, and Sidon, and Berytus. Strabo also speaks of the loftiness and beauty of the buildings. In ecclesiastical history it is distinguished as the first archiepiscopal see under the patriarchate of Jerusalem. It shared the fate of the country in the Saracen invasion in the beginning of the seventh century. It was reconquered by the crusaders in the twelfth, and formed a royal domain of the kingdom of Jerusalem, as well as an archiepiscopal see. William of Tyre, the well-known historian, an Englishman, was the first archbishop. In 1289 it was retaken by the Saracens, the Christians being permitted to remove with their effects. When the sultan Selim divided Syria into pashalics, Tyre, which had probably gone to decay with the depression of commerce, was merged in the territory of Sidon. In 1766 it was taken possession of by the Motaliahs, who repaired the port, and enclosed it, on the land side, with a wall twenty feet high. The wall was standing, but the repairs had gone to ruin, at the time of Volney's visit (1784). He noticed, however, the choir of the ancient church mentioned by Maundrell, together with some columns of red granite, of a species unknown in Syria, which Djezzar Pacha wanted to remove to Acre, but could find no engineers able to accomplish it. It was at that time a miserable village: its exports consisted of a few sacks of corn and of cotton; and the only merchant of which it could boast was a solitary Greek, in the service of the French factory at Sidon, who could hardly gain a livelihood. It is only within the past half century that it has once more begun to lift up its head from the dust. (*Modern Traveller*, pt. 3, p. 46, *seqq.*)

TRAPPAUS, a city of Africa Propria, not far from the coast, below Turris Hannibalis. It is supposed to coincide as to position with the modern *el-Jem*. (*Ptol.*—*Anc.*, *Hist. Bell. Afr.*, c. 26, 76.—*Plin.*, 5, 4.)

V.

VAGGA. *Vid.* Vaga.

VACOMI, a people at the north of Spain, occupying, according to Mannert, what is now the greater part of *Valladolid*, *Leon*, *Palencia*, and the province of *Toro*. (*Liv.*, 21, 5.—*Id.*, 35, 7.)

VACUNA, a goddess worshipped principally by the Sabines, but also by the Latins. According to some authorities she was identical with Victoria, and the Lake Cutilis was sacred to her. (*Arnob.*, 3, p. 112, *ed. Stewech.*—*Spangenberg, De Vet. Lat. Rel. Domest.*, p. 47.) Others made her analogous to Diana, Ceres, or Minerva. This last was the opinion of Varro. (*Schol. ad Horat., Epist.*, 1, 10, 49.) Her name apparently comes from *vaco*, the reason of which etymology is given as follows by Varro: "*quod ea maxime hi gaudent qui sapientia vacant.*" (*Varro, ap. Schol., l. c.*)

VADIMONIS LACUS, a lake of Etruria, whose waters were sulphureous. It formerly existed close to *Basimo*, but is now filled up with peat and rushes. (*Seneca, Nat. Hist. Quast.*, 3, 25.—*Plin.*, 2, 25.) This lake is celebrated in the history of Rome for having witnessed the total defeat of the Etruscans by the Romans, A.U.C. 444, a defeat so decisive that they never could recover from its effects. (*Livy*, 9, 39.) Another battle was again fought here by the Etruscans, in conjunction with the Gauls, against the Romans, with the same ill success. (*Polyb.*, 2, 20.—*Flor.*, 1, 12.)

VAGA, sometimes, but improperly, written Vacca, a town of Africa, west of Carthage, on the river Rubricatus, and celebrated among the African and Numidian cities for its extensive traffic. D'Anville and Barbié du Bocage recognise traces of the ancient name in the modern *Vegia* or *Beja*, in the district of Tunisia. (*Sall., Jug.*, 47.—*Sil. Ital.*, 3, 259.)

VAGINI, or, more correctly, VAGIENNI, a people of Liguria, in the interior of the country, and near the angle formed by the separation of the Apennines and Alps. Their name, as D'Anville observes, is still apparent in that of *Vicenza*. Their capital was Augusta Vagiennorum, now *Vico*, according to D'Anville, but more correctly *Bene*, according to Darandi. (*Sil. Ital.*, 3, 607.—*Plin.*, 3, 5.—*Cramer's Ancient Italy*, vol. 1, p. 27.)

VARILLIS, the western arm of the Rhine, now the *Waal*. (*Cæs.*, 4, 19.—*Tac.*, *Ann.*, 2, 6.)

VALENS, FLAVIUS, an emperor of the East. His biography will be given in conjunction with that of his brother Valentinian I. (*Vid.* Valentinianus I.)

VALENTIA, I. a secret and hallowed name of Roma. (*Plin.*, 3, 5.—*Id. ibid.*, 28, 2.—*Serv. ad Æn.*, 1, 280.)—II. A city of the Segovellauni or Segalauni, in Gallia Narbonensis, now *Valence*. (*Plin.*, 3, 4.) It lay on the eastern side of the Rhodanus, above Alba Augusta.—III. A city of Mauritania Tingitana, north of Volubile Oppidum, and south of Lixum, situate on the river Subur. It was also called *Baana*, and is now *Mamora*. (*Plin.*, 5, 1.)—IV. A province of Britain, in what is now Scotland, conquered in the time of Valentinian from the Picts and Scots, and formed by Theodosius into a province. (*Amm. Marc.*, 28, 3.)—V. A city of the Edetani or Contestani, in Hispania Tarraconensis, near the mouth of the Tusa. It was taken and sacked by Pompey, but was afterward colonized and became an important place. It is now *Valencia*.—VI. or Vibo Valentia. (*Vid.* Hippo-nium.)

VALENTINIANUS, I. the first of the name, a man of moderate rank, and born at Cibalis in Hungary, was made emperor by the army, being, at the time of Jovian's death, the commander of the body-guard. He associated with himself Valens, his brother, and, after some time, Gratian, his son, who, at eight years old, was presented to the army wearing a purple robe. Valens fixing his court at Constantinople, Valentinian himself repaired to Milan. Soon after the accession of these emperors, both the West and East were disturbed nearly at the same time; the former by an irruption of the Alemanni into Gaul, the latter by the insurrection of Procopius, who, pretending a promise

VALENTINIANUS.

of Julian that he would leave him heir of the empire, was saluted Augustus by the multitude at Constantinople; and, having been joined by the legions sent against him by Valens, reduced Thrace, Bithynia, and the Hellespont. Deserted by his followers in Phrygia, he fled into the mountains, was taken alive, brought bound before Valens, and, being sentenced to be tied by the legs to two trees that were forcibly bent to the ground, was torn asunder by their recoil (A.D. 366). The Alemanni defeated the Roman armies in Gaul, killing the commanders, the counts Charisto and Severian; but were, in their turn, routed by Jovinus, the master of the horse, with the loss of six thousand slain and four thousand wounded. Valens marched against the Goths, who had assisted Procopius, and in three years reduced them to terms of peace. He also repressed the predatory incursions of the Isaurians, a sort of mountain robbers, and exacted hostages. The Picts and Scots, who had ravaged Britain, were defeated by Count Theodosius, and their spoil retaken. Valentinian crossed the Rhine, gained a bloody victory over the Alemanni, and fortified the Gallic frontier with camps and castles. The Saxons, who had burst into Gaul, were subdued by treachery. After their proposition of retiring from the country had been acceded to, they were set upon, while passing through a valley, by troops planted in ambuscade, and cut to pieces. A similar act of perfidy was committed against the Quadi, who had been irritated by the placing of an intrenched camp on their soil. Their king, Gabinius, who was invited by the Roman general Maximin to a banquet, was waylaid on his retiring, and murdered. The result was a general insurrection of the Quadi, who overran both Pannonias, and cut to pieces two entire legions. Valentinian crossing the Danube, and wasting the country of the Quadi with fire and sword, the latter sent ambassadors to sue for peace. Valentinian, preparing to answer their address, in a paroxysm of rage burst a vessel, and expired of the effusion of blood (A.D. 375). The choleric and implacable temper of Valentinian, urging him frequently to acts of the most atrocious injustice, is singularly irreconcilable with his religious moderation. It is said that he was about to issue an order for the magistrates of three towns to be put to death, because one of the judges had directed the execution of a sentence legally passed on a Hungarian, and only desisted from his purpose on the expostulation of his questor Eupraxius, who reminded the "most pious of princes" that guiltless persons, if slain, would by Christians be worshipped as martyrs. It is also related, that, on a certain count complaining to him of a civil action, he sent to execution not only the plaintiff, but the very clerks of the court who served the notice; and that the Christians of Milan gave the place of their interment the name of the "Tomb of the Innocents." That he refused to admit the challenges of judges by defendants in a cause, when preferred on the ground of private enmity, and that he condemned insolvent debtors to death, are scarcely credible charges. Not destitute of ingenuity, he invented some new weapons, and had a turn for painting and modelling. Report describes him as tall and muscular, with a florid complexion, hair of a fiery colour, and gray eyes, which had a peculiarly fierce expression from his always looking askance. The body of Valentinian was conveyed to Constantinople. In the East, another violation of that hospitality which among barbarians is held sacred, took place in the person of Para, king of Armenia. Invited by Valens to Tarsus, and detained there speciously as a guest, he escaped on horseback by night to his own kingdom, but was then inveigled to an entertainment by Duke Trajan, and, in the midst of wine and music, stabbed by a hired barbarian as he reclined on the supper-couch. Sapor, who had in vain endeavoured to bring Valens into his terms respecting Armenia,

VALENTINIANUS.

over which he desired to place a king of his own election, pressed forward with his army, but was repulsed by Trajan and Vadomair, the allied king of the Alemanni. In the mean time, a plot, having for its object to place Theodorus, a secretary and an accomplished character, on the throne, was betrayed to Valens; and the conspirators, together with Theodorus, consigned to the executioner. The plot, it is said, originated in an oracle, divulged in Asia, which predicted that one whose name began with Theo should be emperor, and this was afterward interpreted to mean Theodosius. A new enemy had now rolled its congregated numbers on the Roman world, with terror darkening in their van. The Goths were displaced by the Huns, and urged forward by the impulsion. They obtained permission of Valens to make a settlement in Thrace, and swore fealty to him, but afterward revolted under their general Frigidern. Surprised, as they were laden with spoil, by the Roman general Sebastian, they were routed, and the booty was retaken. Gratian, who had defeated another body of Goths by his general Frigidern, near Strasburg, and permitted the remnant to settle on the Po, advanced to the assistance of Valens; but the latter, eager to distinguish himself and jealous of his nephew, risked a battle with all the confederated Goths, in which the Roman army, after a brave struggle, the band of lanciers, in particular, standing firm to the last around their emperor, was put to total rout, and the field heaped with its dead. Valens taking refuge in a country-house with only a few followers, who resisted from the roof the attempt of the Goths to break the door, the latter set fire to the building, and he perished with the rest in the flames (A.D. 378). Valens was of a middle height, with legs rather bowed, somewhat corpulent, and of a high-coloured complexion. One of his eyes was obstructed by a cataract, but it was not discernible at a little distance. Ignorant of art and literature, he was but imperfectly versed in military tactics. With a sluggish and procrastinating habit of mind he united a dogmatical impatience of temper, and in the course of law, without caring for the merits of the case, was offended by any decision which counteracted his own wishes. Though bitter against those who withstood his will or differed from him in sentiment, he was not incapable of friendship.—II. Valentinian II. was proclaimed Augustus at four years old, as the colleague of Gratian, and resided with his mother, the Empress Justina, at the court of Milan. Maximus, having established himself in Britain and Gaul, drove Valentinian out of Italy. The youth stood as a suppliant before the throne of Constantinople with the empress-mother and his sister Galla. The hand of the latter became a pledge of the hospitality and aid of the enamoured Theodosius. Valentinian was thus restored, through the aid of Theodosius, to the throne of the Western empire; a throne which his weak character did not enable him to fill and defend. The new reign of this young prince was not of long duration. He removed the seat of the court to Vienna (now *Vienne*), on the Rhone, where he was assassinated, A.D. 392, by order of Arbogastes, general of the Franks, whose authority had long predominated over that of his master. This prince was a youth of excellent qualities, temperate, studious, and affectionate.—III. Valentinian III. was the son of Constantius and Placidia, daughter of Theodosius the Great. He was only six years of age when he was proclaimed Emperor of the West, A.D. 423; but he was not actually recognised as such until 425, after the defeat of John the Notary, who had seized upon the empire. Placidia, who possessed at first all the authority, governed with much wisdom. Active, worthy, by his valour and military talents, of the fairest period of the Roman republic, preserved for the empire the territory of Gaul, continually invaded by new enemies, and forced the Franks, the Goths, the Bur-

gundians, and the Alani to sue for peace. Count Boniface, however, was less fortunate in Africa, and could not prevent Genseric, king of the Vandals, from founding an empire there in 442. Valentinian was by this time of an age to govern for himself; but the only use he made of his power was to commit crimes and to disgrace himself by acts of debauchery. Aëtius subsequently (A.D. 451) gained a complete victory over Attila, in the plains of Duro-Catalaunum (*Châlons*), when Valentinian, jealous of his glory, had him sent for, and, on a sudden, stabbed him to the heart. He did not, however, long survive this cowardly act. The following year, having violated the wife of Petronius Maximus, a man of consular rank, the outraged husband slew him (A.D. 455), in the thirty-sixth year of his age and thirty-first of his reign, and then ascended his throne. (*Hetherington's History of Rome*, p. 250, *seqq.*—*Ellon's Hist. Roman Emperors*, p. 217, *seqq.*)

VALERIA LEX, I. *de Provocatione*, by P. Valerius Publicola. (*Vid.* Valerius I.) It granted to every one the liberty of appealing from the consuls to the people, and that no magistrate should be permitted to punish a Roman citizen who thus appealed. This law was afterward once and again renewed, and always by persons of the Valerian family. (*Liv.*, 2, 8.—*Dion. Hal.*, 5, 19.—*Heinsec.*, *Rom. Ant.*, p. 246, *seqq.*, *ed. Haubold.*)—II. Another, *de Debitoribus*, by L. Valerius Flaccus, consul A.U.C. 667. It enacted that debtors should be discharged on paying one fourth of their debts. (*Vell. Paterc.*, 2, 23.)—III. Another, by M. Valerius Corvinus, A.U.C. 453, which confirmed the first Valerian law enacted by Publicola.—IV. Another, called also *Horatia*, by L. Valerius and M. Horatius, the consuls, A.U.C. 304. It revived the first Valerian law, which under the triumvirate had lost its force.—V. Another, *de Magistratibus*, by P. Valerius Publicola, A.U.C. 243. It created two quaestors to take care of the public treasure, which was for the future to be kept in the temple of Saturn. (*Plut.*, *Vit. Publ.*)

VALERIANUS, PUBLIUS LICINIUS, a Roman, proclaimed emperor by the army in Rhætia, of which he was commander, A.D. 254. He had been distinguished by his virtues while in a private station, and great expectations were consequently formed of him when he ascended the throne. Having appointed his son Gallienus to be his associate in the empire, he left him to defend it against the incursions of the Goths and Germans, and marched to the east to oppose the Persian king Sapor. Valerian was defeated and taken prisoner by the Persians, who treated him with great and contemptuous cruelty. His degenerate son Gallienus made no effort to obtain his release, being apparently more satisfied to reign alone. For many years the Roman emperor bowed himself down, that his body might serve as a stepping-stone to the Persian king when he mounted on horseback: he was at last flayed alive, and his skin, stuffed in the form of a human figure and dyed with scarlet, was preserved in a temple in Persia. (*Treb. Poll.*, *Valerian. Vit.*)

VALERIUS PUBLIUS, I. a celebrated Roman, surnamed Publicola (*vid.* Publicola), and who shared with Junius Brutus the glory of having driven out the Tarquins and of founding the Roman commonwealth, B.C. 569. Brutus having fallen on the field of battle, and Collatinus, the colleague of the former, having been compelled eventually to retire from Rome in consequence of his relationship to the Tarquin family, Valerius was chosen consul along with Sp. Lucretius Tricipitinus. This last died during the earlier part of his year, and Valerius remained sole consul. As he appeared in no haste to have a new colleague, and was, at the same time, engaged in erecting a mansion on a lofty eminence, which, to the jealous vision of his countrymen, looked like a fortress against their

liberties, he was suspected of a design to make himself absolute. On being informed, however, of the dissatisfaction felt on this subject by the people, he immediately caused the edifice to be razed to the ground, took from the fasces the axe, the emblem of capital punishment, caused the same fasces to be lowered before the people at their next general assembly, and always afterward on similar occasions, and finally had the celebrated law of appeal (*lex Provocationis*) passed, which protected the rights and persons of Roman citizens against the tyranny of magistrates. (*Vid.* Valeria Lex I.) This conduct rendered Valerius the idol of the populace, and obtained for him the surname of Publicola, in allusion to his great popularity. (*Vid.* Publicola.) He was also continued in the consulship for the two succeeding years, B.C. 568 and 567. He was chosen consul anew in 504. He appears to have died not long after. The disinterestedness of this illustrious citizen was so great, that, after having been four times consul, he died a poor man, and the expenses of his funeral had to be borne by the state. The Roman matrons mourned for him a whole year. (*Liv.*, 1, 58.—*Id.*, 2, 8.—*Id.*, 3, 55.—*Id.*, 10, 9.—*Dion. Hal.*, 5, 19.—*Flor.*, 1, 9.—*Plut.*, *Vit. Public.*—*Horat.*, *Sat.*, 1, 6, 12.)—II. Corvus Corvinus, a tribune of the soldiers under Camillus. When the Roman army was challenged by one of the Senones, remarkable for his strength and stature, Valerius undertook to engage him, and obtained an easy victory by means of a crow or raven (*corvus*) that assisted him, and attacked the face of the Gaul, whence his surname of *Corvus* or *Corvinus*. Valerius triumphed over the Etrurians and the neighbouring states that made war against Rome, and was six times honoured with the consulship. He died in the 100th year of his age, admired and regretted for many private and public virtues. (*Val. Max.*, 8, 13.—*Liv.*, 7, 27.)—III. Antias, a Roman historian, who flourished about A.U.C. 670, B.C. 84. Pliny often refers to him. Aulus Gellius quotes the 12th, 24th, 45th, and 75th books of his annals. (*Aul. Gell.*, 7, 9.—*Id.*, 1, 7, &c.)—IV. Messala. (*Vid.* Messala.)—V. Maximus, a Roman writer, born at Rome during the reign of Augustus, of a patrician family. According to his own account, he served in Asia under Sextus Pompey, who was consul the year that Augustus died (2, 6, 8). On his return to Rome he abstained entirely from public affairs, and lived until the time of the conspiracy of Sejanus, A.D. 31. We have no other particulars of his life. The anonymous but ancient author of his life makes him to have been descended from the Valerian family on the father's side, and from the Fabian on the mother's side. His surname Maximus indicates the latter part of his genealogy. In a work composed originally of ten books, but of which only nine remain, and entitled *Dictorum factorumque memorabilium libri*, he has collected together the sayings and actions of individuals of various eras and nations, which he found scattered over historical works, and deemed worthy of being transmitted to posterity. The collection is dedicated to Tiberius. He classifies the individuals of whom he treats, according to some peculiar virtue or vice, of which they are cited as examples. He first confines himself to Romans, and then passes to other nations, especially the Greeks. The titles of his chapters are the work of the grammarians or copyists, as appears very clearly from the use of words which were unknown during the best age of Roman literature. Valerius displays neither judgment in his choice of anecdotes, nor skill in their arrangement, nor good taste in the use of expressions, and in the transitions which he frequently makes from the natural order of things. No one ever carried flattery to a greater extent: his preface, addressed to Tiberius, is perfectly disgusting. His manner of narrating is far from pleasing, and his style is cold, declamatory, and affected. Notwithstanding its

faults, however, the work is interesting both for the history and the study of antiquity, and contains a number of little facts taken from authors whose works have not reached us. Some critics believe, though on no very sure grounds, that the work in question is a compilation from a larger one by the same author, and was executed by C. Titus Probus or Julius Paris. Others, in like manner, ascribe it to Januarius Nepotianus. These three individuals are equally unknown.—The best editions of Valerius Maximus are, that of Vorstius, *Berol.*, 1672, 8vo; that of Torrenius, *Lugd. Bat.*, 1726, 4to; that of Kappius, *Lips.*, 1782, 8vo; and that of Hase, *Paris*, 1822, 3 vols. 8vo (including *Obsequens de Prodigis*), which last forms part of the collection of Lemaire.—VI. Flaccus, a Latin poet who flourished under Vespasian. He wrote a poem in eight books on the Argonautic expedition, but it remained unfinished on account of his premature death. The manuscripts of this poem add to the name of Valerius Flaccus that of Setinus Balbus. It has been supposed by some critics that this last was the name of a grammarian who made a revision of the text, or who, perhaps, was the possessor of a remarkable manuscript. The birthplace of the writer is also involved in some doubt. It is believed by many that his native place was Patavium, and this opinion is founded on various passages of Martial. Others suppose that he was born at Setia Campana, and allege the name Setinus in favour of this position. The latter name, however, has been explained above. There has come down to us, among the epigrams of Martial, one addressed to Valerius Flaccus, in which the former advises him to renounce poetry, and apply himself to the studies of the bar, as affording a better means for accumulating a fortune. From this some have been led to believe that his poetical talents were not held in very high esteem by his contemporaries. Quintilian, however, speaks of his death as a great loss to literature. He died A.D. 88, in the reign of Domitian. The “Argonautics” of Valerius Flaccus are in eight books, the last imperfect. Had the poem been completed, it is thought that it would have occupied ten or twelve books. It is an imitation of the work of Apollonius of Rhodes on the same subject. The critics are far from being agreed as to its merits: some rank it next to the *Æneid*; while others, who regard beauty of diction as less essential than invention, assign it a much lower rank, and give the preference to the poems of Statius, Lucan, and even Silius Italicus. In truth, the “Argonautics” are clearly deficient in originality. The principal fault of the poem is, that the enterprise of the Argonauts, which forms the chief interest of the fable, is continually lost sight of amid numerous digressions and episodes. Hence the poem wears in general a cold and monotonous appearance. It is not, however, without beauties; it contains descriptions highly poetical, and some very ingenious comparisons. It is remarkable that in the passages where Valerius does not imitate Apollonius, he is far more elegant than in those where he copies him. His style is concise and energetic, but oftentimes obscure and affected. Frequently, too, he sacrifices nature to art, and to an anxiety for displaying the stores of his erudition.—The best editions of Valerius Flaccus are, that of Burmann, *L. Bat.*, 1724, 4to; that of Harles, *Attenb.*, 1781, 8vo; that of Wagner, *Götting.*, 1806, 8vo; that of Weichert, *Mis. ap. Goed.*, 1818, 8vo; and that of Lemaire (forming part of his collection), *Paris*, 1824–5, 2 vols. 8vo. (*Schöll, Hist. Lit. Rom.*, vol. 2, p. 294, *seqq.*)

VALERIUS RUFUS, a Roman poet in the Augustan age, on whom Tibullus (4, 1, 80) passes a high eulogium (“*Valgius, æternæ propior non alter Homero*”), which, in all probability, comes rather from the warm friend than the sober critic. Horace speaks of him as one of those by whom he would wish his productions to be

commended. (*Sat.*, 1, 10, 82.) Quintilian makes no mention of him. (*Schöll, Hist. Lit. Rom.*, v. 1, p. 227.)

VANDALI, a people of Germany. The Vandals seem to have been of Gothic origin. Pliny and Procopius agree in making them such, and the latter writer more especially affirms, in express terms, that the Goths and Vandals, though distinguished by name, were the same people, agreeing in their manners, and speaking the same language. They were called Vandals from the Teutonic term *wenden*, which signifies to wander. They began to be troublesome to the Romans A.D. 160, in the reign of Aurelius and Verus: in the year 410 they made themselves masters of Spain, in conjunction with the Alani and Suevi, and received for their share what from them was termed Vandalitia, now *Andalusia*. In 429 they crossed into Africa under Genseric, who not only made himself master there of Byzacium, Gætulia, and part of Numidia, but crossed over into Italy, A.D. 455, and plundered Rome. After the death of Genseric the Vandal power declined. (*Dio Cass.*, 71, 12.—*Ætropol.*, 8, 13.—*Procop.*, B. G., 1, 2.—*Tac.*, *Germ.*, 2.—*Jornand.*, 22, 27.)

VANGIÖNES, a German tribe along the Rhine. Their capital was Augusta Vangionum, called also Borbetomagus, now Worms. (*Tac.*, *Hist.*, 4, 70.—*Id.*, *Germ.*, 28.—*Plin.*, 4, 17.)

VARDANUS or VARDANIUS, a river of Asia, called otherwise Hypanis, which rises in the central part of Caucasus, and falls into the Palus Mæotis by several mouths. It receives in its course all the water of the western branch of the Caucasian chain. The sandy plain, which extends to the north of this river, furnishes it with more. Its two principal mouths embrace the island of Taman, in which the town of *Phanagoria*, the ancient Phanagoria, attracts a little trade. The modern name *Kuben* of the river Hypanis preserves traces of the ancient appellation, since, according to the pronunciation of the dialects of the north of Asia, the *k*, uttered from the throat, becomes *k*. (*Ptol.*—*Malte-Brun, Geogr.*, vol. 2, p. 43, *Am. ed.*)

VARIUS, L. a contemporary of Virgil and Horace, and one of the best tragic poets of his time. He composed a drama entitled *Thyestes*, which, in the judgment of Quintilian, deserved to be ranked with the finest *chefs d'œuvre* of the Greeks. He also distinguished himself in the department of epic verse, and Horace places him at the head of the epic poets of his time. The *Æneid* of Virgil, however, had not yet been published. Varius sung the exploits of Augustus and his son-in-law Agrippa, so that his poem appears to have been rather historical than epic in its character. It is entirely lost. Macrobius, however, has preserved for us a few fine lines from another poem of Varius, on Death. (*Sat.*, 6, 1, 2.)—The scholiast on Horace, commonly known by the name of the Scholiast of Cruquius, accuses Varius of having stolen the tragedy referred to above from Cassius Severus of Parma, a poet of the same period, mentioned with eulogium by Horace. (*Epist.*, 1, 4, 3.) This charge has been since reiterated by several of the learned, and, among others, by Vossius (*de Poët. Lat.*, p. 23), by Geener, and Baxter, in their respective editions of Horace, and also by Burmann. Wieland, however, has shown the inaccuracy of the scholiast, who, in making his accusation, confounds Varius the poet with Quintus Attius Varius, who put Cassius to death at Athens. (*Val. Max.*, 1, 7, 7.—*Schöll, Hist. Lit. Rom.*, vol. 1, p. 211.)

VARRO, I. M. TERENTIUS, a Roman consul of ignoble origin, colleague with L. Æmilius Paulus the year in which the battle of Cannæ was fought. His rashness and presumption hastened that memorable conflict. (*Vid. Cannæ*, and Hannibal.) After the battle he retreated to Venusia, and put himself in a posture for resisting the enemy till he could receive in-

structions and re-enforcements from Rome. On his subsequent return to Rome he was honourably received, notwithstanding his defeat; and the senate returned him thanks for his undaunted aspect after defeat, and for not having despaired of the commonwealth. (*Liv.*, 22, 25, *seqq.*—*Id.*, 22, 41, *seqq.*—*Id.*, 22, 61, *seqq.*) He was afterward appointed, as proconsul, to defend Picenum, and raise levies therein; and his proconsular authority was continued to him year after year. He appears to have filled, at a later period, the office of ambassador to Philip, as well as other public employments. (*Liv.*, 23, 32.—*Id.*, 26, 6.—*Id.*, 30, 26, &c.)—II. A Latin writer, celebrated for his great learning. He is said to have written no less than 500 different volumes, which are all now lost except a treatise *de Re Rustica*, and part of another *de Lingua Latina*, dedicated to the orator Cicero. He was born in the 637th year of Rome, and was descended of an ancient senatorial family. It is probable that his youth, and even the greater part of his manhood, were spent in literary pursuits, and in the acquisition of that stupendous knowledge which has procured him the appellation of "*the most learned of the Romans*." In A.U.C. 686 he served under Pompey in his war against the pirates, in which he commanded the Greek ships. To the fortunes of that commander he continued firmly attached, and was appointed one of his lieutenants in Spain, along with Afranius and Petreius, at the commencement of the war with Cæsar. Hispania Ulterior was especially confided to his protection, and two legions were placed under his command. After the surrender of his colleagues in Hither Spain, Cæsar proceeded in person against him. Varro appears to have been little qualified to cope with such an adversary. One of the legions deserted before his own eyes; and his retreat to Cadix, where he had meant to retire, having been cut off, he surrendered at discretion with the other, in the vicinity of Corduba. From that period he despaired of the salvation of the republic, and, receiving his freedom from Cæsar, he proceeded to Dyrrhachium, to give Pompey a detail of what had passed. This latter place he left almost immediately thereafter for Rome. After his return to Italy, he withdrew from all political concerns, and indulged himself, during the remainder of his life, in the enjoyment of literary leisure. The only service which he performed for Cæsar was that of arranging the books which the dictator had himself procured, or which had been acquired by those who had preceded him in the management of public affairs. He lived, during the reign of Cæsar, in habits of the closest intimacy with Cicero. The greater part of his time was passed at the various villas which he possessed in Italy. After the assassination of Cæsar, Varro's principal villa, situate near the town of Casinum, in the territory of the Volsci, was forcibly seized by Marc Antony, along with almost all his wealth. Nor was this all. His name was also placed in the list of the proscribed, although he was at the advanced age of 70 years. His friends, however, secreted him, and he remained in a place of safety until a special edict was passed by the consul, M. Plancus, under the triumviral seal, excepting him and Messala Corvinus from the general slaughter. But, though Varro thus escaped, he was unable to save his library, which was placed in the garden of one of his villas, and fell into the hands of an illiterate soldiery. After the battle of Actium, Varro resided at Rome until his decease, which happened A.U.C. 727, when he was 90 years of age. His wealth was restored by Augustus, but his books could not be supplied. It is not improbable that the loss of his books, which impeded the prosecution of his studies, and prevented the composition of such works as may have required reference and consultation, may have induced Varro to employ the remaining part of his life in delivering those pre-

cepts of agriculture which had been the result of long experience, and which need only reminiscence to inculcate. It was some time after the loss of his books, and when he had nearly reached the age of eighty, that Varro composed the work on husbandry, as he himself testifies in the introduction. "Varro," observes Martyn, "writes more like a scholar than a man practically acquainted with agricultural pursuits." This work, together with that *de Lingua Latina*, are the only two of Varro's productions that have reached us; and the latter is incomplete. It is on account of this philological production that Aulus Gellius ranks him among the grammarians, who form a numerous and important class in the history of Latin literature. This work originally consisted of twenty-four books, and was divided into three great parts. The first six books were devoted to etymological researches. The second division, which extended from the commencement of the seventh to the end of the twelfth book, comprehended the accidents of verbs, and the different changes which they undergo from declension, conjugation, and comparison. The author admits of but two kinds of words, nouns and verbs, to which he refers all the other parts of speech. He distinguishes also two sorts of declension, of which he calls the one arbitrary, and the other natural or necessary. With the ninth book terminates the fragment we possess of Varro's treatise. The third part of the work, which contained twelve books, treated of syntax. It also contained a sort of glossary, which explained the true meaning of Latin terms. This may be considered as one of the chief works of Varro, and was certainly a laborious and ingenious production; but the author is evidently too fond of deriving words from the ancient dialects of Italy instead of recurring to the Greek, which, after the capture of Tarentum, became a great source of Latin terms. There was also a distinct treatise, *de Sermone Latino*, addressed to Marcellus, of which a very few fragments are preserved by Aulus Gellius. The critical works of Varro were also numerous, but almost nothing is known of their contents. His mythological or theological productions were much studied, and very frequently cited by the ancient fathers, particularly by St. Augustine and Lactantius. This part of his works chiefly contributed to the splendid reputation of Varro, and was extant as late as the beginning of the 14th century. Petrarch had seen it in his youth. It subsequently, however, disappeared. In history Varro was also conspicuous, and Plutarch, in his life of Romulus, speaks of him as a man of all the Romans most versed in this department of knowledge. The philosophical writings of Varro are not numerous. His chief work of this description, entitled *de Philosophia liber*, appears to have been very comprehensive. St. Augustine informs us that Varro examined in it all the various sects of philosophers, of which he enumerated upward of 280. The sect of the Old Academy was that which he himself followed, and its tenets he maintained in opposition to all others. Varro derived much notoriety from his satirical compositions. His *Tricarenus* or *Tricipitina* was a satiric history of the triumvirate of Cæsar, Pompey, and Crassus. Much pleasantry and sarcasm were also interspersed in his books, entitled *Legistorici*; but his most celebrated production in that line was the satire which he himself entitled *Menippean*. It was so called from the cynic Menippus of Gadara, who was in the habit of expressing himself jocularly upon the most grave and important subjects. The appellation of *Menippean* was given to his satires by Varro, because he imitated the philosopher's general style of humour. In its external form it appears to have been a sort of literary anomaly. Greek words and phrases were interspersed with Latin; prose was mingled with verses of various measures; and pleasantry with serious remark. Many fragments of this *Menippean* satire remain, but they are

much broken and corrupted. The heads of the different subjects or chapters contained in it, amounting to nearly 150, have been given by Fabricius in alphabetical order. Some of them are in Latin, others in Greek. Many minor productions of Varro might be also mentioned did our limits permit. A sufficient number, however, have been cited to justify the panegyric of Cicero: "His works brought us home, as it were, while we were foreigners in our own city, and wandering like strangers, so that we might know who and where we were; for in them are laid open the chronology of his country, a description of the seasons, the laws of religion, the ordinances of the priests, domestic and military occurrences, the situations of countries and places, the names of all things, divine and human, the breed of animals, moral duties, and the origin of things." (*Dunlap's Roman Literature*, vol. 2, p. 34, *seqq.*)—St. Augustine says that it cannot but be wondered how Varro, who read such a number of books, could find time to compose so many volumes; and how he who composed so many volumes could be at leisure to peruse such a variety of books, and to gain so much literary information.—The best edition of the treatise *de Re Rustica* is that contained in the *Scriptores Rei Rusticae* of Gesner, *Lips.*, 1735, 2 vols. 4to; or in the same edited by Schneider, *Lips.*, 1794-97, 7 vols. 8vo. The best editions of the treatise *de Lingua Latina* are the Bipont, 1788, 2 vols. 8vo, and that of Müller, *Lips.*, 1833, 8vo.—III. Attacinus, a poet of Attace in Gallia Narbonensis, or, as some suppose, of Narbo itself. He was born about 82 B.C., and died about 37 B.C. Varro translated freely into Latin verse the Argonautics of Apollonius Rhodius. He composed also an historical poem on Caesar's war with the Sequeni (*De Bello Sequanico*). Varro likewise appears as a writer of elegies. (*Wernsdorff, Poët. Lat. Min.*, vol. 5, pt. 3, p. 1394, *seqq.*—*Id.*, *Excurs. de Varone Attacino*, &c., p. 1385, *seqq.*—*Ruhnken, Epist. Crit.*, 2, p. 199.)

VARUS, I. QUINTILIUS, a Roman commander, belonging to a family more illustrious for achievements than antiquity of origin. His father had fought under the standard of Brutus at Philippi, and, not wishing to survive the destruction of liberty, had caused himself to be slain by one of his freedmen. The son, nevertheless, gained the favour of Augustus, who named him consul along with Tiberius, B.C. 13. He was afterward appointed proconsul of Syria, and, on the death of Herod, supported the claim of Archelaüs, the son of that monarch, to the vacant throne, and chastised severely all who resisted the authority of this prince. (*Josephus, Ant. Jud.*, 17, 9, 3.—*Flav. Joseph.*, *Vit.*, p. 6, *seqq.*, ed. *Havercamp.*)—According to Velleius Paterculus, a contemporary writer, Varus was a man of mild disposition and retiring manners (*vir ingenio mitis, moribus quietus*), but still very rapacious, who entered Syria a poor man and left it a rich one. (*Vell. Pat.*, 2, 117.) Having been subsequently appointed commander of the forces in Germany, he employed himself not so much in watching the movements of warlike communities jealous of their freedom, as in the foolish attempt to bend them to new institutions, based upon those of the Romans. A strong feeling of discontent arose, of which Arminius, a German leader, secretly took advantage to free his country from the yoke of the Romans. Varus was apprized by Segestes, king of the Catti, of the conspiracy that had been formed: "Arrest me and Arminius, together with the other leading chieftains," said this faithful ally of the Romans; "the people will not venture to attempt anything, and you yourself will have full time allowed you to distinguish between the innocent and guilty." (*Tacit., Ann.*, 1, 55.) The rash presumption of Varus led him to disregard this salutary advice. He advanced with his army into the interior of the country, where he was surprised and sur-

rounded by the foe, led on by Arminius. The Romans made a valiant resistance for three successive days, but were compelled at last to yield to numbers. Three legions were cut to pieces; and Varus, severely wounded and unwilling to survive the ignominy of defeat, slew himself. His example was followed by his principal officers: the tribunes and chief centurions were immolated as victims by the barbarians. (*Tacit., Ann.*, 1, 61.) This disastrous event took place B.C. 9.—The Romans had not experienced so severe a defeat since the overthrow of Crassus by the Parthians. Augustus was in despair, and for several months allowed his beard and hair to remain neglected, and, striking his head against the door of his apartment, frequently exclaimed, "Varus, give me back my legions." Great alarm, too, was felt by the emperor, lest the victorious Germans, uniting with other tribes on the frontiers, should make a descent upon Italy; and an extraordinary levy was therefore made to meet the emergency. The scene of the defeat of Varus was the Teutoburgiensi Saltus, lying in an eastern direction from the modern Paderborn, and reaching as far as the territory of Osnabrück. (*Suet.*, *Vit. Aug.*, 23, 49.—*Id.*, *Vit. Tib.*, 17, *seq.*—*Tacit., Ann.*, 1, 3, &c.—*Id.*, *Hist.*, 4, 17.—*Id.*, *ib.*, 5, 9.—*Dio Cass.*, 56, 23.) The remains of the vanquished, that lay whitening the ground, were interred six years after by the victorious Germanicus. (*Tacit., Ann.*, 1, 61, *seq.*)—II. Quintilius, an acute and rigid critic, mentioned by Horace in his Epistle to the Pisces (v. 437), and whose death is mourned by the same poet in one of his odes (1, 24). St. Jerome calls him a native of Cremona (*Chron. Euseb.*—Olymp. 189.1, B.C. 24). Heyne, however, doubts the propriety of giving him the surname of Varus. (*Excurs.*, 2, ad *Virg.*, *Ecol.*)—III. Lucius, an Epicurean, and a friend of Julius Cæsar. He is mentioned by Quintilian (6, 3, 78).—IV. A tragic poet, mentioned by Ovid (*Ep. ex. Pont.*, 4, 16, 31).—V. Alfenus, a barber of Cremona, who, growing out of conceit with his profession, quitted it and came to Rome, where, attending the lectures of Servius Sulpicius, a celebrated lawyer, he made so great proficiency in his studies as to become eventually the ablest lawyer of his time. His name often occurs in the Pandects. (*Hor.*, *Sat.*, 1, 3, 130).—VI. A river which falls into the Mediterranean, to the west of Nicæa or Nice. The modern name of the Varus is the Var. At a somewhat late period it formed the western limit of Italy, which in the time of Augustus had been marked by the stone trophy of that emperor placed on the Maritime Alps. (*Cramer's Anc. Italy*, vol. 1, p. 2, *not.*)

VASCONES, a people of Spain, between the Iberus and the Pyrenees, in what is now the kingdom of Navarre: their chief town was Pompelo, now Pampeluna. (*Pliny*, 3, 3.)

VATICANUS, Mons, a hill at Rome, forming the prolongation of the Janiculum towards the north, and supposed to derive its name from the Latin word *vates* ("a soothsayer") or *vaticinium* ("divination"), as it was once the seat of Etruscan divination. (*Festus*, s. v. *Vaticanus*.) The Campus Vaticanus included all the space between the foot of this range and the Tiber. According to Tacitus, the air of this part of Rome was considered very unwholesome. (*Hist.*, 2, 93.) Here Caligula erected a Circus, in which he placed the great Egyptian obelisk that now stands in front of St. Peter's. (*Barton's Antiquities of Rome*, p. 232.) The ground now covered by St. Peter's, the papal palace, museum, and gardens, was anciently designated by *Vaticani loci*, "places belonging to the Vatican Hill." (*Tacit., Hist.*, l. c.—*Martial*, 3, 68.—*Burges, Antiquities of Rome*, vol. 2, p. 256.)

VATINIA LEX, *de Provinciis*, by the tribune P. Vatinius, A.U.C. 694. It appointed Cæsar governor of Gallia Cisalpina and Illyricum for five years, with the

command of three legions. (Vid. *Cæsar*, page 262, towards the end of the first column.)

VATINIUS, I. a Roman of most impure life. Having been brought forward on one occasion as a witness against an individual whom Cicero was defending, the orator inveighed against him with so much bitterness of reproach, and excited so much odium against him by the picture which he drew of his vices, that *odium Vatiniæ* became proverbial for bitter and implacable hatred. (Compare *Seneca, de Constant. Sap.*, 17.)—II. A shoemaker of Beneventum, deformed in body, and addicted to scurrilous invective against the members of the higher class. He lived in the reign of Nero, and exhibited a show of gladiators when that emperor passed through Beneventum. He is said to have invented a peculiar species of cup, called after his name. (*Tacit., Ann.*, 15, 34.—*Marzial*, 14, 96.)

UBII, a people of Germany, near the Rhine, transported across the river by Agrippa. Their chief town, Ubiorum oppidum, or Ara, called after this Agrippina Colonia, from the circumstance of Agrippina (the daughter of Germanicus, and mother of Nero) having been born there, is now *Cologne* or *Köln*. (*Tacit., G.*, 28; *Ann.*, 12, 27.—*Plin.*, 4, 17.—*Cæsar*, 4, 30.)

VECTIS INSULA, the *Isle of Wight*, south of Britain. (*Suet., Vit. Vesp.*, 4.—*Plin.*, 3, 4.)

VEGETIUS, a Latin writer, who flourished A.D. 386, in the reign of the Emperor Valentinian, to whom he dedicated his treatise *de Re Militari*. Although probably a military man, his Latinity is pure for the age in which he lived. Modern critics distinguish between this writer and Vegetius who composed a treatise on the veterinary art. The best edition of *Vegetius, de Re Militari*, is that of Stewechius, *Vesal*, 1670, 12mo. The best edition of the work of the other Vegetius, on the veterinary art, is that by Gesner, in the writer's *de Re Rustica*.

VEIENTES, the inhabitants of Veii. (Vid. *Veii*.)

VEII, a powerful city of Etruria, at the distance of about twelve miles from Rome. It sustained many long wars against the Romans, and was at last taken and destroyed by Camillus, after a siege of ten years. At the time of its destruction Veii was larger and far more magnificent than the city of Rome. Its situation was so eligible that the Romans, after the burning of their own city by the Gauls, were inclined to migrate thither, and totally abandon their native home; and this would have been carried into execution if not opposed by the authority and eloquence of Camillus. (*Ovid, Fast.*, 2, 195.—*Cic., de Div.*, 1, 44.—*Horat., Sat.*, 2, 3, 143.—*Liv.*, 5, 21.) The site of ancient Veii answers to the spot known by the name of *Pinsola Farnese*, and situated about a mile and a half to the northeast of the modern posthouse of *la Storta*. The numerous remains of antiquity found there very recently have placed this fact beyond dispute.—After the capture of Rome by the Gauls, and the attempt made to transfer the seat of Roman power to Veii, we scarcely hear of the latter city. We collect only from a passage in Frontinus (*de Col.*) that Veii became a Roman colony under Julius Cæsar, who divided its lands among his soldiers, but in the civil wars which ensued after his death it was nearly destroyed, and left in a most desolate state, a fact which is confirmed by Lucan (7, 392) and Propertius (4, 10, 27). It is certain, however, that Veii again rose from its ruins, and was raised to municipal rank, probably under Tiberius, whose statue, with several other monuments relating to his reign, were discovered on the site of the city. It existed in the time of Pliny (3, 5), and even much later, under the emperors Constantine and Theodosia. (*Cramer's Anc. Italy*, vol. 1, p. 236, seq.)

VEJÓVIS or **VEDIUS**, an Etruscan divinity worshipped at Rome. He was believed to cast lightnings, and these had the property of causing previous deafness in those whom they were to strike. (*Ann.*

Marcell., 17, 10, 2.) The temple of Vejovis at Rome stood in the hollow between the Arx and the Capitol ("inter duos lucos."—*Ovid, Fast.*, 3, 430). His statue was that of a youth with darts in his hand; a she-goat stood beside it, and a she-goat was the victim to him. (*Ovid, l. c.*—*Aul. Gell.*, 5, 12.) Hence some viewed him as Young Jupiter, while others saw in him the avenging Apollo of the Greeks. (*Ovid, l. c.*—*Aul. Gell., l. c.*) He was, however, certainly a god of the under-world. (*Mart., Capell.*, 2, 9.—*Id.*, 2, 7.—*Macrob., Sat.*, 3, 9.) His name is said to have signified "*Injurious God*." (*Aul. Gell., l. c.*—*Keightley's Mythology*, p. 531.)

VELABRUM, a name generally applied to all the ground lying on the left bank of the Tiber, between the base of the Capitol and the Aventine. According to Varro, the term was derived from the Latin verb *velare*, because this part was originally swampy and subject to floods, when it was necessary to employ boats to pass from one hill to the other (*L. L.*, 4, 4). We find the name subsequently restricted to two streets, distinguished from each other by the titles of *Velabrum Majus* and *Minus*. Nardini conceives that they ran parallel to each other from the Circus Maximus to the foot of the Capitol, intersecting the *Vicus Tuscus*, the *Vicus Jugarius*, and the other streets which led from the forum to the Tiber. In this quarter were the shops of the oil-venders, &c. (*Horat., Sat.*, 2, 3, 229.—*Cramer's Anc. Italy*, vol. 1, p. 419, seq.)

VELIA, a city of Lucania, on the coast of the Mare Tyrrhenum, between the promontories of Palinurus and Posidium, and situate about three miles from the left bank of the river Heles or Elees. It was founded by the Phocæans after their abandonment of Alalia in Corsica. (Vid. *Phocæa*.) The Phocæans called the town *Hyle* (Ἰλῆ), which the Latins afterward changed to *Velia*. Strabo asserts, that in his time the city was called *Elea* (Ἠλέα), and so Stephanus Byzantinus gives the form of the name. The more correct mode of writing the word, however, is *Helia*, which the Latins, employing the Æolic digamma for the asperate, enunciated by *Velia*. (Compare *Plin.*, 3, 5: "*Oppidum Helia, quæ nunc Velia*.")—Strabo informs us, that from the constitution adopted by its founders being so excellent a one, the new colony was enabled to resist with success the aggressions both of the Posidonians and the Lucani, though very inferior to these adversaries both in population and fertility of soil. (*Strab.*, 252.) *Velia* is particularly celebrated in the annals of Grecian science for the school of philosophy which was formed within its walls, under the auspices of Zeno and Parmenides, and which is commonly known by the name of the Eleatic sect. This sect was afterward transplanted into Greece, where it degenerated into a school of sophistry and false dialectic. (*Bruckner, Hist. Phil.*, vol. 1, p. 1142.)—Scylax leads us to infer that *Velia* afterward received a colony of Thuriens, an event which we may suppose to have occurred about 440 A.C. (*Scylax, Periplus*, p. 4.) When the Romans formed the design of erecting a temple to Ceres, they sought a priestess from *Velia*, where that goddess was held in great veneration, to instruct them in the rites and ceremonies to be observed in her worship. (*Cic., pro Balb.*, 24.—*Val. Max.*, 1, 1.)—This place became subsequently a Roman maritime colony, as may be inferred from *Livy*; but the period at which this change in its condition took place is not mentioned; it was probably not long after the colonization of *Pæstum*. Mention of *Velia* frequently occurs in the letters of Cicero, who occasionally resided there with his friends Trebatius and Tullia. (*Ep. ad Fam.*, 7, 20; *ad Att.*, 16, 7.) The situation of the town seems to have been considered very healthy; as Plutarch says that *Paulus Æmilius* was ordered there by his physicians, and that he derived considerable

benefit from the air. Horace was also recommended to visit Velia for a disorder in his eyes. (*Ep.* 1, 15.) In Strabo's time this ancient town was greatly reduced, its inhabitants being forced, from the poorness of their soil, to betake themselves to fishing and other seafaring occupations.—The ruins of Velia stand about half a mile from the sea, on the site now called *Castellamare della Bruca*. (*Cramer's Anc. Italy*, vol. 2, p. 370.)

VELINA, the name of one of the Roman tribes, deriving its appellation, as is said, from the lake Velinus in the Sabine territory. It was added to the other tribes, together with the one termed *Quirina*, A.U.C. 513.—The locality of this tribe was in the vicinity of Mount Palatine. (*Horat.*, *Ep.* 1, 8, 52.)

VELINUS, a river in the Sabine territory, rising in the Apennines and falling into the Nar. It occasionally overflowed its banks, and formed some small lakes before it entered the Nar. One of the lakes, and the chief of the number, was called the Lacus Velinus, now *Lago di Piè di Lugo*. The drainage of the stagnant waters produced by the occasional overflow of the lakes and of the river was first attempted by Curius Dentatus, the conqueror of the Sabines. He caused a channel to be made for the Velinus, through which the waters of that river were carried into the Nar, over a precipice of several hundred feet. This is the celebrated fall of *Terni*, known in Italy by the name of *Caduta delle Marmore*. The Velinus is now the *Velino*. (*Cramer's Anc. Italy*, vol. 1, p. 316.)

VELITRÆ, an ancient town of Latium, southeast of Aricia, and on the road between Rome and Tarracina. It was always reckoned one of the most important and considerable cities of the Volsci. The inhabitants were engaged in frequent hostilities with the Romans, and revolted so often that it became necessary to punish them with unusual severity. The walls of their town were razed, and its senators were removed to Rome, and compelled to reside in the Transtiberine part of the city; a severe fine being imposed upon any individual of their number who should be found on the other side of the river. (*Liv.* 8, 14.) The colony, however, planted by the Romans at Velitræ still subsisted in the reign of Claudius, as mention is made of it at that period. (*Front.*, *de Col.*) Its chief boast was the honour of having given birth to Augustus. Suetonius states, that the house in which he was said to have been born was still shown in his time near Velitræ. (*Vit. Aug.*, 6.) The modern name of this place is *Velitri*. (*Cramer's Anc. Italy*, vol. 1, p. 83.)

VELLAUNODUNUM, a city of the Senones, between Agedicum and Genabum. According to D'Anville, the modern *Beaune (en Gâtinois)* answers to the ancient place. Lemaire, however, thinks the opinion of Goduin preferable, who makes Genabum to have been situate near *Scènevière*, in the neighbourhood of which some traces of a ruined city still exist. (*Cæs.*, *B. G.*, 7, 11.—*Lemaire, Index Geogr.*, *ad Cæs.*, p. 395.)

VELLËDA, a female of ancient Germany, belonging to the tribe of the Bructeri. She was believed to be gifted with prophetic powers, and exercised, in consequence, very great influence over the minds of her countrymen, who ascribed to her a species of divine character. Tacitus first makes mention of her in B.C. 71, the era of Vespasian. (*Hist.*, 4, 61.—*Compare Hist.*, 4, 65.—*Germ.*, 8.) From Statius it appears that she was subsequently made captive by the Romans. (*Sylv.* 1, 4, 89.) The more correct form of the name, and the one more nearly approaching the German, is *Welda*. (*Lips.*, *ad Tacit.*, *Germ.*, 8.—*Oberlin.*, *ad loc.*) Dio Cassius writes the name, in Greek, *Βελήδα*, which fixes the quantity of the penult. (*Dio Cass.*, *fragm.*, xlix., 67, 5.)

VELLEIUS PATERCULUS, a Roman historian, descended from an equestrian family of Campania. The year of his birth is commonly fixed at 19 B.C., the

same year in which Virgil died. We have a very few particulars respecting his life, and these we obtain from the writer himself; for, what is very singular, no other ancient author makes mention of him, excepting perhaps Priscian, who cites a Marcus Velleius, and Tacitus (*Ann.*, 3, 39), who speaks of Publius Velleius as commander of an army in Thræce. In his youth Paterculus traversed, along with Caius Cæsar, a part of the East. Augustus named him, at the age of twenty years, a prefect of horse; and in this capacity, and afterward as quæstor and lieutenant, he accompanied Tiberius on his campaigns in Germany, Pannonia, and Dalmatia, and was thus, for the space of nineteen years, his companion in arms and the witness of his exploits. He returned to Rome with Tiberius, and held the office of prætor the year that Augustus died. Sixteen years after, during the consulship of M. Vincius, he composed or else completed his historical work. The following year, A.D. 31, he was involved in the disgrace of Sejanus, who had been his patron, and was put to death along with the other friends of that aspiring minister.—The work of Paterculus is entitled *Historia Romana*, but it is possible that this appellation may be owing to the copyists. A single manuscript of the work was preserved at the convent of *Murbach* in *Alsace*, where Beatus Rhenanus found it. This manuscript, which was in a very bad condition, was subsequently lost. Its place is supplied by the edition of Rhenanus, published in 1520, and by a collation of the manuscript, made by Burer before Rhenanus returned it to the convent from which he had borrowed it. This collation is added to the edition of 1546.—The beginning of the work is lost, so that we are ignorant of the plan which the author had proposed to himself to follow. It would seem, however, that he had intended to give a summary of Universal History, containing, in particular, what might prove interesting to the Romans. In the first fragment he treats of Greece, the Assyrian empire, and the kingdom of Macedonia; after this there is a lacuna, embracing the first 562 years of Rome. The remainder of the first book, and the second, which we have entire, or with the loss, perhaps, of only a few lines, give the history of Rome down to A.D. 30.—The history of Paterculus does not enter into details. It is a general picture of the times rather than a narrative of individual events. The historian states merely results, and is silent respecting the causes which combined to produce them. He loves, however, to develop and draw the characters of the principal actors, and his work is filled with delineations traced by the hand of a master. We find in him, also, a great many political and moral observations, the fruit of experience and foreign travel. In his style he imitates the concise and energetic manner of Salust. His diction is pure and elegant, without, however, being wholly free from affectation, which shows itself in the search for archaisms or antiquated forms of expression, and in the too frequent use of moral sentences and figures of rhetoric. Some Hellenisms are also found in him. The charge of adulation to his prince, which is so often brought against this historian, may find some palliation in the fact that it was not until after the death of Sejanus that the tyrannical spirit of Tiberius began openly and fully to develop itself; and of this, if Velleius were involved in the fate of Sejanus, he could not, of course, have been a witness. Besides, Tiberius had been the military chief and the benefactor of Paterculus. The latter praises the good deeds he performed; he exaggerates his merit; he treats with indulgence his faults; but he does not push flattery so far as blindly to alter the truth, or assert things that are false. It is unjust, therefore, on account of this venial failing, to rank Paterculus among historians who are undeserving of confidence. He is impartial in the recital of events of which he

was not himself a witness. As for those which passed under his own eyes, where is the historian who, in writing the history of his own times, is wholly exempt from the charge of partiality?—The best editions of Paterculus are, that of Burmann, *Lugd. Bat.*, 1744, 2 vols. 8vo; that of Ruhnken, 1779, *L. Bat.*, 2 vols. 8vo; that of Krause, *Lips.*, 1800, 8vo; and that of Lemaire, *Paris*, 1822, 8vo, which last is, for the most part, a republication of Ruhnken's. (*Schöll, Hist. Lit. Rom.*, vol. 2, p. 357.)

VELOCASSES or BELOCASSES, a people of Gallia Belgica, along the northern bank of the Sequana, west of the Bellovacii, and north of the Auterli Eburonices. Their capital was Rotomagus, now *Rouen*. (*Cæs.*, *B. G.*, 7, 75.—*Plin.*, 4, 18.)

VENAFRUM, a city of Campania, in the northeast angle of the country, and near the river Volturnus. (*Strabo*, 258.) It is much celebrated in antiquity for the excellence of the oil which its territory produced. (*Horat.*, *Od.*, 2, 6, 16.—*Id.*, *Sat.*, 2, 4, 68.—*Mart.*, 13, 98.—*Cato, R. R.*, 135.—*Plin.*, 16, 2.)

VENEDI or VENEDJE, a German tribe, on the eastern bank of the Vistula, near its mouth. They gave name to the Venedicus Sinus, off this coast, and to the Montes Venedici, or the low range of mountains between *East Prussia* and *Poland*. (*Tac.*, *Germ.*, 49.—*Plin.*, 4, 27.)

VENETI, I. a people of Italy, in Cisalpine Gaul, near the mouths of the Po, fabled to have come from Paphlagonia, under the guidance of Antenor, after the Trojan war. (*Vid. Heneti*.) On the invasion of Italy in the fifth century by the Huns, under their king Attila, and the general desolation that everywhere appeared, great numbers of the people who lived near the Adriatic took shelter in the islands in this quarter, where now stands the city of Venice. These islands had previously, in A.D. 421, been built upon by the inhabitants of Patavium for the purposes of commerce. The arrival of fresh hordes of barbarians in Italy increased their population, until a commercial state was formed, which gradually rose to power and opulence.

—As regards the origin of the ancient Veneti, the tradition which makes them of Paphlagonian origin is, as we have already remarked, purely fabulous. Mannert, on the other hand, has started a learned and plausible theory, in which he maintains, with great ability, their Northern origin. According to this writer, they were a branch of the great Slavonic race. His grounds for this opinion are, 1, the fact of the Veneti being not an aboriginal people of Italy; 2, the analogy of their name with that of the Vandals, both being derived from the old Teutonic word *wenden*, and denoting a roving and unsteady mode of life; and, 3, from the existence of the amber-trade among them, and the proof which this furnishes of a communication by an overland trade between them and the nations inhabiting the shores of the Baltic and the countries of the north. (*Mannert, Geogr.*, vol. 10, p. 54, *seqq.*)—The history of the Veneti contains little that is worthy of notice, if we except the remarkable feature of their being the sole people of Italy who not only offered no resistance to the ambitious projects of Rome, but even, at a very early period, rendered that power an essential service; if it be true, as Polybius reports, that the Gauls who had taken Rome were suddenly called away from that city by an irruption of the Veneti into their territory (2, 18). The same author elsewhere expressly states that an alliance was afterward formed between the Romans and Veneti (2, 23), a fact which is confirmed by Strabo (216).—This state of security and peace would seem to have been very favourable to the prosperity of the Venetian nation. According to an old geographer, they counted within their territory fifty cities, and a population of a million and a half. The soil and climate were excellent, and their cattle were reported to breed twice

1378

in the year. Their horses were especially noted for their fleetness, and are known to have often gained prizes in the games of Greece. (*Eurip.*, *Hipp.*, v. 231, *et Schol.*, *ad loc.*—*Hesych.*, s. v. *Everider*.) And Strabo affirms that Dionysius, tyrant of Sicily, kept a stud of race-horses in their country. (*Strab.*, 212.) The same writer asserts, that even in his day there was an annual sacrifice of a white horse to Diomed. When the Gauls had been subjugated, and their country had been reduced to a state of dependance, the Veneti do not appear to have manifested any unwillingness to constitute part of the new province, an event which we may suppose to have happened not long after the second Punic war. Their territory from that time was included under the general denomination of Cisalpine Gaul, and they were admitted to all the privileges which that province successively obtained. In the reign of Augustus Venetia was considered as a separate district, constituting the tenth region in the division made by that emperor. (*Plin.*, 3, 18.) Its boundaries, if, for the sake of amplification, we include within them the Tridentini, Meduaci, Carni, and other smaller nations, may be considered to be the Athesis, and a line drawn from that river to the Padus, to the west; the Alps to the north; the Adriatic, as far as the river Formio (*Risano*), to the east; and the main branch of the Padus to the south. (*Cramer's Anc. Italy*, vol. 1, p. 112.)—II. A nation of Gaul, at the south of Armorica, on the western coast, powerful by sea. Their chief city is now called *Vannes*. (*Cæs.*, *B. G.*, 3, 8.)

VENETIA, the country of the Veneti, in Gallia Cisalpina. (*Vid. remarks at the end of the article Veneti I.*)

VENETUS LACUS, the same with the Lacus Brigantinus, or Lake of *Constance*. (*Mela*, 3, 2.)

VENILIA, a nymph, sister to Amata, and mother of Tarnus by Daunus. (*Virg.*, *Æn.*, 10, 78.—*Ovid, Met.*, 14, 334.—*Varro, L. L.*, 4, 10.)

VENTA, I. BELGARUM, a town of Britain, now *Winchester*.—II. SILURUM, a town of Britain, now *Caeiro*, in Monmouthshire.—III. ICENORUM, now *Caster*, south of Norwich, according to Mannert; but Reichard is in favour of *Lyynn*.

VENTIDIUS BASSUS, a native of Picenum, was brought captive to Rome, while yet an infant, along with his mother. When he had grown up, he followed for some time the humble employment of hiring out horses and mules. He afterward accompanied Cæsar to Gaul, and, by his punctual discharge of the various tasks confided to him, rose so high in Cæsar's favour that the latter bestowed upon him several important stations. After Cæsar's death he attached himself to Antony, to whose aid he brought three legions at Mutina. He subsequently obtained the consulship, an elevation which exposed him to many assassinations. Antony sent him afterward against the Parthians, whom he defeated in three battles, B.C. 39, and was the first Roman honoured with a triumph over this formidable enemy. (*Appian, Bell. Civ.*, 3, 66, *seqq.*—*Id.*, *Bell. Parth.*, 71, *seqq.*)

VENUS, a Roman or Latin deity, generally regarded as identical with the Græek Aphrodite (*Ἀφροδίτη*), though perhaps with but little correctness. The Aphrodite of the *Iliad* is the daughter of Jupiter and Dione, and by the Alexandrian and the Latin poets she is sometimes called by the same name as her mother. (*Theocr.*, 7, 116.—*Bion*, 1, 93.—*Ovid, A. A.*, 3, 3, 769.—*Id.*, *Fast.*, 2, 461.—*Stat.*, *Sylv.*, 3, 7, 2.) Hesiod says that she sprang from the foam (*ἀπὸ φόβου*) of the sea, into which the mutilated part of Uranus had been thrown by his son Saturn. She first, he adds, approached the land at the island of Cythere, and thence proceeded to Cyprus, where grass grew beneath her feet, and Love and Desire attended her. (*Hes.*, *Theog.*, 188, *seqq.*) One of the Homerids sings

(*Hymn.*, 6), that the moist-blowing west-wind wafted her in soft foam along the waves of the sea, and that the gold-filleted Seasons received her on the shore of Cyprus, clothed her in immortal garments, placed a golden wreath on her head, rings of orichalcum and gold in her pierced ears, and golden chains about her neck, and then led her to the assembly of the immortals, every one of whom admired, saluted, and loved her, and each god desired her for his spouse. The husband assigned to this charming goddess is usually the lame artist Vulcan or Hephestus, but her legend is also interwoven with those of Mars, Adonis, and Anchises.—According to Homer, Aphrodite had an embroidered girdle (*κεστός ῥαυή*), which possessed the power of inspiring love and desire for the person who wore it; and Juno, on one occasion, borrowed the magic girdle from the goddess, in order to try its influence upon Jove. (*Il.*, 14, 214.)—The animals sacred to Aphrodite were swans, doves, and sparrows. Horace places her in a chariot drawn by swans (*Od.*, 3, 28, 15.—*Ib.*, 4, 1, 10), and Sappho in one whose team were sparrows. The bird called lynx or *Fritillus*, of which so much use was made in amatory magic, was also sacred to this goddess, as was likewise the swallow, the herald of spring. Her favourite plants were the rose and the myrtle. She was chiefly worshipped at Cythera and Cyprus, in which latter island her favourite places were Paphos, Golgi, Idalion, and Amathus; and also at Cnidus, Miletus, Cos, Corinth, Athens, Sparta, &c. In the more ancient temples of this goddess in Cyprus, she was represented under the form of a rude conical stone. But the Grecian sculptors and painters, particularly Praxiteles and Apelles, vied with each other in forming her image the ideal of female beauty and attraction. She appears sometimes rising out of the sea and wringing her locks; sometimes drawn in a coach by Tritons, or riding on some marine animal. She is usually nude, or but slightly clad. The Venus de' Medici remains to us a noble specimen of ancient art and perception of the beautiful.—There is none of the Olympians of whom the foreign origin is so probable as this goddess, and she is generally regarded as being the same with the Astarte of the Phœnicians: the tale of Adonis, indeed, sufficiently proves the identification of this last-mentioned goddess with the Aphrodite of the Greeks; and yet, at the same time, the name of the latter (if we reject the common Greek derivation) appears singularly connected with the mythology of Scandinavia; for there one of the names of the goddess of love is *Frida*, and we see the same root lurking in *ἀφροδίτη*. (Compare the English name *Friday*, the “dies Veneris.”)—When we turn to the Roman Venus, we find her so thoroughly confounded with the Grecian Aphrodite, that almost everything peculiar to her has disappeared. And yet Venus cannot have been one of the original deities of Rome, as her name did not occur in the Sælian hymns, and we are assured that she was unknown in the time of the kings. (*Macrob.*, *Sat.*, 1, 13.) She seems to have been a deity presiding over birth and growth in general, for, as Venus Hortensia, she was the goddess of gardens. She was held to be the same as Libitina, the goddess of funerals, because, says Plutarch (*Quæst. Rom.*, 23), the one and the same goddess superintended birth and death.—There was at Rome a temple of Venus Frutis (*Festus*, s. v. *Frutinalis*), which latter term seems to be merely a corruption of Aphrodite. It may, however, be connected with *fructus*, and refer to her rural character. Perhaps it may form a presumption in favour of the original rural character of Venus, that, like Pales, her name is of both genders. Thus we meet with *Deus* and *Dea* Venus; and with Venus *almus* and Venus *alma*. (*Keightley's Mythology*, p. 515, *seqq.*)

VENUSIA, a city of Apulia, on the great Appian Way, leading to Tarentum, and about fifteen miles to

the south of Aufidus. This place appears to have been a Roman colony of some importance before the war against Pyrrhus. (*Dion. Hal.*, *Excerpt. Leg.*—*Val. Pat.*, 1, 14.) After the disaster at Cannæ it afforded a retreat to the consul Varro and the handful of men who escaped from that bloody field. The services rendered by the Venusini on that occasion obtained for them afterward the special thanks of the Roman senate. (*Liv.*, 22, 54.—*Id.*, 27, 10.) Venusia deserves our attention still more, from the associations which connect it with the name of Horace, who was born there A.U.C. 688. We may infer from Strabo (250), that this town was in a flourishing state in his day. Mention of it is also made by Cicero (*Ep. ad Att.*, 5, 5), Appian (*Bell. Civ.*, 1, 39), Pliny (3, 11), and others. The modern *Venosa* occupies the ancient site. (*Cramer's Ancient Italy*, vol. 2, p. 288, *seqq.*)

VERIENI, an Alpine tribe, living among the Graian and Pennine Alps. Cellarius, however, reckons them as belonging to Gallia Narbonensis. (*Plin.*, 3, 20.)

VERBANUS LAQUS, now *Lago Maggiore*, a lake of Gallia Cisalpina, through which flows the river Ticinus. The *Lago Maggiore* lies partly in Switzerland, but principally in Italy. It is twenty-seven miles long, and, on an average, eight broad. It contains the Borromean islands, which are the admiration of every traveller. (*Plin.*, 3, 19.—*Strab.*, 209.)

VERCELLÆ, a city of Gallia Cisalpina, to the north-west of Ticinum, and the capital of the Libicii. It was situate on the river Sesia, now *la Sesia*, and its site corresponds with that of the modern *Borge Vercelli*. Tacitus styles this place a municipium (*Hist.*, 1, 70), and Strabo mentions some gold mines in the neighbourhood, near a place called Ictymnorum Vicus. (*Strab.*, 218.) Ammianus Marcellinus writes the name Vercellum. (*Cramer's Anc. Italy*, vol. 1, p. 47.)

VERCINGETORIX, a young nobleman of the Arverni, distinguished for his abilities, and for his enmity to the Romans. He was chosen commander-in-chief of the confederate army raised by the states of Gaul, when the great insurrection broke out in that country against the Roman power; and he used every endeavour to free his native land from the Roman yoke. His efforts, however, were unsuccessful; he was besieged in Alesia, compelled to surrender, and, after being led in triumph to Rome, was put to death in prison. (*Cæs.*, *B. G.*, 7, 4, *seqq.*—*Dio Cæs.*, 40, 41.) The name Vercingetorix appears to be nothing more than a title of command. *Ver-cin-cido-rix*, “great captain” or “generalissimo.” (*Thierry, Hist. des Gaulois*, vol. 3, p. 97.)

VERCELLUS, a small river near Cannæ, falling into the Aufidus. It is said to have been choked with the dead bodies of the Romans on the day of their disastrous overthrow. (*Flor.*, 2, 6.—*Val. Max.*, 9, 2.)

VEREILÆ, a name given to the Pleiades from their rising in the spring (*vere*).—*Vid. Pleiades*.

VERGEBREITH, a term used among the ancient Gauls as a judicial appellation, and a title of office, *Verg-breith*, “a man for judging,” or “a judge.” (*Cæs.*, *B. G.*, 1, 16.—*Thierry, Hist. des Gaulois*, vol. 2, p. 115.)

VEROMANDUI, a people of Gallia Belgica Secunda, below the Nervii and Atrebatæ. Their capital was Augusta Veromanduorum, now *St. Quentin*. (*Cæs.*, *B. G.*, 2, 4.—*Plin.*, 4, 17.)

VERONA, a city of Gallia Cisalpina, in the territory of the Cenomanni, and situate on the river Athesia, in an eastern direction from the southern extremity of the Lacus Benacus. The modern name is the same with the ancient. The history of its foundation is somewhat uncertain, for Pliny (3, 19) ascribes it to the Rheti and Euganei, while Livy as positively attributes it to the Cenomanni (5, 36). It will be easy to

reconcile these two opinions by admitting that the Cenomanni made this settlement in the territory previously possessed by the Rheti and Euganei. Under the dominion of the Romans it soon became a large and flourishing city. (*Strab.*, 212.) It is supposed to have been colonized by Pompeius Strabo. Tacitus speaks of it in later times as a most opulent and important colony, the possession of which enabled Vespasian's party to begin offensive operations against the forces of Vitellius, and to strike a decisive blow. (*Tacit.*, *Hist.*, 3, 8.) The celebrity of Verona is still farther established as being the birthplace of Catullus (*Ov.*, *Am.*, 3, 14.—*Martial*, 14, 193) and of Pliny the naturalist, who, in his preface, calls himself the countryman of Catullus. It was in the neighbourhood of Verona that the famous Rhetic wine, so highly commended by Virgil, was grown. (*Georg.*, 2, 94.—*Cramer's Anc. Italy*, vol. 1, p. 70.)

VERRES, C., a Roman who governed the province of Sicily as praetor. The oppression and rapine of which he was guilty while in office were of the most flagrant description, and he was accused by the Sicilians of extortion on the expiration of his office. Cicero managed the prosecution, Hortensius appeared for the defence. Of Cicero's six orations against Verres that have come down to us, only one was pronounced. Driven to despair by the depositions of the witnesses after the first oration, he submitted, without awaiting his sentence, to a voluntary exile. The other five orations of Cicero, forming the series of harangues which he intended to deliver after the proof was completed, were subsequently published in the same shape as if Verres had actually stood his trial, and had made a regular defence. He perished afterward in the proscription of Antony, whom he had offended by refusing to share with him his Corinthian vases. Verres appears during his exile to have lived in great affluence on his ill-gotten gains. (*Cic. in Verr.*)

VERRIUS FLACCUS, a freedman and grammarian, famous for his powers in instructing. He was appointed tutor to the grandchildren of Augustus, and also distinguished himself by his writings, which were historical and grammatical. Suetonius also informs us that he caused to be incrustated on a semicircular building at Praeneste twelve tablets of marble, on which was cut a Roman calendar, which Suetonius and Macrobius often cite. Four of these tablets, or, rather, fragments of them, were discovered in 1770, and published by Foggini in 1779. They contain the months of January, March, April, and December, and throw great light on the *Fasts* of Ovid. Verrius Flaccus was at the head of a celebrated school of grammarians. His principal work in this line was entitled *de Verborum Significatione*. It was abridged by Festus, a grammarian of the fourth century. The abridgment has reached us, but the original work is lost. (*Vid. Festus*.—*Aul. Gell.*, 4, 5.—*Sueton.*, *Illustr. Gram.*, 17.)

VERTUMNUS or VORTUMNUS, a deity among the Romans. According to some, he was, like Mercury, a deity presiding over merchandise. (*Ascon. ad Cic. in Verr.*, 2, 1, 59.—*Schol. ad Horat.*, *Epist.*, 1, 20, 1.) Varro, in one place, says he was a Tuscan god, and that, therefore, his statue was in the Tuscan street at Rome (*L. L.*, 4, 4, p. 14); in another, he sets him among the gods worshipped by the Sabine king Tatius. (*L. L.*, p. 22.) Horace uses *Vertumnus* in the plural number (*Epist.*, 2, 7, 14), and the scholiast observes that his statues were in almost all the municipal towns of Italy.—*Vertumnus* (from *verto*, "to turn" or "change") is probably the translation of a Tuscan name; and the most rational hypothesis respecting this god is, that he was a deity presiding over the seasons, and their manifold productions in the vegetable world. (*Propert.*, 4, 2.—*Müller, Etrusk.*, vol.

2, p. 51, *seq.*) Ceres and Pomona were associated with him. The Vortumnalia were in October. (*Varro, L. L.*, 5, p. 57.—*Keighley's Mythology*, p. 534.)

VERUS, L. AELIUS, father of the Emperor Verus, was adopted by the Emperor Hadrian, and received from him the title of Cæsar, A.D. 136. He died, however, a few months before Hadrian. Verus appears to have been of but moderate abilities, and too much addicted to the pleasures of the table, as well as other indulgences. (*Spartian.*, *Vit. Ver.*)—II. L. AELIUS, Aurelius, Cæionius, Commodus, son of the preceding, was adopted by Antoninus Pius, along with Marcus Aurelius, in accordance with the express wish of Hadrian. At the time of his adoption he was only in the seventh year of his age, and he afterward married Lucilla, the daughter of his adoptive parent. After the death of Antoninus Pius, the senate declared Marcus Aurelius sole emperor; but this good prince hastened to share the throne with his adopted brother Verus. The dissimilarity between the characters of these two emperors, Aurelius all purity and excellence, and Verus most profligate and licentious, was, perhaps, the cause of the cordial harmony which subsisted between them during the course of their common reign. Verus took the command of the army which was sent against the Parthians, over whom, by the skill and valour of his generals, he obtained several considerable victories, and captured several towns, while he himself was revelling in debaucheries at Antioch. At the conclusion of this war, Verus returned to enjoy the honours of a triumph which he had no share in obtaining. Not long after this, when the war of the Marcomanni and other tribes of similar origin broke out, the two emperors left Rome to take the field in person against these dangerous antagonists. Verus died, however, of apoplexy soon after the commencement of the war, at the age of 59. In licentiousness and debauchery, Verus equalled the worst Roman emperors, but he was altogether free from the charge of cruel or tyrannical acts. (*Capitol.*, *Vit. Ver.*)

VESÆVUS. *Vid. Vesuvius.*

VESPASIANUS, TITUS FLAVIUS, a Roman emperor, descended from an obscure family at Reate. His valour and prudence, but, above all, the influence of Narcissus, the freedman of Claudius, obtained him the consulship, A.D. 52, for the last three months of the year. Some years after this, during the reign of Nero, he fell into disgrace with that emperor for having suffered himself to be overcome by sleep during the reading of some of that prince's poetry. The Jews having revolted towards the close of the year 64, Nero, who did not wish to place at the head of his forces a man whose birth or talents might win the favour of the soldiery, gave the command to Vespasian. While the latter was prosecuting the war with great success, and was engaged in the siege of Jerusalem, Nero was cut off; Galba hardly reached the capital before he lost his crown and life; Otho, his successor, slew himself after the defeat at Bedriacum; and, amid the ferment and agitation that everywhere prevailed, the ardour of his troops, and the wishes of a large portion of the East, induced Vespasian to contest the crown with Vitellius. He was proclaimed emperor by his legions, July 1st, A.D. 69, and on the 30th December of the same year, his general Antonius Primus made himself master of Rome. Vespasian obtained possession of the throne in his fifty-ninth year, and became the founder of a dynasty which gave three emperors to Rome. He was a man of rare and excellent virtues, thoroughly matured by a life spent in the exercise of public duties, and with no object superior to that of promoting the public welfare. Being well aware of the glaring abuses which had long been perpetrated with impunity in all branches of the administration, he set himself vigorously to the dangerous task of effecting a thorough reform. He restored the privileges of the sen

ate, and gave it once more an actual power in the government. The courts of law were also subjected to a most salutary reform, and rendered again, what they had long ceased to be, courts of justice. The insubordination of the army, which had been the cause of so many bloody revolutions, he repressed with a firm and steady hand; and restored, in a great measure, the discipline which had made it so powerful in its better days. He directed his attention also to the treasury, which had been quite exhausted by the prodigal and corrupt expenditure of his predecessors; and, in order to replenish its coffers, he regulated anew the tribute and custom-dues of the provinces, and imposed a number of taxes; by which means, though he was accused of avarice, he placed once more the revenues of the empire on a stable basis, and restored them to a flourishing condition. The large sums thus raised Vespasian did not expend in revelry, neither did he board up in useless masses. He rebuilt the temple of Jupiter Capitolinus, which had been destroyed during the tumults that accompanied the fall of Vitellius; and adorned the city with many other public buildings of great elegance and splendour; thus evincing, that, though rigorous and exact in his methods of amassing treasure, he knew, on proper occasions, how to use it with no parsimonious hand. Under him the empire began to breathe with fresh life, and to exhibit signs of prosperity and happiness, such as it had not known since the reign of Augustus. His son Titus being raised to the dignity of Cæsar, by which name the successor to the throne was designated, the peace and welfare of the empire seemed secured on a stable basis. During the reign of Vespasian, the arms of Rome were prosperous in various parts of the world. Several states bordering on the Roman dominions were reduced by his generals to the condition of provinces. But the most celebrated, though not the most formidable war which distinguished his reign, was that in which he was engaged when he was called to the throne, the war against the Jews. This was conducted by his son Titus after his departure to Rome to enter on the possession of imperial power. The events of this memorable war are so well known that they need not here be detailed. Suffice it to state, that after Jerusalem had been closely invested, the Jews refused all terms of capitulation, blindly trusted in some terrible interposition of divine power to save them and consume their enemies, butchered each other with inconceivable barbarity during every temporary cessation of warfare, enduring the wildest extremes of famine, and, after suffering every form and kind of misery, to a degree unparalleled in the world's history, their city was taken, and, together with their celebrated temple, was reduced to heaps of shapeless ruins; and such of them as survived these awful calamities were scattered over the face of the earth, and rendered a mockery, a proverb, and a reproach among nations. In consequence of this victory over the Jews, Titus and the emperor enjoyed together the honours of a splendid triumph, while the rich vessels of the temple of Jerusalem were in gorgeous procession borne in the train of the conquerors. Soon after this triumph, the Batavian war broke out, caused by the civil wars for the empire, and threatening Rome with the loss of a province. It was at length brought to a propitious conclusion by Cerealis, after several sharp encounters, and by a treaty rather than a conquest. The Roman arms were more successful in Britain during the reign of Vespasian and his immediate successor than they had previously been. In his younger days, the emperor had himself been engaged in British wars; and, being desirous of reducing the island completely under the Roman yoke, he gave the command to Cneius Julius Agricola, a man of extraordinary merit, a general and a statesman worthy of the best days of Rome. Not only the southern division of the island was sub-

dued by this distinguished commander, but even the more remote regions of Caledonia, hitherto impervious to the Roman legions, were laid open. The gallant resistance of the brave Caledonians, under their leader Galgacus, was ineffectual; their untaught valour could not withstand the steady discipline of the Roman army, and they sustained a severe overthrow at the base of the Grampians. The Roman fleet, coasting the shore, ascertained the insular character of Britain; but so formidable were the mountain-fastnesses of Caledonia, that Agricola did not attempt to penetrate farther into the country, contenting himself with constructing a chain of forts between the Friths of Clyde and Forth, to defend the southern districts, and to restrain the recoil and assaults of the unconquered Caledonians. Thus glorious abroad and beloved at home, Vespasian's life began to draw near its termination. Feeling the effects of age and weakness, he retired to Campania, to enjoy the benefits of a purer air than that of Rome, together with some relaxation from the cares of state. There he was seized with a malady which his own sensations told him would speedily prove mortal. His anticipations proved true; and he expired in the arms of his attendants, in the seventieth year of his age and the tenth of his reign. It is worthy of remark, that Vespasian was the second of the Roman emperors that died a natural death, and the first that was succeeded by his son. (*Hetherington's History of Rome*, p. 187, *seqq.*)

VESTA, a goddess among the Romans, the same with the Greek Hestia (*Ἑστία*). An idea of the sanctity of the domestic *hearth* (*ἑστία*), the point of assembly of the family, and the symbol of the social union, gave the Greeks occasion to fancy it to be under the guardianship of a peculiar deity, whom they named, from it, Hestia. This goddess does not appear in the poems of Homer, though he had abundant opportunities of noticing her. By Hesiod (*Theog.*, 454) she is said to have been the daughter of Saturn and Rhea. The hymn to Venus relates that Hestia, Diana, and Minerva were the only goddesses that escaped the power of the queen of love. When wooed by Neptune and Apollo, Hestia, placing her hand on the head of Jupiter, vowed perpetual virginity. Jupiter, in place of marriage, gave her "to sit in the middle of the mansion, receiving the choicest portions of the sacrifice, and to be honoured in all the temples of the gods." (*Hymn. in Ven.*, 22, *seqq.*) In the Prytæneum of every Grecian city stood the *hearth*, on which the sacred fire flamed, and where the offerings were made to Hestia. (*Pind.*, *Nem.*, 11, 1, *seqq.*) In that of Athens there was a statue of the goddess.—The same obscurity involves the Vesta of the Romans as the corresponding Hestia of the Greeks, with whom she is identical in name and office (*Ἑστία*, *Ἑστία*, *Vesta*). There is every reason to believe her worship to have formed part of the religion of the ancient Pelægian population of Latium (*Dion. Hal.*, 2, 66), as it is by all testimony carried back to the earliest days of the state, and its introduction is ascribed to Numa. (*Liv.*, 1, 20.—*Plut.*, *Vit. Num.*, 9, *seqq.*) Like Hestia, she was a deity presiding over the public and private hearth: a sacred fire, tended by six virgin-priestesses, called Vestals, flamed in her temple at Rome. As the safety of the city was held to be connected with its conservation, the neglect of the virgins, if they let it go out, was severely punished, and the fire was rekindled from the rays of the sun.—The temple of Vesta was round: it contained no statue of the goddess. (*Ovid*, *Fast.*, 6, 295, *seq.*) Her festival, celebrated in June, was called Vestalia: plates of meat were sent to the Vestals to be offered up; the millstones were wreathed with garlands of flowers, and the mill-axes, also crowned with violets, went about with cakes strung round their necks. (*Ovid*, *Fast.*, 6, 311, *seqq.*—*Propert.*, 4, 1, 23.) In the forum at Rome there was a statue

of the Stata Mater, placed there that she might protect the pavement from the effect of the fires which used to be made on it in the nighttime. The people followed the example, and set up similar statues in several of the streets. Stata Mater is generally supposed to have been Vesta. (*Keightley's Mythology*, p. 95, 513, *seq.*)

VESTĀLES, priestesses among the Romans consecrated to the service of Vesta. They are said to have been first established by Numa, who appointed four. Tarquinius Priscus added two more; and the number continued to be six ever after. The Vestal virgins were bound to their ministry for thirty years. After thirty years' service they might leave the temple and marry; which, however, was seldom done, and was always reckoned ominous. (*Dion. Hal.*, 2, 67.) These priestesses were bound to observe the strictest purity of morals. If any one of them violated her vow of chastity, she was buried alive in the *Campus Sceleratus*, and her paramour was scourged to death in the Forum. (*Vid.* Vesta.)

VESTINI, a mountaineer race of Italy, whose territory was bounded on the south and southwest by the Peligni and Marsi, on the east by the Adriatic, and on the north and northwest by the Prætutii and Sabines. The history of the Vestini offers no circumstances of peculiar interest: they are first introduced to our notice in the Roman annals as allies of the Samnites, to whom they are said not to have been inferior in valour; but, being separately attacked by the Romans, the Vestini, too weak to make any effectual resistance, were soon compelled to submit, A.U.C. 451. (*Liv.*, 8, 29.—*Id.*, 10, 3.) This people, however, were not behind-hand with their neighbours in taking up arms on the breaking out of the Social war. They bore an active part in the exertions and perils of that fierce and sanguinary contest, and received their share of the rights and privileges which, on its termination, were granted to the confederates. Their chief city was Pinna, now *Civité di Penna*. (*Cramer's Anc. Italy*, vol. 1, p. 335.)

VESUVIUS. *Vid.* Vesuvius.

VESŪLUS, now *Monte Viso*, a mountain at the termination of the Maritime, and commencement of the Cottian, Alps. It is celebrated in antiquity as giving rise to the Padus or Po. Pliny (3, 16) mentions the source as being a remarkable sight. The Po flows from two small lakes, the one situate immediately below the highest peak of *Monte Viso*, the other still higher up, between that peak and the lesser one called *Visoletto*. The waters of this second lake find vent in a great cavern; and this, probably, is the source to which Pliny alludes. (*Cramer's Anc. Italy*, vol. 1, p. 28.)

VESUVIUS, a mountain of Campania, about six miles southeast of Naples, celebrated for its volcano. It appears to have been first known under the name of *Vesuvius* (*Lucr.*, 6, 747.—*Virg.*, *Georg.*, 2, 224.—*Stat.*, *Sylv.*, 4, 8, 4); but the appellations of *Vesuvius* and *Vesubius* are no less frequently applied to it. (*Sil. Ital.*, 17, 594.—*Val. Flacc.*, 3, 208.—*Mart.*, 4, 44.) Strabo describes this mountain as extremely fertile at its base, an account in which many ancient writers agree, but as entirely barren towards the summit, which was mostly level, and full of apertures and cracks, seemingly produced by the action of fire; whence Strabo was led to conclude that the volcano, though once in a state of activity, had been extinguished from want of fuel. (*Strabo*, 246.) Diodorus Siculus (4, 21) represents it also as being in a quiescent state, since he argues, from its appearance at the time he was writing, that it must have been on fire at some remote period. The volcano was likewise apparently extinct, when, as Plutarch and Florus relate, Spartacus, with some of his followers, sought refuge in the cavities of the mountain from the pursuit of

their enemies, and succeeded in eluding their search. (*Plut.*, *Vit. Crass.*—*Flor.*, 3, 20.—*Cramer's Ancient Italy*, vol. 2, p. 178.)—The first great eruption on record took place on the 24th of August, A.D. 79, and on the same day the towns of Herculaneum, Pompeii, and Stabia were buried under showers of volcanic sand, stones, and scorias. Such was the immense quantity of volcanic sand (called *ashes*) thrown out during this eruption, that the whole country was involved in pitchy darkness; and, according to Dion, the ashes fell in Egypt, Syria, and various parts of Asia Minor. This eruption proved fatal to the elder Pliny. He had the command of the Roman fleet on the coast of Campania, and, wishing to succour those persons who might want to escape by sea, and also to observe this grand phenomenon more nearly, he left the Cape of Misenum, and approached the side of the bay nearest to Vesuvius. He landed, and advanced towards it, but was suffocated by the sulphureous vapour.—After this, Vesuvius continued a burning mountain for nearly a thousand years, having eruptions at intervals. The fire then appeared to become nearly extinct, and continued so from the beginning of the 12th to that of the 16th century. Since the eruption of 1506, it has remained burning to the present time, with eruptions of lava and ashes at intervals. Vesuvius rises to the height of 3600 feet above the sea. It has two summits, the more northern one of which is called *Somma*, the other is properly called *Vesuvius*. *Somma* is supposed to have been part of the cone of a larger volcano, nearly concentric with its present cone, which, in some great eruption, has destroyed all but this fragment.

VETRONES, a nation of Lusitania, lying along the eastern boundary. The city of Augusta Emerita (now *Merida*) took from them the name of *Vettoniana* Colonia. (*Cæs.*, *Bell. Civ.*, 1, 38.—*Plin.*, 4, 20.)

VETULONI, one of the most powerful and distinguished of the twelve cities of Etruria, a few miles to the southwest of Veterna. Its position was long a matter of uncertainty, until an Italian antiquary, Ximenes, proved the ruins of the place to exist in a forest still called *Selva di Vetula*.—If we may believe Silius Italicus (8, 488), it was Vetulonii that first used the insignia of magistracy common to the Etruscans, and with which Rome afterward decorated her consuls and dictators. (*Cramer's Anc. Italy*, vol. 1, p. 187.)

VETURIA, the mother of Coriolanus. (*Vid.* *Coriolanus*.)

UFENS, I. the *Aufente*, a river of Latium, rising in the Volscian Mountains, above Setia and Privernum, and, in consequence of the want of a sufficient fall in the Pontine plains, through which it passed, contributing, with other streams, to form the Pontine marshes. It communicated its name, which was originally written *Oufens*, to the tribe *Oufentina*, according to Lucilius, as quoted by Festus (*s. v.* *Oufens*). Virgil alludes to its sluggish character. (*Cramer's Anc. Italy*, vol. 2, p. 97.)—II. A prince who assisted Turnus against Æneas, and was slain by Gyas. He was leader of the Nursian forces. (*Virg.*, *Æn.*, 7, 745.—*Id.*, 10, 518, &c.)

UFENTINA, or, more correctly, *OUFENTINA*, a Roman tribe, first created A.U.C. 435, with the tribe *Falerina*, in consequence of the great increase of population at Rome. (*Liv.*, 9, 20.—*Festus*, *s. v.* *Oufens*.—*Vid.* *Ufens*.)

VIA, I. *ÆMILIA*. (*Vid.* *Æmilia V.* and *VI.*)—II. *Appia*. (*Vid.* *Appia Via*, &c.)

VIADRUS or **VIADUS**, a river of Germany, generally regarded as answering to the modern *Oder*. Reichard, however, considers the *Viadus* as the same with the *Wipper*. (*Bischoff und Möller, Wörterb. der Geogr.*, p. 1005.)

VIBIUS, I. Crispus, a Latin rhetorician, to whom some ascribe the declamation against Cicero which has

come down to us. (*Vid. Porcius*).—II. *Sequester*, a Latin writer, who has left a geographical work, containing a kind of nomenclature of rivers, fountains, lakes, forests, marshes, mountains, and nations mentioned by the poets. The work was compiled for the use of Virgilianus, the author's son. As no ancient writer makes mention of this writer, and as his production contains no account either of himself, his country, or the period when he wrote, his era can only be fixed by conjecture. Oberlinus believes that he lived after the fall of the Western empire, in the fifth, sixth, or seventh century. The same critic regards the work as a hasty performance, and as containing, besides numerous errors attributable to the copyists, some which must be ascribed to the author himself. Still the work is not without its value, from its containing several names nowhere else mentioned. The celebrated *Boccaccio* compiled a production of a similar nature in the fourteenth century, and made great use of the work of *Sequester*, without ever citing it. The best edition of *Vibius Sequester* is that of Oberlinus, *Argent.*, 1778, 8vo.

VISO, Valentia. *Vid. Hipponium*.

VICA PORA, a goddess at Rome, who presided over victory ("potis vincendi atque potiusi";—*Cic.*, *de Leg.*, 2, 11.—Consult *Goerzen*, *ad loc.*—*Senec.*, *Apolocolynch.*—*Liv.*, 2, 7.)

VICENTIA, a town of Gallia Cisalpina, in the territory of Venetia, and situate between Patavium and Verona. The name is sometimes written Vicetia. (*Strab.*, 314.—*Ellan*, *V. H.*, 14, 8.) It is now Vicenza.

VICTOR, SEPT. AURELIUS, I. a Latin historian, born in Africa of very humble parents, but who raised himself by his merit to some of the highest offices in the state. The Emperor Julian, who became acquainted with him at Sirmium, A.D. 360, gave him the government of the second Pannonia, and erected in honour of him a statue of bronze. Ammianus Marcellinus, who states this fact, informs us also that Aurelius Victor was conspicuous for the purity of his moral character (31, 10). Sixteen years after this, Theodosius the Great appointed him prefect of Rome. The period of his death is not ascertained. The manner in which he speaks of the apotheosis of Antinoüs, the favourite of Hadrian, shows that he was not a Christian. Three works are ascribed to this writer. The first bears the title of *Origo gentis Romanæ*, to which a long additional title has been given by the copyists. What we have remaining of this work comprises only the first year of Rome: it contains extracts from works now lost, and makes us acquainted with several circumstances of which no other writer speaks. The opinion which assigns this work to Aurelius Victor, however, has no historical fact whatever to serve as a basis; it is contrary, also, to the conviction of the grammarians, to whom we owe the long additional title already mentioned. These grammarians regard the work as subsequent to the time of Aurelius Victor.—The second work is entitled "*De Viris illustribus Romæ*," and contains the lives of various illustrious Romans, commencing with the seven kings of Rome, and also biographies of some eminent foreigners, such as Hannibal, Antiochus, and Mithradates. This work, inferior in style to the former, has been sometimes ascribed to Cornelius Nepos, to Suetonius, or to Pliny the Younger. It is possible that it is an abridgment merely of Cornelius Nepos, whose work bears a similar title. The third work is entitled "*De Caesaribus, sive historia abbreviata pars altera, ab Augusto Octaviano, id est, a fine Titi Livii usque ad Consulatum decimum Constantii Augusti et Juliani Caesaris tertium.*" This production is written in a concise and easy style, and the author has had access to good sources of information, of which he avails himself with impartiality.—The best editions of Aurelius Victor

are that of Pitiscus, c. n. *variorum*, *Traj. ad Rh.*, 1696, 8vo, and that of Arntsenius, *Amst.*, 1733, 4to.—II. Surnamed, for distinction' sake, the Younger, a contemporary of Orosius, who made an abridgment of one of the works of the elder Victor (the third above mentioned), which he entitled "*Epitome de Caesaribus*," or, according to others, "*De Vita et Moribus Imperatorum Romanorum*," and which he continued down to the death of Theodosius the Great. He made some changes also in the original work, and added some new facts and circumstances. (*Schöll*, *Hist. Lit. Rom.*, vol. 3, p. 171.)

VICTORIA, one of the deities of the Romans, called by the Greeks Νίκη. The goddess of Victory was sister to Strength and Valour, and was one of the attendants of Jupiter. Sylla raised her a temple at Rome, and instituted festivals in her honour. She was represented with wings, crowned with laurel, and holding the branch of a palm-tree in her hand. A golden statue of this goddess, weighing 320 pounds, was presented to the Romans by Hiero, king of Syracuse, and deposited in the temple of Jupiter on the Capitoline Hill. (*Varro*, *de L. L.*—*Hygin.*, *graf. fab.*)

VICTORINUS, an African philosopher, who became a convert to Christianity, and flourished in the fourth century. He gained such a degree of reputation by teaching rhetoric at Rome, that a statue was erected to him in one of the public places. He was led to the perusal of the Scriptures by the study of Plato's works. He was the author of several works of no great value contained in the *Bibliotheca Patrum*.

VIDUCABEA, a people of Gallia Lugdunensis Secunda, on both sides of the river Olina or Orne. Their chief city was Argenus, now Bayeux. (*Plin.*, 4, 18.)

VIENNA, a city of the Allobroges, in Gallia Transalpina, on the banks of the Rhone, famed for its wealth and the civilization of its inhabitants. At a later period it became the capital of the province of Viennois, and in the fifth century the residence of the Burgundian kings. It is now *Vienne*. The classical name of this place must not be confounded with the modern appellation of the ancient Vindobona, on the Danube. (*Cæs.*, *B. G.*, 7, 9.—*Tac.*, *Ann.*, 11, 1.—*Mela*, 2, 5.—*Pliny*, 3, 4.—*Amm. Marc.*, 15, 11.)

VILLÆ LEX, *Annalis* or *Annaria*, by L. Villius, the tribune, A.U.C. 574, defined the proper age required for holding offices. There seems, however, to have been some regulation of the kind even before this. (*Livy*, 40, 43.—*Id.*, 25, 2.)

VIMINALIS, one of the seven hills on which Rome was built, so called from the number of osiers (*vimina*) which grew there. Servius Tullius first made it part of the city. Jupiter had a temple there, whence he was called Viminalis. (*Livy*, 1, 44.—*Varro*, *L. L.*, 4, 8.—*Festus*, s. v. *Viminal*.)

VINDELICI, a people of Germany, whose territory, called Vindelicia, extended from the city of Brigantia, on the Lacus Brigantinus, or Lake of Constance, to the Danube; while the lower part of the Enus or Inn separated it from Noricum. Their country answered, therefore, to part of *Wurtemberg* and *Bavaria*. This nation derived their name from the two rivers which water their territory, viz., the Vindo and Licus, now the *Wertach* and the *Leck*. In the angle formed by the two rivers was situate their capital, Augusta Vindelicorum, now *Augsburg*. (*Cluver.*, vol. 1, p. 412, *seqq.*—*Mannert*, *Geogr.*, vol. 3, p. 518, *seqq.*—*Horat.*, *Od.*, 4, 4, 18.)

VINDEX, JULIUS, a governor of Gaul, who revolted against Nero, and determined to deliver the Roman empire from his tyranny. He wrote to Galba, then in Spain, to take the chief command, and aid him in effecting his purpose; but, before any junction could be effected, he was defeated by the forces of Virginus

Rufus, and destroyed himself. (*Sueton., Vit. Galb., 9.—Id. ib., 11.—Plut., Vit. Galb., 4.—Dio Cass., 63, 23, seqq.*)

VINDICUS, a slave who discovered the conspiracy to restore Tarquin to his throne. (*Vid. Brutus i.*)

VINIUS, T., a friend of Galba's, who, on the accession of the latter to the imperial throne, became consul, commander of the prætorian guards, and principal minister of the new monarch. He employed his newly-acquired power, however, in criminal and oppressive acts, plundering others to enrich himself. Vinus advised Galba to adopt Otho for his successor; but, Galba having nominated Piso, Otho revolted, de-throned Galba, and Vinus perished along with the latter, notwithstanding his vehement protestations to the soldiery that Otho had not ordered his death. It is probable that Vinus was implicated in the conspiracy of Otho itself against his friend and protector. (*Tacit., Hist., 1, 11, &c.*)

VIRIUS (qui vir bis fuit), a name given to Hippolytus after he had been brought back to life by Æsculapius, at the instance of Diana, who pitied his unfortunate end. Virgil makes him son of Hippolytus. (*Æn., 7, 762.—Ovid, Met., 15, 544.*)

VIRGILIUS, MARO PUBLIUS, a celebrated Latin poet, born at the village of Andes, a few miles distant from Mantua, about 76 B.C. It has been disputed whether his name should be Vergilius or Virgilius. "*De scriptura nominis*," says Heyne, "*digladiati sunt inter se cum veteres tum recentiores grammatici*." The letters *e* and *i* were frequently convertible in the old Latin language; and sanction may be found for either mode of spelling, both in MSS. and inscriptions. At the revival of letters, Politian contended strenuously for Vergilius; but even his authority was not sufficient to bring this orthography into general practice. There exist but few authentic materials from which we can collect any circumstances concerning the life of the poet. We possess only some scattered remarks of ancient commentators or grammarians, and a life by Donatus, of very dubious authority. It bears the name of Tiberius Claudius Donatus, who lived in the fifth century, some time after Ælius Donatus, so well known as a commentator on Terence. Heyne thinks that the basis of the life was laid by Donatus, but that it was altered and interpolated from time to time by the grammarians, and librarians of the convents. It is thus apparently written without any arrangement in the series of events, and many things are recorded which are manifestly fictitious. The monks, indeed, of the middle ages seem to have conspired to accumulate fables concerning Virgil.—It appears that Virgil's father was a man of low birth, and that, at one period of his life, he was engaged in the meanest employments. According to some authorities he was a potter or brickmaker; and, according to others, the hireling of a travelling merchant, called Magus or Maius. He so ingratiated himself, however, with his master, that he received his daughter Maia in marriage, and was intrusted with the charge of a farm which his father-in-law had acquired in the vicinity of Mantua. Our poet was the offspring of these humble parents. The cradle of illustrious men, like the origin of celebrated nations, has been frequently surrounded by the marvellous. Hence the dream of his mother Maia, that she had brought forth a branch of laurel, and the prodigy of the swarm of bees which lighted on the lips of the infant. The studies of Virgil commenced at Cremona, where he remained till he assumed the toga virilis; and to this day the inhabitants of Cremona pretend to show a house, in the street of St. Bartholomew, in which Virgil resided when a youth. (*Cremona Literata*, 2, p. 401, ap. Fabr., *Bibl. Lat.*, lib. 1, c. 12.) At the age of sixteen he removed to Mediolanum, and shortly afterward to Neapolis, where he laid the foundation of that multifarious learning which

shines so conspicuously in the Æneid, and which he employed with so much judgment as richly to merit the eulogy of Macrobius, "*Virgilius quem nullius unquam disciplina error involvit*." (*In Somn., Scip., 2, 8.*) During his residence in this city he perused the most celebrated Greek writers, being instructed in their language and literature by Parthenius Nicanus (*Macrobi., Sat., 5, 17*), well known as the author of a collection of amatory tales, which he wrote for the use of Cornelius Gallus, in order to furnish him with materials for elegies and other poems. Virgil likewise carefully read the Greek historians, particularly Thucydides (*Mureti Opera*, vol. 2, p. 312, *ed. Ruhnck.*), and he studied the Epicurean system of philosophy under Syro, a celebrated teacher of that sect. But medicine and mathematics were the sciences to which he was chiefly addicted; and to this early tincture of geometrical knowledge may, perhaps, in some degree, be ascribed his ideas of luminous order and masterly arrangement, and that regularity of thought, as well as exactness of expression, by which all his writings were distinguished.—Virgil, it is well known, was regarded as a wizard during the dark ages. His character as an adept in magic probably originated in his knowledge of mathematics; in the Pharmaceutria of his eighth eclogue; in his revelation of the secrets of the unknown world in the sixth book of the Æneid; and in the report that he had ordered his books to be burned, which naturally created a suspicion that he had disclosed in them the mysteries of the black art. In whatever way it may have originated, the belief in his magic powers appears to have prevailed as soon as mankind lost the refinement of taste which enabled them to appreciate his exquisite productions. The current fictions concerning the magical operations of Virgil were first incorporated about the beginning of the thirteenth century, in the "*Otia Imperialia*" of Gervase of Tilbury, chancellor of the Emperor Otho IV., to whom he presented his extravagant compilation. The fables of Gervase were transcribed by Helinandus the monk, in his "*Universal Chronicle*;" and similar tales were related in the work of Neckham, "*De Naturis Rerum*," and in "*The Seven Wise Masters*." Such books supplied materials for the old French romances of "*Vergilius*," and the English "*Life of Vergilius*," in which stories are told of miraculous palaces, wonderful lamps, and magical statues which he constructed. Vergilius, the sorcerer of the middle ages, is identified and connected with the author of the Æneid, from several circumstances being related of the former in the romances which actually occurred in the life of the poet, particularly his residence at Naples, and the loss of his inheritance, which he recovered by the favour of the emperor of Rome. It was also a common opinion in the fourteenth and fifteenth centuries, as appears from the writings of that age, that the Mantuan bard and the sorcerer were one and the same person. It is somewhat in the same spirit that a learned and ingenious writer of our own days seeks to convert the bard into a member of the Druid priesthood! (*Higgins's Celtic Druids*, p. 32.)—Donatus affirms, that, after Virgil had finished his education at Naples, he went to Rome, where his skill in the diseases of all sorts of animals procured him an appointment in the stables of the emperor. Stories are related concerning his prediction as to the defects of a colt, which, to all the jockeys of the Augustan age, appeared to promise remarkable swiftness and spirit; and concerning a query propounded to him, as if he had been a sorcerer, with regard to the parentage of Augustus; all which are evidently inventions of the middle ages, and bear, indeed, much resemblance to a tale in the *Cento Nouvelle Antiche*, as also to the stories of the "*Three Sharps*," and the "*Sultan of Yemen with his three Sons*," published some years ago in Mr. Scott's additional volume to the Arabian

Tales.—It does not seem certain, or even probable, that Virgil went at all to Rome from Naples. It rather appears that he returned to his native country, and to the charge of his paternal farm; and if, as is generally supposed, he intended to describe his own life and character under the person of Tityrus, in the first eclogue, it is evident that he did not visit Rome until after the battle of Philippi, and consequent division of the lands among the soldiery. Some poems which are still extant, as the *Culex* and *Ciris*, were at one time believed to have been the fruits of his genius at this early period. We are also told, that, in the warmth of his earliest youth, he had formed the bold design of writing, in imitation of Ennius, a poem on the wars of Rome, but that he was deterred from proceeding by the ruggedness of the ancient Italian names, which wounded the delicacy of his ear. It seems certain, at least, that, previous to the composition of his *Eclogues*, he had made imperfect attempts in the higher departments of heroic poetry. (*Eclog.*, 6, 3.)—The battle of Mutina (*Modena*) was fought in 711 A.U.C., and the triumvirate having been shortly afterward formed, Asinius Pollio was appointed, on the part of Antony, to the command of the district in which the farm of Virgil lay. Pollio, who was a noted extortioner, levied enormous contributions from the inhabitants of the territory intrusted to his care; and, in some instances, when the pecuniary supplies failed, he drove the ancient colonists from their lands, and settled his veterans in their place. He was fond, however, of poetry, and was a generous protector of literary men. The rising genius of Virgil had now begun to manifest itself. His poetic talents and amiable manners recommended him to the favour of Pollio; and, so long as that chief continued in command of the Mantuan district, he was relieved from all exaction, and protected in the peaceable possession of his property. Residing constantly in the country, and captivated with the rural beauties of the *Idyllia* of Theocritus, Virgil early became ambitious of introducing this new species of poetry into his native land; and, accordingly, he seems to have bent his chief endeavours at this time to imitate and rival the sweet Sicilian. The eclogue entitled "*Alexis*," which is usually placed second in the editions of his works, is supposed to have been his first pastoral production, and to have been written in 711, the year in which Pollio came to assume the military command of the territory where our poet resided. It was quickly followed by the "*Daphnis*" and "*Silenus*," as also by the "*Palamon*," in which he boasts of the favour of Pollio, and expresses his gratitude for the favour that leader had extended to him. But the tranquillity he enjoyed under the protection of Pollio was of short duration. Previously to the battle of Philippi, the triumvirs had promised to their soldiers the lands belonging to some of the richest towns in the empire. Augustus returned to Italy in 712, after his victory at Philippi, and found it necessary, in order to satisfy their claims, to commence a division of lands in Italy on a more extensive scale even than he had intended. In that country there were considerable territories which had been originally and legally the patrimony of the state. But extensive tracts of this species of public property had, from time to time, been appropriated by corporations and individuals, who were unwilling to be disturbed in their possessions. Julius Cæsar had set the example of reclaiming these farms and colonizing them with his soldiers. His successor now undertook a similar but more extensive distribution. In the middle and south of Italy, however, the lands were chiefly private inheritance, or had been so long retained by individuals that a claim had been acquired to them by length of possession; but in the north of Italy they were for the most part public property, on which colonists had been more recently settled. These were the lands first assigned to the soldiers; and the

district to the north of the Po was, in consequence, chiefly affected by the partition. Cremona had, unfortunately, espoused the cause of Brutus, and thus peculiarly incurred the vengeance of the victorious party. But as its territory was not found adequate to contain the veteran soldiers of the triumvirs, among whom it had been divided, the deficiency was supplied from the neighbouring district of Mantua, in which the farm of Virgil lay. The discontent which this oppressive measure created in Italy, being augmented by the artifices of Fulvia and Lucius Antony, the wife and brother of the triumvir, gave rise to the war which terminated favourably for Augustus with the capture of Perugia. Pollio, being a zealous partisan of Antony, and supporting the party of his brother and Fulvia, who unsuccessfully opposed the division of the lands, had it probably no longer in his power to protect Virgil from the aggressions of the soldiers. He was dispossessed under circumstances of peculiar violence, and which even threatened danger to his personal safety; being compelled on one occasion to escape the fury of the centurion Arrius by swimming over the Mincius. He had the good fortune, however, to obtain the favour of Alphenus Varus, with whom he had studied philosophy at Naples, under Syro the Epicurean, and who now either succeeded Pollio in the command of the district, or was appointed by Augustus to superintend in that quarter the division of the lands. Under his protection Virgil twice repaired to Rome, where he was received, not only by Mæcenas, but by Augustus himself, from whom he procured the restoration of the patrimony of which he had been deprived. This happened in the commencement of the year 714; and during the course of that season, in gratitude for the favours he had received, he composed his eclogue entitled *Tityrus*, in which he introduces two shepherds, one of whom laments the distraction of the times, and complains of the aggressions of the soldiery, while the other rejoices over the recovery of his farm, and vows ever to honour as a god the youth who had restored it. The remaining eclogues, with the exception, perhaps, of the tenth, called "*Gallus*," were produced in the course of this and the following year.—Virgil had now spent three years in the composition of pastoral poetry and in constant residence on his farm, except during the two journeys to Rome which he was compelled to undertake for its preservation. In his pastorals, however, though written in his native fields, we do not find many delineations of Mantuan scenery, or very frequent allusions to the Mincius and its borders. His great object was to enrich his native language with a species of poetry unknown in Latium, and, to promote his success, he chose Theocritus as his model. With few attempts at invention, he pretended to little more than the merit of being the first Roman who had imitated the Sicilian poet, and hence he did not hesitate to borrow, not only the sentiments and images, but even the rural descriptions of his master.—The situation of Virgil's residence was low and humid, and the climate chill at certain seasons of the year. His delicate constitution, and the pulmonary complaint with which he was affected, induced him, about the year 714 or 715, when he had reached the age of thirty, to seek a warmer sky. To this change, it may be conjectured, he was farther instigated by his increasing celebrity and the extension of his poetic fame. His countrymen were captivated by the perfect novelty of pastoral composition, and by the successful boldness with which Virgil had transferred the sweet Sicilian strains to a language which, before his attempt, must have appeared, from its hardness and severity, but little adapted to be a vehicle for the softness of rural description or the delicacy of amorous sentiment, and which had scarcely yet been polished or refined to the susceptibility of such smooth

numbers as the pastoral muse demanded. The Bucolics accordingly were relished and admired by all classes of his contemporaries. So universal was their popularity, that the philosophic eclogue of *Silvius*, soon after its composition, was publicly recited in the theatre by Cytheris, a celebrated actress of mimes.—On quitting his paternal fields, Virgil first proceeded to the capital. Here his private fortune was considerably augmented by the liberality of Mæcenas (*Mar. dial.* 8, 56); and such was the favour he possessed with his patron, that we find him, soon after his arrival at Rome, introducing Horace to the notice of the minister (*Hor., Sat.*, 1, 6), and attending him, along with that poet, on a political mission to Brundisium. Nor did Virgil enjoy less favour with the emperor himself than with his minister. It is said that he never asked anything of Augustus that was refused; and Donatus even affirms, though, it must be confessed, without the least probability, that Augustus consulted him with regard to his resignation of the government, as a sort of umpire between Agrippa and Mæcenas. It was probably during this period of favour with the emperor and his minister that Virgil contributed the verses in celebration of the deity who presided over the gardens of Mæcenas; and wrote, though without acknowledging it, that well-known distich in honour of Augustus,

*"Nocte pluit tota; redeunt spectacula mane;
Divisum imperium cum Jove Caesar habet."*

The story goes on to relate, that Bathyllus, a contemptible poet of the day, claimed these verses as his own, and was liberally rewarded. Vexed at the imposture, Virgil again wrote the verses in question near the palace, and under them,

"Hæc ego versiculos feci, tulit alter honores ;

with the beginning of another line in these words,

"Sic vos non vobis,"

four times repeated. Augustus wished the lines to be finished; Bathyllus seemed unable; and Virgil at last, by completing the stanza in the following order,

*"Sic vos non vobis nidificatis aves;
Sic vos non vobis vellera fertis oves;
Sic vos non vobis mellificatis apes;
Sic vos non vobis fertis aratra boves,"*

proved himself to be the author of the distich, and the poetical usurper became the sport and ridicule of Rome. During his residence at Rome, Virgil inhabited a house on the Esquiline Hill, which was furnished with an excellent library, and was pleasantly situated near the gardens of Mæcenas. The supposed site, and even ruins of this mansion, were long shown to modern travellers.—Yet, however enviable was Virgil's present lot, the bustle and luxury of an immense capital were little suited to his taste, to his early habits, or to the delicacy of his constitution, while the observance and attention he met with were strongly repugnant to the retiring modesty of his disposition. Such was the popularity which he derived from his general character and talents, that, on one occasion, when some of his verses were recited in the theatre, the whole audience rose to salute Virgil, who was present, with the same respect which they would have paid to the emperor. (*De Caus. corr. elog.*, c. 13.) And so great was the annoyance which he felt on being gazed at and followed in the streets of Rome, that he sought shelter, it is said, in the nearest shops or alleys from public observation.—At the period when Virgil enjoyed so much honour and popularity in the capital, Naples was a favourite retreat of illus-

trious and literary men. Thither Virgil retired about A.U.C. 717, when in the thirty-third year of his age; and he continued, during the remainder of his life, to dwell chiefly in that city, or at a delightful villa which he possessed in the Campania Felix, in the neighbourhood of Nola, ten miles east of Naples, leading a life which may be considered as happy when compared with the fate of the other great epic poets, Homer, Tasso, and Milton, in whom the mind or the vision was darkened. About the time when he first went to reside at Naples, he commenced his *Georgics* by order of Mæcenas, and continued, for the seven following years, closely occupied with the composition of that inimitable poem. During this long period he was accustomed to dictate a number of verses in the morning, and to spend the rest of the day in revising and correcting them, or reducing them to a smaller number, comparing himself in this respect to a she-bear, which licks her misshapen offspring into proper form and proportion. (*Aul. Gell.*, N. A., 17, 10.) Little is known concerning the other circumstances of Virgil's life during the years in which he was employed in perfecting his *Georgics*. He had a dispute, it is said, with his neighbours, the inhabitants of Nola, from whom he requested permission to convey a small stream of water into his villa, which was adjacent to their town. The citizens would not grant the favour, and the offended poet expunged the name of Nola from the following lines of his *Georgics*,

*"Talem dives arat Capua, et Vicinia Vesuvio
Nola jugo—"*

and substituted the word *ora* instead of the obnoxious city. (*Aul. Gell.*, N. A., 7, 20.) The story, however, is entitled to no credit. (*Vid. Nola.*)—The genius of Virgil, being attended with some degree of diffidence, seems to have gained, by slow steps, the measure of confidence which at length emboldened him to attempt epic poetry. He had begun his experience in verse with humble efforts in the pastoral line; though even there we behold his ardent Muse frequently bursting the barriers by which she ought naturally to have been restrained. He next undertook the bolder and wider topic of husbandry; and it was not till he had finished this subject with unrivalled success that he presumed to write the *Æneid*. This poem, which occupied him till his death, was commenced in 724, the same year in which he had completed his *Georgics*. After he had been engaged for some time in its composition, the greatest curiosity and interest concerning it began to be felt at Rome. A work, it was generally believed, was in progress, which would eclipse the fame of the *Iliad* (*Propert.*, 2, 34, 66); and the passage which describes the shield of *Æneas* appears to have been seen by Propertius. Augustus himself at length became desirous of reading the poem so far as it had been carried; and, in the year 729, while absent from Rome on a military expedition against the Cantabrians, he wrote to the author from the extremity of his empire, entreating him to be allowed a perusal of it. Macrobius has preserved one of Virgil's answers to Augustus: "I have of late received from you frequent letters. With regard to my *Æneas*, if, by Hercules, it were worth your listening to, I would willingly send it. But so vast is the undertaking, that I almost appear to myself to have commenced such a work from some defect in judgment or understanding; especially since, as you know, other and far higher studies are required for such a performance." (*Sat.*, 1, 24.)—Prevailed on, at length, by these importunities, Virgil, about a year after the return of Augustus, recited to him the sixth book, in presence of his sister Octavia, who had recently lost her only son Marcellus, the darling of Rome, and the adopted child of Augustus. The poet, probably, in the prospect of this recitation, had inserted the affect-

ing passage in which he alludes to the premature death of the beloved youth :

"O nate, ingentem luctum ne quare tuorum," &c.

But he had skilfully suppressed the name of Marcellus till he came to the line,

"Te Marcellus eris—manibus data lilia plenis."

It may well be believed that the widowed mother of Marcellus swooned away at the pathos of these verses, which no one, even at this day, can read unmoved. Virgil is said to have received from the afflicted parent 10,000 sesterces (*dens sestertia*) for each verse of this celebrated passage.—It was much the practice among the Roman poets to read their productions aloud; and Virgil is said to have recited his verses with wonderful sweetness and propriety of articulation. During the composition of the *Æneid*, he occasionally repeated portions of it to those friends whose criticisms he thought might improve the passage he rehearsed. Eros, his librarian and freedman, used to relate, when far advanced in life, that, in the course of his reciting, his master had extemporarily filled up two hemistichs; the one was "*Misenum Æoliden*," to which he immediately added, "*quo non præstantior alter*," and the other the half verse following, "*Ære clere viros*," to which, as if struck by poetic inspiration, he subjoined, "*Martemque accendere cantu*;" and he immediately ordered his amanuensis to insert these additions in their proper places in the manuscript of his poem.—Having brought the *Æneid* to a conclusion, but not the perfection which he wished to bestow upon it, Virgil, contrary to the advice and wish of his friends, resolved to travel into Greece, that he might correct and polish this great production at leisure in that land of poetic imagination. It was on undertaking this voyage that Horace addressed to him the affectionate ode beginning,

"Sic te Diva potens Cyprî," &c. (1, 3).

Virgil proceeded directly to Athens, where he commenced the revival of his epic poem, and added the magnificent introduction to the third book of the *Georgics*. He had been thus engaged for some months at Athens, when Augustus arrived at that city, on his return to Italy, from a progress through his eastern dominions. When he embarked for Greece, it had been the intention of Virgil to have spent three years in that country in the correction of his poem; after which he proposed to pass his days in his native country of Mantua, and devote the rest of his life to the study of philosophy, or to the composition of some great historical poem. The arrival of Augustus, however, induced him to shorten his stay, and to embrace the opportunity of returning to Italy in the retinue of the emperor. But the hand of death was already upon him. From his youth he had been of a delicate constitution; and, as age advanced, he was afflicted with frequent headaches, asthma, and spitting of blood. Even the climate of Naples could not preserve him from frequent attacks of these maladies, and their worst symptoms had increased during his residence in Greece. The vessel in which he embarked with the emperor touched at Megara, where he was seized with great debility and languor. When he again went on board, his distemper was so increased by the motion and agitation of the vessel, that he expired a few days after he had landed at Brundisium, on the southeastern coast of Italy. His death happened A.U.C. 734, when he was in the 51st year of his age. When he felt its near approach, he ordered his friends Varius and Plotius Tucca, who were then with him, to burn the *Æneid* as an imperfect poem. The ancient classical authorities only say that Virgil commanded the *Æneid* to be burned. (*Phn.*, 7, 30.—*Aul. Gell.*, N. A., 17, 10.—*Macrob.*, Sat., 1, 24.)

Donatus says that he had ordered it to be burned, but adds, that on Varius and Tucca representing to him that Augustus would not permit it to be destroyed, he committed it to them for revision and correction. Moreti relates the story as it is told by Macrobius, Aulus Gellius, and Pliny; and Bayle, as usual, reprehends him because he has not given it according to the version of Donatus. Augustus, however, interposed to save a work which he no doubt saw would at once confer immortality on the poet and on the prince who patronised him. It was accordingly intrusted to Varius and Tucca, with a power to revise and retrench, but with a charge that they should make no additions; a command which they so strictly observed as not to complete even the hemistichs which had been left imperfect. They are said, however, to have struck out twenty-two verses from the second book, where Æneas, perceiving Helen amid the smoking ruins of Troy, intends to slay her, till his design is prevented by his goddess mother. (Consult *Catroux*, *Œuvres de Virgile*; *Dissert. sur le 2d livre de l'Enéide*, note 10.) These lines, accordingly, were wanting in many of the ancient manuscripts, but they have been subsequently restored to their place. There was also a report long current, that Varius had made a change, which still subsists, in the arrangement of two of the books, by transposing the order of the second and third, the latter having stood first in the original manuscript. According to some accounts, the four lines "*Ille ego quondam*," &c., which are still prefixed to the *Æneid* in many editions, were expunged by Varius and Tucca; but, according to others, they never were written by Virgil, and are no better than an interpolation of the middle ages.—Virgil bequeathed the greater part of his wealth, which was considerable, to a brother. The remainder was divided among his patron Mæcenas, and his friends Varius and Tucca. Before his death, he had also commanded that his bones should be carried to Naples, where he had lived so long and so happily. This order was fulfilled, under charge of Augustus himself. According to the most ancient tradition and the most commonly received opinion, the tomb of Virgil lies about two miles to the north of Naples, on the slope of the hill of Pausilippo, and over the entrance to the grotto or subterraneous passage which has been cut through its ridge, on the road leading from Naples to Puteoli. Cluverius and Addison, indeed, have placed the tomb on the other side of Naples, near the foot of Mount Vesuvius; but the other opinion is based upon the common tradition of the country, and accords with the belief of Petrarch, Sannazarius, and Bembo: it may still be cherished, therefore, by the traveller who climbs the hill of Pausilippo, and he may still think that he hails the shade of Virgil on the spot where his ashes repose. Notwithstanding, however, the veneration which the Romans entertained for the works of Virgil, his sepulchre was neglected before the time of Martial, who declares that Silius Italicus first restored its long-forgotten honours. What is at present called the tomb, is in the form of a small, square, flat-roofed building, placed on a sort of platform, near the brow of a precipice, on one side, and on the other sheltered by a superincumbent rock. Half a century ago, when More travelled in Italy, an ancient laurel (a shoot, perhaps, of the same which Petrarch had planted) overhung the simple edifice. (*More's Travels*, Letter 65.) Within the low vaulted cell was once placed the urn supposed to contain the ashes of Virgil. Pietro Stefano, who lived in the thirteenth century, mentions that he had seen the urn, with the epitaph inscribed on it, which is said to have been written by the poet himself a few moments before his death:

"Mantua me genuit; Calabri rapuere; tenet nunc
Parthenope. Cecini pascua, rura, duces."

It was a common practice among the Latin poets to write their own epitaphs; and, if the above distich be the production of Virgil himself, it is eminently expressive of that modesty which is universally allowed to have been one of the many amiable features of his character, and which is by no means observable in the epitaphs composed for themselves by Ennius and Nevius. The Italian writer just cited also remarks, that Robert of Anjou, apprehensive for the safety of such a relic during the civil wars, had the urn conveyed to *Castel Nuovo*. It seems that so much care was taken, that it was concealed too well to be ever afterward discovered.—We have seen that, at Rome, Virgil avoided all public honours, and was disconcerted by marks of general admiration. But, though he loved retirement and contemplation; though he was of a thoughtful and somewhat melancholy temper; and though he felt not that anxiety for paltry distinctions or trivial testimonies of honour which harassed the morbid mind of Tasso, it seems to be a mistaken idea that he was indifferent to glory, as Donatus and Asconius Pedianus have asserted. He was evidently fond of fame, and desirous to obtain the applause of his contemporaries. And while he shunned the vulgar gaze and shrunk from the pressure of the multitude, he was not, in the hours of retirement, without that proud exultation of spirit, that consciousness of high intellectual endowments and strong imaginative powers, which announced to him that he was called to immortality, and destined to confer immortality on his country.—It has already been remarked, that, in his pastoral poetry, Virgil was the professed imitator of Theocritus: his images, indeed, are all Greek, and his scenery such as he found painted in the pages of the Sicilian poet, and not what he had himself observed on the banks of the Mincius. Yet, with all this imitation and resemblance, the productions of the two poets are widely different. Thus, the delineations of character in Theocritus are more varied and lively. His Idyls exhibit a gallery of portraits which entertains by its variety or delights by its truth; and in which every rural figure is so distinctly drawn, that it stands out, as it were, from the canvass, in a defined and certain form. But that want of discrimination of character, which has been so frequently remarked in the *Æneid*, is also observable in the pastorals of Virgil. His Thyrsis, Daphnis, and Menalcas resemble each other. No shepherd is distinguished by any peculiar disposition or humour; they all speak from the lips of the poet, and their dialogue is modelled by the standard of his own elegant mind. A difference is likewise observable in the scenes and descriptions. Those of Theocritus possess that minuteness and accuracy so conducive to poetic truth and reality; Virgil's representations are more general, and bring only vague images before the fancy. In the Idyls of Theocritus we find a rural, romantic wildness of thought, and the most pleasing descriptions of simple, unadorned nature, heightened by the charm of the Doric dialect. But Virgil, in borrowing his images and sentiments, has seldom drawn an idea from his Sicilian master without beautifying it by the lustre of his language. The chief merit, however, of Virgil's imitations lies in his judicious selections. Theocritus's sketches of manners are often coarse and unpleasing; and his most beautiful descriptions are almost always too crowded. But Virgil refined whatever was gross, and threw aside all that was overloaded or superfluous. He made his shepherds more cultivated than even those of his own time. He represented them with some of the features which are supposed to have belonged to the swains in the early ages of the world, when they were possessed of great flocks and herds, and had acquired a knowledge of astronomy, cosmogony, and music; when the pastoral life, in short, appeared perfection, and nature had lavished all her stores to render the shepherd hap-

py.—Thus much for the pastoral poetry of Virgil. We come next to the Georgics. This poem, which is in four books, derives its title from the Greek *Γεωργικά*, which last is compounded of *γῆ* (*γῆ*), "*the earth*," and *ἔργον*, "*labour*." The subject is husbandry in general. The poem of the Georgics is as remarkable for majesty and magnificence of diction, as the Eclogues are for sweetness and harmony of versification. It is the most complete, elaborate, and finished poem in the Latin, or perhaps in any language; and, though the choice of subject and the situations afforded less expectation of success than the pastorals, so much has been achieved by art and genius, that the author has chiefly exhibited himself as a poet on topics where it was difficult to appear as such. Rome, from its local situation, was not well adapted for commerce: and, from the time of Romulus to that of Cæsar, agriculture had been the chief care of the Romans. Its operations were conducted by the greatest statesmen, and its precepts inculcated by the profoundest scholars. The long continuance, however, and fatal ravages of the civil wars, had now occasioned an almost general desolation. Italy was, in a great measure, depopulated of its husbandmen. The soldiers, by whom the lands were newly occupied, had too long ravished the fields to think of cultivating them; and, in consequence of the farms lying waste, a famine and insurrection had nearly ensued. (*Georg.* 1, 606.) In these circumstances, Mæcenas resolved, if possible, to revive the decayed spirit of agriculture, to recall the lost habits of peaceful industry, and to make rural improvement, as it had been in former times, the prevailing amusement among the great: and he wisely judged, that no method was so likely to contribute to these important objects as a recommendation of agriculture by all the insinuating charms of poetry. At his suggestion, accordingly, Virgil commenced his *Georgics*, which were thus, in some degree, undertaken from a political motive, and with a view to promote the welfare of his country; and, as in the eclogue which announces the return of the golden age, he strove to render his woods worthy of a consul, so, in his Georgics, he studied to make his fields deserving of Mæcenas and Augustus. But, though written with a patriotic object, by order of a Roman statesman, and on a subject peculiarly Roman, the imitative spirit of Latin poetry still prevailed, and the author could not avoid recurring, even in his Georgics, to a Grecian model. A few verses on the signs and prognostics of the weather have been translated from the *Phænomena* of Aratus. But the *Works and Days* of Hesiod is the pattern which he has chiefly held in view. In reference to his imitation of this model, he himself styles his Georgics an *Æscæan* poem; and he appears, indeed, to have been a sincere admirer of the ancient bard. In the *Works and Days*, Hesiod, after a description of the successive ages of the world, points out the means for procuring an honest livelihood. Of these the proper exercise of agriculture is one of the principal. He accordingly gives directions for the labours of the field, and enumerates those days on which the various operations of husbandry ought to be performed. It is chiefly, then, in the first and second books of the Georgics (where Virgil discourses on tillage and planting) that he has imitated the *Works and Days*. Hesiod has not treated of the breeding of cattle or care of bees, which form the subjects of the third and fourth books of the Roman poet. But in the former books he has copied his predecessor in some of his most minute precepts of agriculture, as well as in his injunctions with regard to the superstitious observance of days. Virgil's arrangement of his topics is at once the most natural, and that which best carries his reader along with him. He begins with the preparation of the inert mass of earth and the sowing of grain, which form the most intractable part of his sub-

ject. Then he discloses to our view a more open prospect and a wider horizon, leading us among the rich and diversified scenes of nature, the shades of vineyards, and blossoms of orchards. He next presents us with pictures of joyous and animated existence. The useful herds, the courageous horse, the Nomades of Africa and Scythia pass before us, and the fancy is excited by images of the whole moving creation. He at length concludes with those insects which have formed themselves into a well-ordered community, and which, in their nature, laws, and government, seem most nearly to approach the human species. Many of Virgil's rules, particularly those concerning the care of cattle, have been taken from the works of the ancient agricultural writers of his own country. Seneca, indeed, talks lightly of the accuracy and value of his precepts. But Columella speaks of him as an agricultural oracle ("verissimo vati velut oraculo crediderimus"); and all modern travellers, who have had occasion to examine the mode of agriculture even at this day practised in Italy, bear testimony to his exactness in the minutest particulars. His precepts of the most sordid and trivial descriptions are delivered with dignity, and the most common observations have received novelty or importance by poetic embellishment. It is thus that he contrives, by converting rules into images, to give a picturesque colouring or illustration to the most unpromising topics, to scatter roses amid his fields, and to cover, as it were, with verdure the thorns and briars of agricultural discussion. This talent of expressing with elegance what is trifling and in itself little attractive, is one of the most difficult arts of poetry, and no one was better acquainted with it than Virgil. But, though he has inculcated his precepts with as much clearness, elegance, and dignity as the nature of the subject admits, and even in this respect has greatly improved on Hesiod, still it is not on these precepts that the chief beauty of the Georgics depends. With the various discussions on corn, vines, cattle, and bees, he has interwoven every philosophical, moral, or mythological episode on which he could with propriety seize. In all didactic poems the episodes are the chief embellishments. The noblest passages of Lucretius are those in which he so sincerely paints the charms of virtue, and the delights of moderation and contentment. In like manner, the finest verses of Virgil are his invocations to the gods, his addresses to Augustus, his account of the prodigies before the death of Cæsar, and his description of Italy. How beautiful and refreshing are his praises of a country life! how solemn and majestic his encomiums on the sage who had triumphed, as it were, over the powers of destiny; who had shut his ears to the murmurs of Acheron, and dispelled from his imagination those invisible and inaudible phantoms which wander on the other side of death! In these and many other passages, it is evident that Virgil contends with Lucretius, and strives hard to surpass him. There is a close resemblance in the topics on which these two poets descend, but a wide difference between them in tone and manner. Lucretius is more bold and simple than his successor, and displays more of the *vivida vis animi*; but his outlines are harder, and we never find in Virgil any of those rugged verses or unpolished expressions which we so frequently encounter in Lucretius. In the theological parts, and those which relate to a state of future existence, Lucretius assumes, as it were, a tone of defiance, while Virgil is more calm, contemplative, and resigned. As the works of Virgil were never completely forgotten during the dark ages, or, at all events, were the first classical productions which were brought to light or studied at the revival of literature, we find imitations of the Georgics in the earliest poets who appeared after that period. The "*Rusticus*" of Politian, "in *Virgilii Georgicis enarrationes pronuntiata*," is an

abridgment of the subject of that poem, and several passages are nearly copied from it. Of other modern Latin poems which have been written in imitation of the Georgics, Vaniere's *Prædium Rusticum* approaches nearest to it in the subject; but it is a tedious and languid production. The Italian poem of Alamanni, in six books, entitled "*Della Coltivazione*," enlarges on the various topics discussed in the first three books of Virgil; while Rucellai, the countryman and contemporary of Alamanni, has, in his poem *Le Api*, nearly translated the fourth book, omitting, however, the fable of Aristæus. Both these poems, in *versi sciolti*, are written with much elegance and purity of style, and contain many passages which might bear a comparison with the most celebrated parts of that immortal work on which they were modelled. A few lines in the fourth book have also given to Rapsin the hint for his Latin poem, *Horti*; but, as Addison has remarked, "there is more pleasantness in the little platform of a garden which Virgil gives us, than in all the spacious walks and waterworks of Rapsin." The same subject has been enlarged on by Delille, who was a translator and enthusiastic admirer of Virgil, and has borrowed from him some of the finest passages, both in *Les Jardins*, and his other poem, *L'Homme des Champs*, which may be considered as a continuation of the Georgics, by adding a moral part to the Latin poem. St. Lambert, in his *Saisons*, and Roucher, in his *Mois*, have also frequently availed themselves of the Georgics. It is impossible here to point out particular imitations; but it may be observed of these poems in general, that they are vague and diffuse, and never reach that pregnant brevity of style by which their great original is distinguished. It has been remarked by Wharton, that, of all our English poems, "Philip's *Cider*," which is a close imitation of the Georgics, conveys to us the fullest idea of Virgil's manner, whom he has exactly followed in conciseness of style, in throwing in frequent moral reflections, in varying the method of giving his precepts, in his digressions, and in his happy address in returning again to his subject; in his knowledge, and love of philosophy, medicine, agriculture, and antiquity, and in a certain primeval simplicity of manners, which is so conspicuous in both." But no English poet has been so much indebted to Virgil for his fame as Thomson: In his *Seasons* he sometimes assembles together different passages from the Georgics, and sometimes scatters verses belonging to the same passage through different parts of his own production, but at other times he translates straightforward. In his *Spring*, though Lucretius has contributed a share, he has closely imitated from Virgil the description of the golden age, and of the desires which the early season excites among the brute creation. From the same source he has borrowed, in his *Summer*, many circumstances of the thunder-storm, and the panegyric on Great Britain, which is parodied from the praises of Italy. The eulogy which he introduces in his *Autumn* on a philosophical life may be cited as an example of the closeness with which, on some occasions, he imitates the Latin poet.—The *Æneis* next claims our attention. It has for its subject the settlement of the Trojans in Italy. This production belongs to a nobler class of poetry than the Georgics, and is, perhaps, equally perfect in its kind. It ranks, indeed, in the very highest order, and it was in this exalted species that Virgil was most fitted to excel. Undisturbed by excess of passion, and never hurried away by the current of ideas, he calmly consigned to immortal verse the scenes which his fancy had first painted as lovely, and which his understanding had afterward approved. The extent, too, and depth of the design proposed in the *Æneid*, rendered this subjection to the judgment indispensable. It would be absurd to suppose, with some critics, that Virgil intended to give instruction to princes in the art

of settling colonies (*Catrou, Œuvres de Virgile*, vol. 3, p. 486), or to supply Augustus with political rules for the government and legislation of a great empire; but he evidently designed, not merely to deduce the descent of Augustus and the Romans from Æneas and his companions, but, by creating a perfect character in his hero, to shadow out the eminent qualities of his imperial patron; to recommend his virtues to his countrymen, who would readily apply to him the amiable portrait; and perhaps to suggest, that he was the ruler of the world announced of old by the prophecies and oracles of the Sæturnian land. (*Æn.*, 6, 789, *seqq.*) No one who has read the *Æneid*, and studied the historical character of Augustus, or the early events of his reign, can doubt that Æneas is an allegorical representation of that emperor.—The chief objection which critics in all ages have urged against the *Æneid*, or, at least, against the poetical character of its author, is the defect in what forms the most essential quality of a poet, originality and the power of invention. It has never, indeed, been denied that he possessed a species of invention, if it may be so called, which consists in placing ideas that have been preoccupied in a new light, or presenting assemblages, which have been already exhibited, in a new point of view. Nor has it been disputed that he often succeeds in bestowing on them the charm of novelty, by the power of more perfect diction, and by that poetic touch which transmutes whatever it lights on into gold. But it is alleged that he has contrived few incidents, and opened up no new veins of thought. It is well known that the Roman dramatic writers, instead of contriving plots of their own, translated the master-pieces of Sophocles, Euripides, and Menander. The same imitative spirit naturally enough prevailed in the first attempts at Epic poetry. When any beautiful model exists in an art, it so engrosses and intimidates the mind, that we are apt to think that, in order to execute successfully any work of a similar description, the approved prototype must be imitated. It is supposed that what had pleased once must please always; and circumstances, in themselves unimportant, or perhaps accidental, are converted into general and immutable rules. It was natural, then, for the Romans, struck with admiration at the sublime and beautiful productions of the epic muse of Greece, to follow her lessons with servility. The mind of Virgil also led him to imitation. His excellence lay in the propriety, beauty, and majesty of his poetical character, in his judicious contrivance of composition, his correctness of drawing, his purity of taste, his artful adaptation of the conceptions of others to his own purposes, and his skill in the combination of materials. Accordingly, when Virgil first applied himself to frame a poem, which might celebrate his imperial master, and emulate the productions of Greece, in a department of poetry wherein she was as yet unrivalled, he first naturally bent a reverent eye on Homer; and, though he differed widely from his Grecian master in the qualities of his mind and genius, he became his most strict and devoted disciple. The Latin dramatists, in preparing their pieces for the stage, had frequently compounded them of the plots of two Greek plays, melted, as it were, into one; and thus compensated for the want of invention and severe simplicity of composition by greater richness and variety of incident. From their example, Virgil comprehended in his plan the arguments both of the *Iliad* and *Odyssey*; the one serving him as a guide for the wanderings and adventures of his hero previous to the landing in Latium, and the other as a model for the wars which he sustained in Italy, to gain his destined bride Lavinia. He had thus before him all the beauties and defects of Homer, as lights to gaze at and as rocks to be shunned, with the judgment of ages on both, as a chart which might conduct him to yet greater perfection. In the *Iliad*, however, there was this superior-

ity, that a sense of injury (easily communicated to the reader) existed among the Greeks; and in the *Odyssey*, we feel, as it were, the hero's desire of returning to his native country. But both these ruling principles of action are wanting in the *Æneid*, where the Trojans rather inflict than sustain injury, and reluctantly seek a settlement in new and unknown lands.—Besides the well-known and authentic works of Virgil that have now been enumerated, several poems still exist which are very generally ascribed to him, but which, from their inferiority, are supposed to be the productions of his early youth. Of these, the longest is the *Culex*, which has been translated by Spenser under the title of *Virgil's Gnat*. There can be no doubt, from two epigrams of Martial (8, 86; 14, 185), that there was a poem called *Culex* which had been written by Virgil. But it may be questioned if the *Culex* to which Martial alludes be the same with the poem under that name which we now possess. The *Culex*, which still appears in some of the editions of Virgil, is not without passages of considerable merit; but it exhibits few marks of the taste and judgment of the Mantuan bard. A compressed and pregnant brevity is one of the chief characteristics of that great poet's genuine works; but the *Culex*, as we now have it, is overloaded and diffuse, every thought and description being spun out through as many lines as possible. Those critics who contend for the authenticity of the *Culex*, account for this redundancy by supposing that it was the first, and, indeed, a boyish production of its illustrious author. The *Culex*, however, which Virgil wrote, had no claim to such an excuse. For Statius mentions, in his *Genethliakon* of Lucan, that the Pharsalia of that poet had been completed by him before the age at which Virgil wrote the *Culex*. Now the Pharsalia was finished when Lucan was twenty-six; so that, according to Statius, the *Culex* could not have been written till after Virgil had attained that age, and ought, consequently, to have been as perfect in point of composition as his earliest eclogues. The probability therefore is, that the subject was of Virgil's invention, and that some of the verses are truly Virgilian, but that the poem had been lengthened out and interpolated by the transcribers of the middle ages. The subject of the *Culex* may be considered as partly pastoral and partly mock-heroic; but the mockery is of a gentle and delicate description, and much real beauty and tenderness break out amid the assumed solemnity. A goatherd leads out his flocks to feed upon the pastures near Mount Cithæron. Having fallen asleep, he is suddenly roused from his slumbers by the bite of a gnat; and, while awakening, he crushes to death the insect which had inflicted the wound. He then perceives a huge serpent approaching, which, if his sleep had not been broken, would inevitably have destroyed him. The shade of the goat appears to the shepherd on the following night, and reproaches him with having occasioned its death at the moment when it had saved his life. The insect describes all that it had seen in the infernal regions during its wanderings, having as yet obtained no fixed habitation. Next day the shepherd prepares a tomb, in order to procure repose for the ghost of his benefactor, and celebrates in due form its funeral obsequies. By far the finest, and probably the most genuine, passage of the poem is that near the beginning, in which the author describes the goatherd leading out his flocks to their pasture, and in which he descants on the pleasures of a country life. As amended by Heyne, and cleared from the interpolations of the scholiasts, we may find in it the germe of those flowers of song which afterward expanded to such maturity and perfection in the *Georgics*.—The *Ciris*, a poem of the same doubtful authenticity with the *Culex*, and which some commentators have attributed to Cornelius Gallus, records the well-known mythological fable of Scylla, daughter of Niobe, and her

transformation into the bird called *Ciris*, from which the poem derives its title. That part which is introductory to the complaint of *Scylla* is not very clear in language or lofty in point of conception. The lamentation itself is as good as might be expected, considering the position in which it was uttered, *Minos* having, on his voyage home, fastened her to the side of his vessel, and thus dragged her along through the sea. Some of the lines are palpable imitations of the soliloquy of *Ariadne* in *Catullus*. Perhaps the best passage is one in which that poet has also been closely imitated, describing the effects of ungovernable love in the breast of *Scylla*. From the *Ciris*, *Spenser*, who had translated the *Culex*, imitated a long passage, which constitutes part of the *Legend of Britomart*, in the third book of the *Fairy Queen*.—The *Moretum* would certainly be a curious and interesting production, could it be authenticated as the work of *Virgil* or *Septimius Serenus*, to whom *Wernsdorff* has ascribed it, and who flourished at Rome during the reigns of the Flavian family. Its subject is one concerning which few relics have descended to us from antiquity. It gives an account of the occupations and daily life of an Italian peasant; and, so far as it goes, everything is related with the greatest minuteness; but the employments only of the morning are recorded. The peasant *Samulus* rises with the dawn. He gathers together the ashes of the yesterday's fire. He then bakes some bread; and, with the assistance of an African freed-woman named *Cybele*, he prepares a sort of food called *Moretum*, which gives name to the poem, and was chiefly composed of herbs culled from his garden. This introduces a curious description of a peasant's kitchen-garden, and the sort of plants which were reared in it. The poem concludes with the peasant's yoking his oxen, and beginning to plough his field. It is probable, however, that what is now extant is only a fragment at the commencement of the *Moretum*, or the first of a series of rustic eclogues, in which the avocations of a peasant were described in succession through the whole day. The *Copa* merely contains an invitation from an hostess, who was a native of Syria, to pass the hours merrily in a place of entertainment which she kept beyond the gates of Rome; but a good-humoured drinking-song by the majestic author of the *Georgics* and *Æneid* is in itself a curiosity.—The best edition of *Virgil* is that of *Hayne*, which first appeared from the Leipzig press in 1787-68, 4 vols. 8vo. It has been often reprinted: the most complete is that with the additions of *Wagner*, *Lips.*, 1831. The edition of *Forbiger*, *Lips.*, 1826-9, 3 vols. 8vo, is also a very useful one. (*Dunlop's Roman Literature*, vol. 3, p. 68, *seqq.*)

VIRGINIA, a daughter of the centurion *L. Virginus*. The maiden had been betrothed to *L. Icilius*, one of the tribunes, and the author of the law known by his name. Her beauty, however, inflamed the passions of *Appius Claudius*, the decemvir, and he caused one of his clients, *M. Claudius*, to seize her as his slave, intending in this manner to get the person of the damsel within his power. Intelligence was immediately sent to the camp to *Virginius*, who, obtaining leave of absence, hastened to Rome to protect his daughter. But in vain did he claim his child; in vain appeal to the sympathy of the people; in vain address himself to the better mind of *Appius*. The decemvir, blind to everything but the beauty of *Virginia*, and deaf to all but the impulse of his own passion, passed sentence, assigning the maiden to *Claudius*. Upon this, *Virginius*, snatching up a butcher's knife, exclaimed, "This is the only way left, my child, to keep thee free and unstained!" and plunged it into her heart; then, turning to *Appius*, he cried, "On thee and on thy head be the curse of this innocent blood!" *Appius* ordered him to be seized, but in vain. Waving aloft the bloody knife, he burst through the multitude, flew to the

gates, mounted a horse, and spurred headlong to the camp near *Tusculum*. The wild and frantic aspect of *Virginius*, his attire stained with blood, and the bloody knife still held convulsively in his grasp, instantly drew a crowd of the soldiery around him. In brief but burning terms he told his tale, and called aloud for vengeance. One thrilling sentiment of sympathizing indignation filled every bosom; they called to arms, plucked up their standards, and, marching to Rome, seized upon the *Aventine*. The army near *Fidenæ* caught a similar spirit, having received information of the bloody tragedy from *Icilius*. They, in like manner, threw off the authority of their commanders, chose military tribunes to lead them, and, hastening to Rome, joined their brethren on the *Aventine Hill*. In the city all was tumult and terror. The decemvirs were unable to make head against the excited multitude, and the senate itself felt its power ineffectual to allay the tempest. They began to treat with the people and the army, yet with dilatoriness, hoping the ferment would soon abate, and they might still retain their power. But the people were in earnest. Leaving a strong body to defend the *Aventine* for the present, they marched in military array through the city, and once more posted themselves on the sacred mount, followed by vast numbers of the plebeian party, men, women, and children. Then were the patricians compelled to yield, and the decemvirs resigned. (*Vid. Appius*, and *Decemviri*.)

VIRGINIUS, the father of *Virginia*, made tribune of the people after the affair of his daughter. (*Vid. Virginia*.)

VIRIATHUS, a shepherd of *Lusitania*, a hunter, a robber, and finally a military hero, almost unrivalled in fertility of resources under defeat, skill in the conduct of his forces, and courage in the hour of battle. Like the guerilla leaders of modern times, he knew how to avail himself of the wild chivalry of his countrymen, and the almost impenetrable fastnesses of his country; but, superior to them, he was equally able to guide a troop and to marshal an army. Six years did he maintain the contest; and at length the consul *Cæpio*, unable to subdue him in the field, procured his assassination. The *Lusitanians*, deprived of their brave leader, were soon afterward completely subdued, B.C. 40 (*Flor.*, 2, 17.—*Val. Max.*, 6, 4.)

VISURATA, a river of Germany, now the *Weser*, and falling into the German Ocean. (*Vell. Patere.*, 2, 105.—*Tac.*, *Ann.*, 1, 70.)

VISTULA, a river falling into the Baltic, the eastern boundary of ancient Germany, now the *Vistula*, or, as the Germans write the word, the *Weichsel*. (*Mela*, 3, 4.—*Plin.*, 4, 12.—*Amm. Marc.*, 38, 8.)

VITELLIUS, *I. AVULUS*, a Roman emperor, who came after *Otho*. He was descended from one of the most illustrious families of Rome, and, as such, he gained an easy admission to the palace of the emperors. The greatest part of his youth was spent at *Capræ*, where his willingness to gratify the most vicious propensities of *Tiberius* raised his father to the dignity of consul and governor of Syria. The applause he gained in this school of debauchery was too great and flattering to induce *Vitellius* to alter his conduct, and no longer to be one of the votaries of vice. *Caligula* was pleased with his skill in driving a chariot; *Claudius* loved him because he was a great gamester; and he recommended himself to the favours of *Nero* by wishing him to sing publicly in the crowded theatre. With such an insinuating disposition, it is not to be wondered that *Vitellius* became so great. He did not fall with his patrons, like the other favourites; but the death of an emperor seemed to raise him to greater honours, and to procure him fresh applause. He passed through all the offices of the state, and gained the soldiery by donations and liberal promises. He was at the head of the Roman legions in Germany when *Otho* was pro-

claimed emperor, and the exaltation of his rival was no sooner heard in the camp, than he was likewise invested with the purple by his soldiers. He accepted with pleasure the dangerous office, and instantly marched against Otho. Three battles were fought, and in all Vitellius was conquered. A fourth, however, in the plains between Mantua and Cremona, left him master of the field and of the Roman empire. Vitellius began his reign by endeavouring to conciliate the favour of the populace and the troops by large donations and expensive amusements. He then gave a loose rein to his own debasing appetites, of which the chief was absolute gluttony of the very grossest kind. It is almost incredible, though stated by historians, that in less than four months he expended on the mere luxuries of the table a sum equal to about seven millions sterling. This bloated and pampered ruler was soon regarded by all his subjects with contempt and disgust. The unrestrained licentiousness of the soldiery tended equally to make his reign hated and feared by all who were exposed to the insults and outrages in which they indulged. To supply the funds necessary for the maintenance of his excessive luxury, he resorted to the too prevalent custom of listening to the accusations of spies, and putting to death all such accused persons, that he might seize upon their property. While thus wallowing in the indulgence of the most debasing appetites, Vitellius was startled by tidings of a very alarming nature. Vespasian, who had been sent to take the command of the army in Syria in the Jewish war, and had been detained there by the desperate resistance of the Jews, had sent his own son Titus to offer his allegiance to Galba. But, before his arrival, Galba was dead, and Otho and Vitellius were contending for the empire. Titus returned to his father for instructions; and, though Vespasian appeared ready to acknowledge Vitellius, his own troops were eager to raise him to the sovereignty. Being at length prevailed on to comply with the wishes of the army, he commenced his march towards Europe. The Illyrian and Pannonian armies immediately declared in his favour; and that of Illyricum, under the command of Antonius Primus, crossed the Alps and marched towards Rome to dethrone Vitellius. The Vitellian army, commanded by Cæcina, encountered that of Antonius near Cremona, but was defeated with great loss, and the city was taken. Antonius continued to advance on Rome, and crossed the passes of the Apennines while the emperor was hastening to secure them. Vitellius fled to Rome, which was soon invested by the victorious army of Antonius. An insurrectionary tumult arose in the city itself, during which the Capitol was burned to the ground, and Sabinus, the brother of Vespasian, was killed. The troops of Antonius at length forced an entrance into the city, stormed the quarters of the prætorian guards, and put those turbulent bands to the sword. Vitellius endeavoured to conceal himself, but was discovered, dragged through the streets to the place of punishment for common malefactors, put to death in the most ignominious manner, and his mangled carcass cast into the Tiber amid the execrations of the multitude. Eight months and five days had this despicable wretch seemed to sway the sceptre of supreme dominion, when thus overtaken by the due reward of his debauchery and crimes. (*Hetherington's History of Rome*, p. 185, *seqq.*)

VITRUVIUS POLLIO, M., a celebrated writer on architecture, born at Verona, and contemporary with Julius Cæsar and Augustus. Some, as, for example, Newton, his English translator, have placed him in the reign of Titus, but they have been refuted by Hirt, the author of an elaborate history of ancient architecture (*Geschichte der Baukunst bei den alten, Berlin*, 1822, 2 vols. 4to), at the end of his dissertation on the Pantheon. (Compare Schöll, *Hist. Lit. Rom.*, vol.

3, p. 189, *seqq.*, in *notis*.) Under Augustus, who, during the civil contest, had employed him in the construction of military engines, he was appointed inspector of public buildings; and it was at the request of this prince, and availing himself as well of the Greek works already written on that subject, as of the result of his own experience, that Vitruvius published his work on Architecture. It is in ten books. The first seven treat of architecture, in its proper sense; the last three of hydraulic architecture, gnomonics, and mechanics. The style of Vitruvius is unostentatious, concise, and sometimes obscure. Its obscurity, however, is owing to the fact of Vitruvius having been the first Roman who wrote on the subject of architecture, and his using, in consequence, new terms and forms of expression to convey the meaning which he intends. The best edition is that of Schneider, *Lips.*, 1807, in 3 vols. 8vo. It is to be regretted that the plans which originally accompanied the work of Vitruvius are lost to us. (The following works may be consulted with advantage in relation to Vitruvius: *Hirt, Geschichte, &c.*, already referred to.—*Stieglitz, Archæologie der Baukunst, Weimar*, 1801.—*Genelli, Briefe über Vitruv.*, Braunschw. und Berlin, 1802.—*Rösch, Erläuterungen zu Vitruv's Baukunst, Stuttg.*, 1802.—*Stieglitz archæolog. unterhalt.*, 1 Abth., *Leipz.*, 1820.)

ULPIA TRAJANA, a city of Dacia, the residence of Decebalus. It was taken by Trajan, and called by his name. Its previous appellation appears to have been Sarmizegetusa. The modern name is *Varhely* or *Varhel*. (*Inscript.*, *ap. Grut.*—*Inscript.*, *ap. Zamos. Analect.*, 5.)

ULPIANUM, I. a town of upper Messia, said by Procopius to have been repaired and embellished by Justinian, and called Justiniana Secunda. It is now *Gustendil*. (*Procop.*, B. G., 4, 25.)—II. One of the principal towns of Dacia, now perhaps *Kolover*.

ULPIANUS DOMITIUS, one of those who have conferred the greatest honour on Roman jurisprudence, was born at Tyre. Under Septimius Severus he became the colleague of Sextus Pomponius in the judicial stations which he filled. He continued to discharge these same official duties under Caracalla and Macrinus, but was sent into exile after the death of Heliogabalus. Alexander Severus recalled him, made him one of his council, and treated him with the greatest regard. He appointed him, also, prætorian prefect. In this post he rendered himself odious to the soldiery, who complained that he wished to abridge the privileges which they had enjoyed under Heliogabalus. They frequently demanded his death; and on one occasion, the emperor, to save him, covered him with his purple. Ulpian, however, was at last massacred by them, almost in the very arms of the emperor, to whom he had fled for refuge. The people took up arms to defend him, and a violent contest arose, which lasted during three days. Ulpian wrote the most works of any Roman jurist: we have the titles of more than thirty of his productions, among which was a digest in forty-eight books; a commentary on the *Edictum Perpetuum*, in eighty-three; and another on the *Lex Julia Papia*, in twenty. Of all these works there remain twenty-nine chapters of that entitled *Regula Juris*, and which consisted of seven books. They were inserted in the abridgment of the Roman law made by order of Alaric. We have also his commentaries in Greek on Demosthenes. The heathen writers have concurred in their eulogy of Ulpian, but the Christians have reproached him for inciting the emperor to a persecution of their sect. (*Schöll, Hist. Lit. Rom.*, vol. 3, p. 228, *seqq.*—*Bähr, Gesch. der Röm. Lit.*, p. 560.)

ULTRAJE, a small town of Latium, at no great distance, probably, from Velitra. Its marshy situation is plainly alluded to by Cicero, who calls the inhabitants *little frogs*. (*Ep. ad Fam.*, 7, 18.) Horace

and Juvenal give us but a wretched idea of the place. (*Horat.*, Ep., 1, 11, 30. — *Juv.*, 10, 101. — *Cramer's Anc. Italy*, vol. 2, p. 85.)

Ulysses, a king of Ithaca, son of Anticles and Laertes, or, according to some, of Sisyphus. (*Vid.* Sisyphus, and Anticles.) He became, like the other princes of Greece, one of the suitors of Helen; but, as he despaired of success in his application on account of the great number of his competitors, he solicited the hand of Penelope, the daughter of Icarius. Tyndarus, the father of Helen, favoured the addresses of Ulysses, as by him he was directed to choose one of his daughter's suitors without offending the others, and to bind them all by a solemn oath that they would unite together in protecting Helen if any violence were ever offered to her person. Ulysses had no sooner obtained the hand of Penelope than he returned to Ithaca, where his father resigned him the crown, and retired to peace and rural solitude. The abduction of Helen, however, by Paris, did not long permit him to remain in his kingdom; and as he was bound, in common with the rest, to defend her against every intruder, he was summoned to the war with the other princes of Greece. Pretending to be insane, not to leave his beloved Penelope, he yoked a horse and a bull together, and ploughed the seashore, where he sowed salt instead of grain. The artifice, however, was soon detected; and Palamedes, by placing before the plough of Ulysses his infant son Telemachus, convinced the world that the father was not insane, who had the foresight to turn away the plough from the furrow, not to hurt his child. Ulysses was therefore obliged to go to the war; but he did not forget him who had exposed his pretended insanity. (*Vid.* Palamedes.) During the Trojan war, the King of Ithaca distinguished himself by his prudence and sagacity as well as by his valour. By his means Achilles was discovered among the daughters of Lycomedes, king of Scyros (*vid.* Achilles); and Philoctetes was induced to abandon Lemnos, and to come to the Trojan war with the arrows of Hercules. (*Vid.* Philoctetes.) With the assistance of Diomedes he slew Rhesus, and destroyed many of the sleeping Thracians in the midst of their camp (*vid.* Rhesus, and Dolon); and, in conjunction with the same warrior, he carried off the Palladium of Troy. (*Vid.* Palladium, where, however, other accounts are given.) These, as well as other services, obtained for him the armour of Achilles, which Ajax had disputed with him. After the Trojan war Ulysses embarked on board his ships to return to Greece, but he was exposed to a number of misfortunes before he reached his native country: he was thrown by the winds upon the coasts of Africa, and visited the country of the Lotophagi (*vid.* Lotophagi), and afterward that of the Cyclopes, where his adventure in the cave of Polyphemus occurred. (*Vid.* Cyclopes, and Polyphemus.) He came next, in the course of his wanderings, to the island of Æolus, monarch of the winds, who gave him, tied up in a bag of ox-hide, all the winds which could obstruct his return to Ithaca; but the curiosity of his companions to know what the bag contained proved nearly fatal. The winds rushed out, and hurried them back to Æolia; the king of which, judging, from what had befallen them, that they were hated by the gods, drove them with reproaches from his isle. Thence he was carried to the land of the Læstrygonians (*vid.* Læstrygonians), where he lost all his vessels except the one in which he himself was; and, on escaping from this gigantic and cannibal race, he came to the island of Ææa, the abode of Circe. After dwelling here for an entire year, the warrior and his companions were anxious to depart; but the goddess told the hero that he must previously cross the ocean, and enter the abode of Hades, to consult the blind prophet Tiresias. Accordingly, they left

Ææa rather late in the day, as it would appear, and, impelled by a favouring north wind, their ship reached by sunset the opposite coast of ocean, the land of perpetual gloom. Ulysses obeyed the directions of the goddess in digging a small pit, into which he poured mules, wine, water, flour, and the blood of the victims. The dead came trooping out of the abode of Hades, and Ulysses there saw the heroines of former days, and conversed with the shades of Agamemnon and Achilles. Terror at length came over him; he hastened back to his ship; the stream carried it along, and they reached Ææa while it was yet night. Leaving Ææa on their homeward voyage, Ulysses and his companions came to the islands of the Sirens (*vid.* Sirenes), and, after having escaped from these, and shunned the Wandering Rocks, they reached the terrific Scylla and Charybdis. (*Vid.* Scylla and Charybdis.) As he sailed by Scylla, Ulysses saw six of his followers seized and devoured by the monster, after which he came to Thrinakia, the island of the sun-god. (*Vid.* Thrinakia.) Here his companions sacrilegiously fed upon the sacred herds, and were punished immediately after their departure. No sooner had they lost sight of land than a violent storm arose; their vessel was struck by a thunderbolt; it went to pieces, and all were drowned except Ulysses. When his ship had been thus destroyed, he fastened the mast and keel together, and placed himself upon them. The wind, changing to the south, carried him back to Scylla and Charybdis. As he came by the latter, she absorbed the mast and keel; but the hero caught hold of a wild fig-tree that grew on the rock above, and held by it till they were thrown out again. He then floated along for nine days, and on the tenth reached Ogygia, the isle of Calypso. After eight years' residence with this ocean-nymph (*vid.* Calypso), Ulysses resumed his wanderings on a raft of his own construction; and he had already come in sight of the island of the Phæacians (*vid.* Phæacia), when Neptune, still mindful that his son Polyphemus had been deprived of sight by means of the King of Ithaca, raised a storm and sunk his raft. He was carried along, after this, as he swam, by a strong northerly wind for two days and nights, and on the third day landed on the island of Phæacia, where he was kindly received by King Alcinous and his daughter Nausicaa. Here he recited the narrative of his adventures, and after this he was conveyed in a Phæacian vessel to the shore of Ithaca. He had been absent twenty years, and he found, on his return, his palace beset by numerous suitors for the hand of Penelope, who were indulging day after day in riotous carousals, and wasting the resources of the monarch of Ithaca. Disguising himself as a beggar, Ulysses made himself known merely to his son Telemachus and his faithful herdsman Eumæus. With them he concerted measures to re-establish himself on his throne. These measures were crowned with success. The suitors were all slain, and Ulysses was restored to the bosom of his family. (*Vid.* Laertes, Penelope, Telemachus, Eumæus.) He lived about sixteen years after his return, and was at last killed by his son Telegonus, who had landed in Ithaca with the hope of making himself known to his father. This unfortunate event had been foretold to him by Tiresias, who assured him that he should die by the violence of something that was to issue from the bosom of the sea. (*Vid.* Telegonus.) The adventures of Ulysses, on his return from the Trojan war, form the subject of Homer's *Odyssey*. (*Keightley's Mythology*, p. 259, *seqq.*)

UMBRIA, a country of Italy, to the east of Etruria and north of the Sabine territory. The Latin writers were evidently acquainted with no people of Italy more ancient than the Umbri (compare *Florus*, 1, 17. — *Plin.*, 3, 14), and Dionysius of Halicarnassus assures us that they were one of the oldest and most nu-

maisons nations of the land (1, 19). From his account, as well as from Herodotus (1, 94), it would appear that the Umbri were already settled in Italy long before the arrival of the Tyrrhenian colony. To the Greeks they were known under the name of *Ουμπριοί*, a word which they supposed to be derived from *ὀυδρος*, under the idea that they were a people saved from an unusual deluge. (*Plin.*, l. c.—*Solin.*, 5.) Dionysius has farther acquainted us with some particulars respecting the Umbri, which he derived from Zenodotus, a Greek of Trozene, who had written a history of this people. This author appears to have considered the Umbri an indigenous race, whose primary seat was the country around Reate, a district which, according to Dionysius, was formerly occupied by the Aborigines. Zenodotus was also of opinion that the Sabines were descended from the Umbri. Connected with the origin of the ancient Umbri, there is another question not unworthy our attention. It was confidently stated by Cornelius Bocchus, a Roman writer quoted by Solinus (c. 8.—*Serv. ad Æn.*, 12, 768) and Isidorus (*Orig.*, 8, 2), that the Umbri were of the same race with the ancient Gauls. This opinion has been rejected, on the one hand, by Cluverius and Maffei, while it has served, on the other, as a foundation for the systems of Freret and Bardetti, who contend for the Celtic origin of the Umbri.—On the rise of the Etrurian nation, the Umbrian name began to decline. They were forced to withdraw from the right bank of the Tiber, while nearly the whole of northern Italy fell under the power of their more enterprising and warlike neighbours, though an ancient Greek historian makes honourable mention of the valor of the Umbri. (*Nic. Damasc.*, ap. *Stob.*, 7, 89.) It was then, probably, that the Tuscan, as we are told, possessed themselves of three hundred towns previously occupied by the Umbri. (*Plin.*, 3, 5.) A spirit of rivalry was still kept up, however, between the two nations; as we are assured by Strabo that, when either made an expedition into a neighbouring district, the other immediately directed its efforts to the same quarter. (*Strab.*, 236.) Both nations, however, had soon to contend with a formidable foe in the Gauls who invaded Italy; and, after vanquishing and expelling the Tuscan from the Padus, penetrated still farther, and drove the Umbri from the shores of the Adriatic into the mountains. These were the Senones, who afterward defeated the Romans on the banks of the Allia, and sacked their city. The Umbri, thus reduced, appear to have offered but little resistance to the Romans; nor is it improbable that this politic people took advantage of their differences with the Etruscans to induce them to remain neuter while they were contending with the latter power. The submission of Southern Umbria appears to have taken place A.U.C. 446 (*Liv.*, 9, 41). The northern and maritime parts were reduced after the total extirpation of the Senones, about twenty-five years afterward. (*Cramer's Anc. Italy*, vol. 1, p. 251, *seqq.*—Compare *Niebuhr's Roman History*, vol. 1, p. 119, *seqq.*, *Cambridge transl.*)

UNELLI, a people of Gallia Lugdunensis Secunda, whose country formed part of the Tractus Armoricus, and answers to that part of modern Normandy in which are *Valognes*, *Coutances*, and *Cherbourg*, in the department of *la Manche*. Their capital, at first, was *Crocitonum*, answering to the modern *Valognes*. Afterward, however, their chief city was *Constantini Castra*, now *Coutances*. (*Lemaire, Index Geogr. ad Cas.*, p. 373.)

VOCONIA LEX, *de Testamentis*, by Q. Voconius Saxa, the tribune, A.U.C. 584, enacted that no one should make a woman his heiress (*Cic. in Verr.*, 1, 42), nor leave to any one, by way of legacy, more than to his heir or heirs. This law is supposed to have referred chiefly to those who were rich, to prevent the

extinction of opulent families. On account of its severity, however, it fell into disuse. (*Cic. de Fin.*, 2, 17.—*Aul. Gell.*, 20, 1.)

VOCONTII, a people of Gallia Narbonensis, in the immediate vicinity of the Alps, on the banks of the Druma or *Drome*. Their principal cities were *Vasio*, now *Vaison*; *Lacus Augusti*, now *Lac*; and *Dea Vocontiorum*, now *Die*. (*Cas.*, B. G., 1, 10.—*Lemaire, Index Geogr. ad Cas.*, p. 401.)

VOGËSUS, now *la Voège*, a mountain of Belgic Gaul, a branch of the chain of Jura, stretching in a northern direction; and in which are the sources of the *Arar* (now *Saône*), the *Mosa* (now *Meuse*), and the *Mosella* (now *Moselle*). Its greatest height, *Donnon*, is about 400 toises above the level of the sea, and its length 50 leagues. (*Lacuz.*, 1, 397.—*Cas.*, B. G., 4, 10.)

VOLATERRÆ, a city of Etruria, northwest of *Sena*, and northeast of *Vetuloni*. It stood nearly fifteen miles inland, on the right bank of the river *Cecina*. The modern name is *Volterra*; its Etrurian appellation, as appears on numerous coins, was *Velathri*. Even if we had not the express authority of Dionysius of Halicarnassus (3, 51) for assigning to *Volaterræ* a place among the twelve principal cities of ancient Etruria, the extent of its remains, its massive walls, vast sepulchral chambers, and numerous objects of Etruscan art, would alone suffice to show its antique splendour and importance, and claim for it that rank. From the monuments alone which have been discovered within its walls and in the immediate vicinity, no small idea is raised of the power, civilization, and taste of the ancient Etruscans. Its walls were formed, as may yet be seen, of huge massive stones, piled on each other without cement; and their circuit, which is still distinctly marked, embraced a circumference of between three and four miles. The citadel was built, as Strabo reports, on a hill, the ascent to which was fifteen stadia (*Strab.*, 233); and it is supposed that the Tyrrhenian city of which Aristotle (*De Mirab.*, p. 1158) speaks, under the name of *Enarres*, as being built on a hill thirty stadia high, is *Volaterræ*. The first mention of *Volaterræ* in the Roman history occurs in *Livy* (10, 12), where an engagement of no great importance is stated to have taken place near this city, at the close of a war, in which the Etruscans were leagued with the Samnites against the Romans, A.U.C. 454. In the second Punic war we find *Volaterræ* among the other cities of Etruria that were zealous in their offers of naval stores to the Romans. (*Liv.*, 28, 45.) Many years afterward *Volaterræ* sustained a siege, which lasted two years, against *Sylla*; the besieged consisting principally of persons whom that dictator had proscribed. On its surrender Italy is said to have enjoyed peace for the first time after so much bloodshed. Finally, we hear of *Volaterræ* as a colony somewhat prior to the reign of Augustus. (*Front.*, *de Col.*—Compare *Plin.*, 3, 5.—*Cramer's Anc. Italy*, vol. 1, p. 186.)

VOLATERRANA VADA, a harbour on the coast of Etruria, deriving its name from the city of *Volaterræ*, which lay inland. It is still known by the name of *Vada*. (*Cic. pro Quinct.*, 8.—*Plin.*, 3, 5.—*Rutil.*, *Itin.*, 1, 453.)

VOLCÆ, a numerous and powerful nation of southern Gaul, divided into two great branches, the *Arecomici* and *Tectosages*. I. The *Volcæ Arecomici* occupied the southwestern angle of the Roman province in Gaul, and had for their chief city *Nemausus*, now *Nîmes*.—II. The *Volcæ Tectosages* lay without the Roman province, in a southwest direction from the *Arecomici*. Their capital was *Tolosa*, now *Toulouse*.—The nation of the *Volcæ* would appear from their name to have been of German origin. Compare the German *volk*, "people," &c., whence comes the English "folk." The Roman pronunciation of *Volcæ*, moreover, was *Volka*. (*Cas.*, B. G., 7, 74, *seqq.*)

VOLCANIENSIS, a name common to many of the kings of Parthia, who made war against the Roman emperors. (*Vid.* Parthia.)

VOLESI, a people of Latium, along the coast below Antium. No notice appears to be taken by any Latin writer of the origin of this people. According to Oe- to, they occupied the country of the Aborigines (*ap. Priostan.*, 5), and were at one time subject to the Etruscans. (*Id.*, *ap. Serv.*, *En.*, 11, 567.) We learn from Titinnius, an old comic writer quoted by Festus (s. v. *Oecum*), that the Volsi had a peculiar idiom distinct from the Oscan and Latin dialects. They used the Latin characters, however, both in their inscriptions and on their coin. Notwithstanding the small extent of country which they occupied, reaching only from Antium to Terracina, a line of coast of about fifty miles, and little more than half that distance from the sea to the mountains, it swarmed with cities filled with a hardy race, destined, says the Roman historian, as it were by fortune, to train the Roman soldier to arms by their perpetual hostility. (*Liv.*, 6, 31.) The Volsi were first attacked by the second Tarquin, and war was carried on afterward between the two nations, with short intervals, for upward of two hundred years (*Liv.*, 1, 58); and though this account is no doubt greatly exaggerated by Livy, and the numbers much overrated, enough will remain to prove that this part of Italy was at that time far more populous and better cultivated than at present. (*Cramer's Anc. Italy*, vol. 2, p. 92.)

VOLTURNÆ FANUM, a spot in Etruria where the general assembly of the Etrurians was held on solemn occasions. (*Liv.*, 4, 23.—*Id.*, 5, 17.) Some trace of the ancient name is preserved in that of a church called *Santa Maria in Volturmo*. (*Lanzi*, vol. 2, p. 107.—*Cramer's Anc. Italy*, vol. 2, p. 238.)

VOLTURNUM. *Vid.* Vulsinii.

VOLUNTAS, a city in Mauritania Tingitana, between Tocolosida and Aqua Decima, in a fruitful part of the country. It is now *Waliki*. (*Ibn. Anc.*, 23.—*Mela*, 3, 10.)

VOLUMENIA, the wife of Coriolanus. (*Liv.*, 2, 40.)

VOPISCUS, one of the writers of the Augustan History. He was a native of Syracuse, and contemporary with Trebellius Pollio, having flourished towards the close of the third and in the early part of the fourth century. His father and grandfather lived on terms of intimacy with the Emperor Dioclesian. In the year 291 or 292, the prefect of Rome, Junius Tiberianus, prevailed upon Vopiscus to write a life of Aurelian, which no Latin historian had as yet taken up. He supplied him with various materials from the private papers of that prince, and also from the Ulpian library. Among the books consulted by him, Vopiscus names some Greek works. This biography was followed by the lives of Tacitus, Florian, Probus, Firmus, Saturninus, Proculus, Bonosus, Carus, Numerian, and Carinus. Flavius Vopiscus is distinguished from his brethren in the Augustan collection by possessing more of order and method: the letters and official papers, moreover, which he has inserted in his history, impart a considerable value to the work. As to style, however, he is on a level with the other writers in the Augustan History. He states, in his life of Aurelian, his intention of writing the life of Apollonius of Tyana, a project which he never executed. His works are given in the *Historia Augusta Scriptores*. (*Scholl, Hist. Lit. Rom.*, vol. 3, p. 156.)

URANIA, the muse of Astronomy, usually represented as holding in one hand a globe, in the other a rod, with which she is employed in tracing out some figure. (*Vid.* *Muse*.) By some she was said to be the mother of Hymeneus. (*Catullus*, 61, 2.—*Nonnus*, 33, 67.)

URANOPOLIS, according to most geographers, a city on the peninsula of Athos, founded by Alexander,

brother of Cassander (*Athen.*, 3, 54), and the site of which is called *Calixta*. (*Cramer's Anc. Greece*, vol. 1, p. 260.) Gail, however, maintains that no such city ever existed, and that the name was a general appellation for the whole peninsula of Athos, with its five cities. (*Gail, Atlas*, p. 21.)

URANUS (*Οὐρανός*, "Heaven" or "sky"), a deity, the same as Coelus, the most ancient of all the gods. He married Terra, or the Earth, by whom he had the Titans. (*Vid.* *Titanes*.)

URONIKUM, a town on the western coast of Carnica, east of the Rhium Promontorium. It was fabled to have been founded by Euryseas, the son of Ajax, and is now *Ajaccio*.

URIA (*Urian* or *Hyrian*), a town on the coast of Apulia, giving name to the Sinus Uria, or Gulf of *Manfredonia*. The position of this town has never been very clearly ascertained, partly from the circumstance of there being another town of the same name in Messepia, and partly from the situation assigned to it by Pliny, to the south of the promontory of Garganus, not agreeing with the topography of Strabo. (*Plin.*, 3, 11.—*Strabo*, 284.) Hence Cluverius and Cellarius were led to imagine that there were two distinct towns named Uria and Hyrian; the former situated to the south, the latter to the north of Garganus. (*Ital. Antiq.*, vol. 2, p. 1212.—*Geogr. Ant.*, lib. 2, c. 9.) It must be observed, however, that Dionysius Periegetes and Ptolemy (p. 62) mention only Hyrian, and therefore it is probable that the error has originated with Pliny. At any rate, we may safely place the Hyrium of Strabo at Rodi. (*Cramer's Anc. Italy*, vol. 2, p. 273, *seqq.*)

USARPIS or **USURIS**, a German tribe. Driven by the Suevi from the interior of Germany, the Usipetes presented themselves on the banks of the Lower Rhine, crossed that stream, and passed through the territories of the Menapii into Gaul. Caesar defeated them and drove them back over the Rhine, and we then find them settling to the north of the Lappia or *Lappe*, and reaching to the eastern mouth of the Rhine. At a subsequent period they had their settlement between the *Sieg* and *Lahn*, but gradually merged into the name of *Allemanni*. (*Manusert, Geogr.*, vol. 3, p. 153, 220.)

USURICA, a mountain and valley in the Sabine territory, near Horace's farm. (*Horat.*, *Od.*, 1, 17, 11.)

UTICA, a city of Africa, on the seacoast, northwest of Carthage, and separated from its immediate district by the river Bagradas. The Greeks called the name *Ityke* (*Ιτύκη*), probably by a corruption. Utica was the earliest, or one of the earliest colonies planted by Tyre on the African coast, and Bochart deduces the name from the Phœnician *Utica*, i. e., "ancient" (*Geogr. Sac.*, 1, 24, col. 474, l. 1.) Velleius Paterculus makes it to have been founded about the time that Cedrus was king at Athens, about 1160 B.C., consequently in the period when the Greeks were beginning to make their settlements along the coast of Asia Minor (1, 2). Justin asserts that Utica was more ancient than Carthage (18, 4, 5). It was originally a free and independent city, like all the other large settlements of the Phœnicians, and had a senate and suffetes, or presiding magistrates, of its own. As Carthage, however, rose gradually into power, it assumed a kind of protection over Utica, as would appear in particular from the language of the second treaty between Rome and Carthage, where the latter state speaks not only for itself, but also for the people of Utica. (*Polyb.*, 3, 24.) At a subsequent period we find Utica, it is true, still with a separate constitution of its own, but, in reality, more or less dependant upon the power of Carthage. Hence the disaffection frequently shown by the inhabitants to the Carthaginian cause, the ease with which Agathocles made himself master of the place, and its siding with the re-

volted mercenaries after the first Punic war. (*Diod. Sic.*, 20, 54. — *Polyb.*, 1, 82, 88.) The punishment inflicted by the Carthaginians on the people of Utica, on the quelling of this rebellion, probably drew more closely the connexion between the two cities; at least Scipio besieged Utica in vain during the second Punic war. At the beginning of the third Punic contest, however, the inhabitants of Utica regarded it as the safer course to separate their interests from those of Carthage. They gave themselves up, therefore, voluntarily to the power of Rome, and this latter state had now a firm foothold for the prosecution of all her ambitious plans in relation to Africa. (*Polyb.*, 36, 1.) As some recompense to the Uticensis for the valuable aid they had afforded during the war, the Romans, at its close, bestowed upon them a large portion of the territory immediately adjacent to Carthage (*Appian, Bell. Pun.*, c. 135); and Utica was now, and remained as long as Carthage continued in ruins, the first city of Africa in point of importance, and the seat of the proconsul. And yet it never became a very flourishing city, since in all the civil wars of the Romans detachments of one party or the other invariably landed near this place, and fought many of their battles here. Thus, it was near Utica that Pompey defeated the opponents of Sylla (*Orosius*, 5, 21); here, too, Curius contended for Cæsar, and, not long after, Cæsar's opponents selected Utica as the chief seat of the war. The issue was an unfortunate one for the republican party, and Cato (hence called *Uticensis*) found here a death by his own hand. Hitherto Utica had remained a free city, with its old constitution; and hence Hirtius speaks of its senate. (*Auct., Bell. Afr.*, c. 87, 90.) Augustus declared the place a Roman colony. (*Dio Cass.*, 49, 18. — *Plin.*, 5, 4.) It still, however, retained, in some measure, its early constitution, and hence is styled by Aulus Gallius a municipium (16, 13). At a later period, Utica was regarded, after Carthage, the latter having been rebuilt, as the second in Africa. Utica had no harbour, but safe roads in front of the town. Its ruins are to be seen at the present day near *Porto Farina*. (*Mannert, Geogr.*, vol. 10, pt. 2, p. 388, *seqq.*)

VULOANALIA, festivals in honour of Vulcan, brought to Rome from Præneste, and observed in the month of August. The streets were illuminated, fires kindled everywhere, and animals thrown into the flames, as a sacrifice to the deity. (*Varro, L. L.*, 5, 3. — *Plin.*, 18, 13.)

VULCANI INSULÆ: *Vid.* *Æolus* (Insule), and *Lipara*.

VULCĀNUS, the god of fire, the same with the Hephæstus (Ἡφαίστος) of the Greeks. Hephæstus, the Olympian artist, is in Homer the son of Jupiter and Juno. (*Il.*, 1, 572, 578.) According to Hesiod, however, he was the son of Juno alone, who was unwilling to be outdone by Jupiter when he had given birth to Minerva. (*Theog.*, 927.) He was born lame, and his mother was so shocked at the sight of him that she flung him from Olympus. The Ocean-nymph Eurynome and the Nereid Thetis saved and concealed him in a cavern beneath the Ocean, where, during nine years, he employed himself in manufacturing for them various ornaments and trinkets. (*Il.*, 18, 394, *seqq.*) We are not informed how his return to Olympus was effected; but we find him, in the *Iliad*, firmly fixed there; and all the mansions, furniture, ornaments, and arms of the Olympians were the work of his hands. It would be an almost endless task to enumerate all the articles formed by Hephæstus. Only the chief of them will here be noticed. One thing is remarkable concerning them, that they were all made of the various metals; no wood, or stone, or any other substance entering into their composition: they were, moreover, frequently endowed with automatism. Hephæstus made armour for Achilles and other mortal heroes.

(*Il.*, 9, 195.) The fatal collar of Harmonia was the work of his hands. (*Apollod.*, 3, 4, 3.) The brass-footed, brass-throated, fire-breathing bulls of Æetes, king of Colchis, were the gift of Hephæstus to Æetes' father Helius. (*Apollon. Rhod.*, 3, 230.) He also made for Alcibiades, king of the Phæacians, the gold and silver dogs which guarded his house. (*Od.*, 7, 91.) For himself he formed the golden maidens, who waited on him, and whom he endowed with reason and speech. (*Il.*, 18, 419.) He gave to Minos, king of Crete, the brazen man Talus, who each day compassed his island three times to guard it from the invasion of strangers. (*Apollod.*, 1, 9, 26.) The brazen cup, in which the Sun-god and his horses and chariot are carried round the earth every night, was also the work of this god. The only instances we meet of Hephæstus' working in any other substance than metal are in Hesiod, where, at the command of Jupiter, he forms Pandora of earth and water (*Op. et D.*, 60), and where he uses gypsum and ivory in the formation of the shield which he makes for Hercules. (*Scut., Here.*, 141.) That framed by him for Achilles in the *Iliad* is all of metal. — In the *Iliad* (18, 382), the wife of Hephæstus is named Charis; in Hesiod (*Theog.*, 945), Aglaia, the youngest of the Graces; in the interpolated tale in the *Odyssey* (8, 266, *seqq.*), Aphrodite, the goddess of beauty. — The favourite haunt of Hephæstus on earth was the isle of Lemnos. It was here that he fell when flung from Heaven by Jupiter for attempting to aid his mother Juno, whom Jupiter had suspended in the air with anvils fastened to her feet. As knowledge of the earth increased, Ætna and all other places where there was subterranean fire were regarded as the forges of Hephæstus; and the Cyclopes were associated with him as his assistants. In Homer, when Thetis wants Hephæstian armour for her son, she seeks Olympus, and the armour is fashioned by the artist-god with his own hand. In the Augustan age Venus prevails on her husband, the master-smith, to furnish her son Æneas with arms; and he goes down from Heaven to Hiera (one of the Lipæan isles), and directs his men, the Cyclopes, to execute the order. (*Æn.*, 8, 407, *seqq.*) It is thus that mythology changes with modes of life. Hephæstus and Minerva are frequently joined together as the communicators unto men of the arts which embellish life and promote civilization. The philosophy of this view of the two deities is correct and elegant. (*Od.*, 6, 233. — *Id.*, 23, 160. — *Hom., Hymn.*, 20. — *Plato, Polit.*, p. 177. — *Völcker, Myth. der Lap.*, p. 21, *seq.*) — The artist-god is usually represented as of ripe age, with a serious countenance and muscular form: his hair hangs in curls on his shoulders. He generally appears with hammer and tongs at his anvil, in a short tunic, and his right arm bare; sometimes with a pointed cap on his head. The Cyclopes are occasionally placed with him. — Hephæstus must have been regarded originally as simply the fire-god, a view of his character which we find even in the *Iliad* (20, 73; 21, 330, *seqq.*). Fire being the great agent in reducing and working the metals, the fire-god naturally became an artist. The former was probably Hephæstus' Pelasgian, the latter his Achæan character. — The Vulcan of the Latins was also, like Hephæstus, the god of fire, but he is not represented as an artist. He was said, in one legend, to be the father of Servius Tullius, whose wooden statue was, in consequence, spared by the flames when they consumed the temple of Fortune in which it stood. (*Ovid, Fast.*, 6, 627. — *Dion. Hal.*, 4, 40.) He was also the reputed father of Cæculus, the founder of Præneste, the legend of whose birth is nearly similar to that of Servius. (*Virg., Æn.*, 7, 678, *seqq.* — *Servius, ad loc.*) Vulcan was united with a female power named Maia. (*Keightley's Mythology*, p. 107, 518.)

VULCATIUS, Gallicanus, one of the writers of the

Angustan History. He has the title of *Vir Clavatus*, which indicates that he was a senator. Vulcatius lived under Dioclesian, and proposed to himself to write a history of all the Roman emperors; we have from him, however, only the life of Avidius Cassius. Some manuscripts even assign this biography to Spartianus.

VULSINIÆ or **VOLSINIÆ**, and also **VULSINIUM** or **VOLSINUM**, a city of Etruria, situate on the northern shore of the Lacus Vulsiniensis. It is generally allowed to rank among the first cities of the country. An account of its early contest with Rome is to be found in Livy (5, 31). About the time of the war against Pyrrhus, Vulsinii, which the Roman writers represent as a most opulent and flourishing place, becomes so enervated by its wealth and luxury as to allow its slaves to overthrow the constitution, and give way to the most unbridled licentiousness and excess, till at last the citizens were forced to seek for that protection from Rome which they could not derive from their own resources. The rebels were speedily reduced, and brought to condign punishment. (*Val. Max.*, 8, 1.—*Flor.*, 1, 21.—*Oros.*, 4, 5.) As a proof of the ancient prosperity of Vulsinii, it is stated by Pliny, on the authority of Metrodorus Scepius, that it possessed, when taken by the Romans, no less than 2000 statues. (*Plin.*, 34, 7.) From Livy we learn that the Etruscan goddess Nortia was worshipped there, and that it was customary to mark the years by fixing nails in her temples (7, 3). Vulsinii, at a later period, is noted as the birthplace of Sejanus. (*Tac.*, *Ann.*, 4, 1.) It is now *Bolsena*. (*Cramer's Anc. Italy*, vol. 1, p. 221, *seqq.*)

VULTURNUM, a town of Campania, at the mouth of the river Volturnus, and on the left bank. It is now *Castel di Volturno*. The origin of this city was probably Etruscan, but we do not find it mentioned in history until it became a Roman colony, A.U.C. 558. (*Liv.*, 34, 45.) According to Frontinus, a second colony was sent thither by Cæsar. Festus includes it among the prefectures. (*Cramer's Anc. Italy*, vol. 2, p. 145.)

VULTURNUS, I. a river of Campania, now *Volturno*, rising among the Apennines, in the territory of Samnium, and discharging its waters into the lower sea. At its mouth stood the town of Vulturnum. The modern name is the *Volturno*. A magnificent bridge, with a triumphal arch, was thrown over this river by Domitian when he caused a road to be constructed from Sinuessa to Puteoli; a work which Statius has undertaken to eulogize in some hundred lines of indifferent poetry. (*Sylv.*, 4, 3.—*Cramer's Anc. Italy*, vol. 2, p. 144.)—II. A name applied by the Latin writers to the southeast wind, and answering to the Greek *Eûpôreros*. (*Aul. Gell.*, 2, 22.—*Vitrue.*, 1, 6.)

UXANTIS, an island off the coast of Gaul, now *Ushant*. (*Itin. Hieron.*, 509.)

UXELLODŪNUM, a city in Aquitanic Gaul, in the territory of the Cadurci; now *Pueche d'Issoulen*. (*Cæs.*, *B. G.*, 8, 32.)

UXII, a mountaineer race occupying the ranges that run on each side of the river Orontes, and separate Persia from Susiana. They were predatory in their habits. (*Diod.*, 27, 67.—*Arrian, Ind.*, 3, 16.—*Plin.*, 6, 27.)

X.

XANTIPPE (*Ξανθίππη*), less correctly **XANTIPPA**, the wife of Socrates, represented by many of the ancient writers as a perfect termagant. It is more than probable, however, that the infirmities of this good woman have been exaggerated, and that calumny has had some hand in finishing her picture; for Socrates himself, in a dialogue with his son Lamprocles (*Mæn.*, 2, 2), allows her many domestic virtues; and we find her afterward expressing great affection for her hus-

band during his imprisonment. She must have been as deficient in understanding as she was froward in disposition if she had not profited by the daily lessons which, for twenty years, she received from such a master. (*Enfield's History of Philosophy*, vol. 1, p. 171.—Compare the remarks of Mendelssohn, in his life of Socrates, prefixed to his German version of *Plato's Phædon*, p. 17, *seqq.*)

XANTHIPPOS, I. a Spartan leader, who fought on the side of the Carthaginians in the first Punic war, and defeated Regulus. He is said to have left Carthage soon after this success, apprehending evil consequences to himself from the jealousy of the inhabitants. (*Vid. Regulus*).—II. An Athenian commander, who led the forces of Athens at the battle of Mycale. He was father of the celebrated Pericles. (*Vid. Mycale*.)

XANTHUS or **XANTHOS**, I. a river of Troas in Asia Minor, the same as the Scamander, and, according to Homer, called Xanthus by the gods and Scamander by men. (*Vid. remarks under the article Troja*, "Topography of Troy.")—II. A river of Lycia, falling into the sea above Patara. It was the most considerable of the Lycian streams, and at an early period bore the name of Sirbes, as Strabo writes it, but Sibrus according to Panyasis (*ap. Steph. Byz.*, s. v. *Τριπίλη*). This stream was navigable for small vessels; and at the distance of seventy stadia from its mouth was Xanthus, the principal city of the Lycians. (*Cramer's Asia Minor*, vol. 2, p. 247.) Bochart, with great probability on his side, regards the name Xanthus as a mere translation into Greek of the Oriental and earlier name, since the term *Sirbe*, both in Arabic and Phœnician, is equivalent to the Greek *ξανθός*, "yellow." (*Geogr. Sacr.*, 1, 8, col. 363.)—III. The chief city of Lycia, situate on the river of the same name, at the distance of seventy stadia from its mouth. Pliny says it was fifteen miles from the sea; but that distance is too considerable, there being no doubt that the Lycian capital occupied the site of *Akzenide*, which occurs in the situation described by Strabo (666).—Compare *Hecataeus, ap. Steph. Byz.*, s. v. *Ξάνθος*. The Xanthians have twice been recorded in history for the dauntless courage and perseverance with which they defended their city against a hostile army. The first occasion occurred in the invasion of Lycia by the army of Cyrus under Harpagus, after the conquest of Lydia, when they buried themselves under the ruins of their walls and houses. (*Herod.*, 1, 176.) The second event here alluded to took place many centuries later, during the civil war consequent on the death of Cæsar. The Xanthians having refused to open their gates to the republican army commanded by Brutus, that general invested the town, and, after repelling every attempt made by the citizens to break through his lines, finally entered it by force. The Xanthians are said to have resisted still, and even to have perished in the flames, with their wives and children, rather than fall into the hands of the Roman general, who made many attempts to turn them away from their desperate purpose. (*Plut.*, *Vit. Brut.*—*Appian, Bell. Civ.*, 4, 18.—*Dio Cass.*, 47, 34.)—Mr. Fellows describes the remains at Xanthus as all of the same date, and that a very early one. "The walls are many of them Cyclopean. The language of the innumerable and very perfect inscriptions is like the Phœnician or Etruscan; and the beautiful tombs in the rocks are also of very early date. The city has not the appearance of having been very large, but its remains show that it was highly ornamented, particularly the tombs." A detailed account of several of these tombs, and of the sculptures upon them, is also given by the same traveller. (*Fellows' Asia Minor*, p. 225, *seqq.*)—IV. An ancient historian of Lydia. We learn from Suidas (s. v. *Ξάνθος*) that his father's name was Candaneus; that he flourished at the time of the capture of Sardis by the Ionians (Oli. 69); and that he

wrote a *History of Lydia* in four books. *Suidas* cites the second. *Dionysius of Halicarnassus* also quotes this work, and speaks of the author in terms of high commendation. (*Ant. Rom.*, vol. 1, p. 22, ed. *Reiske*.) The *Lydiaca* are quoted by *Parthenius*, in *Stephanus of Byzantium*, and probably by the scholiast on *Apollonius Rhodius*: by *Hephæstion* also (p. 14, ed. *Gaisf.*). The fragments of *Xanthus* are given by *Creuzer* in his "*Historicorum Græcorum Antiquiss. Fragmenta*," *Heidelb.*, 1806, 8vo, p. 148, seqq. (*Mus. Crit.*, vol. 2, p. 109, seqq.)

XENOCLES, an Athenian tragic poet, ridiculed by *Aristophanes*, and yet the conqueror of *Euripides* on one occasion (*Olym.* 91.2, B.C. 415). He was of dwarfish stature, and son of the tragic poet *Carcinus*. In the *Pax*, *Aristophanes* applies the term *μυχανοδία* to the family. From the scholiast it appears that *Xenocles* was celebrated for introducing machinery and stage-shows, especially in the ascent or descent of his gods. (*Theatre of the Greeks*, 3d ed., p. 66.)

XENOCRATES, I. an ancient philosopher, born at *Chalcedon* in the 95th Olympiad, B.C. 400. He first attached himself to *Æschines*, but afterward became a disciple of *Plato*, who took much pains in cultivating his genius, which was naturally heavy. *Plato*, comparing him with *Aristotle*, who was also one of his pupils, called the former a dull ass, who needed the spur, and the latter a mettlesome horse, who required the curb. His temper was gloomy, his aspect severe, and his manners little tinged with urbanity. These material defects his master took great pains to correct, frequently advising him to sacrifice to the *Græcæ*; and the pupil was patient of instruction, and knew how to value the kindness of his preceptor. He compared himself to a vessel with a narrow orifice, which receives with difficulty, but firmly retains whatever is put into it. So affectionately was *Xenocrates* attached to his master, that when *Dionysius*, in a violent fit of anger, threatened to find one who should cut off his head, he said, "Not before he has cut off this," pointing to his own. As long as *Plato* lived, *Xenocrates* was one of his most esteemed disciples; after his death he closely adhered to his doctrine; and, in the second year of the hundred and tenth Olympiad, B.C. 399, he took the chair in the Academy as the successor of *Speusippus*. *Aristotle*, who, about this time, returned from *Macedonia*, in expectation, as it should seem, of filling the chair, was greatly disappointed and chagrined at this nomination, and immediately instituted a school in the Lyceum, in opposition to that of the Academy where *Xenocrates* continued to preside till his death. *Xenocrates* was celebrated among the Athenians, not only for his wisdom, but also for his virtues. (*Val. Max.*, 2, 10.—*Cic.*, ad *Att.*, 2, 16.—*Diog. Laert.*, 4, 7.) So eminent was his reputation for integrity, that when he was called upon to give evidence in a judicial transaction, in which an oath was usually required, the judges unanimously agreed that his simple asseveration should be taken, as a public testimony to his merit. Even *Philip of Macedon* found it impossible to corrupt him. When he was sent, with several others, upon an embassy to that prince, he declined all private intercourse with him, that he might escape the temptation of a bribe. *Philip* afterward said, that of all those who had come to him on embassies from foreign states, *Xenocrates* was the only one whose friendship he had not been able to purchase. (*Diog. Laert.*, 4, 8.) During the time of the *Lamiae* war, being sent an ambassador to the court of *Antipater* for the redemption of several Athenian captives, he was invited by the prince to sit down with him at supper, but declined the invitation in the words of *Ulysses* to *Circe*. (*Odys.*, 10, 389.) This pertinent and ingenious application of a passage in *Homer*, or, rather, the generous and patriotic spirit which it expressed, was so

pleasing to *Antipater* that he immediately released the prisoners. It may be mentioned as another example of moderation in *Xenocrates*, that when *Alexander*, to mortify *Aristotle*, against whom he had an accidental pique, sent *Xenocrates* a magnificent present of fifty talents, he accepted only thirty *minæ*, returning the rest to *Alexander* with this message: that the large sum which *Alexander* had sent was more than he should have been able to spend during his whole life. So abstemious was he with respect to food, that his provision was frequently spoiled before it was consumed. His chastity was invincible. *Lais*, a celebrated Athenian courtesan, attempted, without success, to seduce him. Of his humanity, no other proof can be necessary than the following pathetic incident. A sparrow, which was pursued by a hawk, flew into his bosom; he afforded it shelter and protection till its enemy was out of sight, and then let it go, saying that he would never betray a suppliant. (*Æt.*, V. H., 13, 31.) He was fond of retirement, and was seldom seen in the city. He was discreet in the use of his time, and carefully allotted a certain portion of each day to its proper business. One of these he employed in silent meditation. He was an admirer of the mathematical sciences, and was so fully convinced of their utility, that, when a young man who was unacquainted with geometry and astronomy desired admission, he refused his request, saying that he was not yet possessed of the handles of philosophy. In fine, *Xenocrates* was eminent both for the purity of his morals and for his acquaintance with science, and supported the credit of the Platonic school by his lectures, his writings, and his conduct. (*Plut.*, de *Virt. Mor.*, 2, p. 399.) He lived to the first year of the 116th Olympiad, B.C. 316, or the 82d of his age, when he lost his life by accidentally falling, in the dark, into a reservoir of water. The philosophical tenets of *Xenocrates* were truly Platonic, but in his method of teaching he made use of the language of the *Pythagoreans*. He made *Unity* and *Diversity* principles in nature, or gods; the former of whom he represented as the father, and the latter as the mother of the universe. He taught that the heavens are divine, and the stars celestial gods; and that, besides these divinities, there are terrestrial demons of a middle order, between the gods and man, which partake of the nature both of mind and body, and are therefore, like human beings, capable of passions and liable to diversity of character. (*Diog. Laert.*, 4, 9, 10.—*Plut.* in *Alex.*, vol. 5, p. 551.—*Val. Max.*, 4, 3.—*Stob.*, Ed. *Phys.*, 1, 3.—*Plut.*, de *La. et. Os.*, vol. 2, p. 157.—*Enfield's Hist. Philos.*, vol. 1, p. 244, seqq.)—II. A Greek physician of *Aphrodisias*, a work of whose is still remaining, on the aliment afforded by fishes. The best edition is that published at *Naples* in 1794, 8vo, and which is based upon the edition of *Franzius*, which last appeared in 1774, *Lips.*, 8vo. (*Sprengel, Hist. de la Méd.*, vol. 2, p. 57.)

XENOPHANES, the founder of the Eleatic sect, was a native of *Colophon*, and born, according to *Eusebius*, about B.C. 556. From some cause which is not related, *Xenophanes* early left his country and took refuge in *Sicily*, where he supported himself by reciting, at the court of *Hiero*, elegiac and iambic verses, which he had written in reprehension of the *Theogonies* of *Hesiod* and *Homer*. From *Sicily* he passed over into *Magna Græcia*, where he took up the profession of philosophy, and became a celebrated preceptor in the *Pythagorean* school. Indulging, however, a greater freedom of thought than was usual among the disciples of *Pythagoras*, he ventured to introduce new opinions of his own, and in many particulars to oppose the doctrines of *Epimenides*, *Thales*, and *Pythagoras*. He possessed the *Pythagorean* chair of philosophy about 70 years, and lived to the extreme age of 100 years. In metaphysics, *Xenophanes*

anes taught that if there ever had been a time when nothing existed, nothing could ever have existed. That whatever is, always has been from eternity, without deriving its existence from any prior principle; that nature is one and without limit; that what is one is similar in all its parts, else it would be many; that the one infinite, eternal, and homogeneous universe is immutable and incapable of change; that God is one incorporeal eternal being, and, like the universe, spherical in form; that he is of the same nature with the universe, comprehending all things within himself; is intelligent, and pervades all things, but bears no resemblance to human nature either in body or mind. (*Enfield's History of Philosophy*, vol. 1, p. 414.)

XENOPHON, I. a celebrated Athenian, son of Gryllus, distinguished as an historian, philosopher, and commander, born at Ercheia, a borough of the tribe Egeia, B.C. 445. (*Letronne, Biogr. Univ.*, vol. 51, p. 370.) Xenophon was unquestionably one of the most respectable characters among the disciples of Socrates. He strictly adhered to the principles of his master in action as well as opinion, and employed philosophy, not to furnish him with the means of ostentation, but to qualify him for the offices of public and private life. While he was a youth, Socrates, struck with the comeliness of his person (for he regarded a fair form as a probable indication of a well-proportioned mind), determined to admit him into the number of his pupils. Meeting him by accident in a narrow passage, the philosopher put forth his staff across the path, and, stopping him, asked where those things were to be purchased which are necessary to human life. Xenophon appearing at a loss for a reply to this unexpected salutation, Socrates proceeded to ask him where honest and good men were to be found. Xenophon still hesitating, Socrates said to him, "Follow me, and learn." From that time Xenophon became a disciple of Socrates, and made a rapid progress in that moral wisdom for which his master was so eminent. Xenophon accompanied Socrates in the Peloponnesian war, and fought courageously in defence of his country. It was at the battle of Delium, in the early part of this war, that Socrates, according to some accounts, saved the life of his pupil. In another battle, also fought in Boeotia, but of which history has preserved no trace, Xenophon would seem to have been made prisoner by the enemy; for Philostratus (*Vit. Soph.*, 1, 12) informs us that he attended the instructions of Prodicus of Ceos while he was a prisoner in Boeotia. How his time was employed during the period which preceded his serving in the army of Cyrus is not ascertained; it is more than probable, however, that he was engaged during the interval in several campaigns, since the skill and experience displayed in conducting the retreat of the Ten Thousand presuppose a familiar acquaintance with the art of war. At the age of forty-three or forty-four years, he was invited by Proxenus the Boeotian, formerly a disciple of Gorgias of Leontini, and one of Xenophon's intimate friends, to enter into the service of Cyrus the younger, the brother of Artaxerxes Mnemon of Persia. Xenophon consulted Socrates in relation to this step, and the philosopher disapproved of it, being apprehensive lest his old pupil might incur the displeasure of the Athenians by joining a prince who had shown himself disposed to aid the Lacedæmonians in their war against Athens. He advised him, however, to visit Delphi, and consult the god about his intended scheme. Xenophon obeyed, but merely asked the oracle to which one of the gods he ought to sacrifice and offer up vows in order to ensure the success of what he was then meditating. For this Socrates blamed him, but, nevertheless, advised him to do what the god had enjoined, and then to take his departure. At Sardis, Xenophon met his friend Proxenus, and obtained, through him, an introduction to Cyrus, by whom he was well received.

The prince promised, if he would enter into his service, to send him home in safety after his expedition against the Pisidians should have terminated. Xenophon, believing the intended expedition to have no other end than this, consented to take part in it, being equally deceived with Proxenus himself; for, of all the Greeks who accompanied Cyrus, Clearchus alone was from the beginning in the secret. The army of Cyrus marched from Sardis, through Lydia, Phrygia, Lycæonia, and Cappadocia, crossed the mountains of Cilicia, passed through Cilicia and Syria to the Euphrates, forded this river, passed through a part of Arabia and Babylonia, until they reached the plain of Cunaxa. After the fatal battle of Cunaxa and the fall of Cyrus, Xenophon advised his fellow-soldiers rather to trust to their own bravery than surrender themselves to the victor, and to attempt a retreat into their own country. They listened to his advice; and, having had many proofs of his wisdom as well as courage, they elected him one of the five new commanders, chosen to supply the place of their former leaders, who had been entrapped and slain by Tissaphernes. Xenophon was appointed in the room of Proxenus, and soon became the soul of all the movements of the Greeks in their memorable retreat, acquiring great glory by the prudence and firmness with which he conducted them back, through the midst of innumerable dangers. The particulars of this memorable adventure are related by Xenophon himself, in his *Anabasis*, or *Retreat of the Ten Thousand*. In retreating, the object of the Greeks was to strike the Euxine; but the error they committed was in making that sea extend too far to the east. From Cunaxa they turned their course to the Tigris, crossed that river, marched through Media, northward, still following the course of the Tigris. They then crossed the mountains of the Carduchi, and, after great exertions, reached the sources of the river just mentioned. After this they traversed Armenia, crossed the Euphrates not far from its source, lost many of their number in the marches through the cold and snow, and came to the Phasis. Leaving this stream, they passed through the countries of the Taochi, Chalybes, Macrones, Colchians, and at last reached the Greek colony of Trapezus on the coast of the Euxine Sea. As there were not ships enough there to receive them all, they determined to return home by land, and, marching along the coast of the Euxine, came to Chrysopolis opposite Byzantium. After having crossed over to the latter city, and been deceived by the promises of Anaxibius, the Spartan admiral, they entered into the service of Seuthes, king of Thrace, who had solicited their aid. This prince, however, proving faithless, and paying them only a part of their stipulated recompense, they finally entered into the service of Thymbron, who had been directed by the Spartans to raise an army and make war upon the satraps Pharnabazus and Tissaphernes. According to Xenophon, the whole distance traversed by the Greeks, both in going and returning, was 1155 parasangs, or 34,650 stadia. The whole time taken up was fifteen months, of which the retreat itself occupied less than eight.—Having returned to Greece, Xenophon, after an interval of four or five years, joined Agesilaus, king of Sparta, and fought with him, not only in Asia, but also against the Thebans at home, in the battle of Coronæ. The Athenians, displeased at this alliance, brought a public accusation against him for his former conduct in engaging in the service of Cyrus, and condemned him to exile. The Spartans, upon this, took Xenophon, as an injured man, under their protection, and provided him with a comfortable retreat at Scilluns in Elis, making him a present of a dwelling there, with considerable land attached to it. According to Pausanias (5, 6), they gave him the entire town of Scilluns. Here he remained, if we believe the same Pausanias, for the remainder of his

days, and in this retreat dedicated his time to literary pursuits. Xenophon himself has given us, in the *Anabasis* (5, 3, 7), an interesting account of his residence at Scilluna, where he erected a temple to the Ephesian Diana, in performance of a vow made during the famous retreat which he so ably conducted. In this place he died, in the 90th year of his age. Pausanias, who visited the ruins of Scilluna, states that the tomb of Xenophon was pointed out to him, and over it his statue of Pentelic marble. He adds, that when the Eleans took Scilluna, they brought Xenophon to trial for having accepted the estate at the hands of the Spartans, but that he was acquitted, and allowed to reside there without molestation. The common account, however, makes him to have retired to Corinth when a war had broken out between the Spartans and Eleans, and to have ended his days there. The integrity, the piety, and the moderation of Xenophon rendered him an ornament to the Socratic School, and proved how much he had profited by the precepts of his master. His whole military conduct discovered an admirable union of wisdom and valour. And his writings, at the same time that they have afforded, to all succeeding ages, one of the most perfect models of purity, simplicity, and harmony of language, abound with sentiments truly Socratic.—By his wife Philetia Xenophon had two sons, Gryllus and Diodorus; the former of whom fell with glory in the battle of Mantinea, after having inflicted a mortal wound on Epaminondas, the Theban commander. (*Vid.* Gryllus.)—The works of Xenophon, who has been styled, from the sweetness and graceful simplicity of his language, the “Attic bee,” are as follows: 1. *Ἑλληνικά* (“*Grecian History*”), in seven books. In this work Xenophon gives a continuation of the history of Thucydides, down to the battle of Mantinea. It was undertaken at an advanced age, amid the retirement of Scilluna, and completed either there or at Corinth. The work is full of lacunæ and falsified passages. The recital of the battle of Leuctra is not given with sufficient development, and it is evident that Xenophon relates with regret the victory of Epaminondas over his adopted country. Xenophon does not imitate in this production the manner of Thucydides. That of Herodotus accorded better with his general character as a writer, and had more analogy to the style of eloquence that marked the school of Isocrates, of which Xenophon had been a disciple.—2. *Ἀνάβασις* (“*The Expedition into Upper Asia*”), otherwise called “the Retreat of the Ten Thousand.” Xenophon, as has already been remarked, bore a large share in this glorious expedition. His narrative, written with great clearness and singular modesty, forms one of the most interesting works bequeathed to us by antiquity.—3. *Κόρον Παιδεία* (“*The Education of Cyrus*”). This work not only gives a view of the earlier years of Cyrus the Great, but also of his whole life, and of the laws, institutions, and government employed by him at home and abroad, in peace and in war. Dionysius of Halicarnassus (*Ep. ad Cn. Pomp.*—*Op.* vol. 6, p. 777, *ed. Reiske*) characterizes the work as the *ἐκὼνα βασιλέως ἡγαθοῦ καὶ εὐδαίμονος*, and Cicero (*Ep. ad Q. Fr.*, 1, 1, 8) warns us not to consider this treatise as constructed with historic faith, but as a mere pattern of just government. In fact, the *Cyropædia* is less a history than a species of historical romance. Cyrus is represented to us as a wise and magnanimous, a just, generous, and patriotic king; as a great and experienced, a prudent and invincible commander; a bright exemplar to those who are called to wield the military energies of nations, to defend their father-land from hostile aggression, to conquer on a foreign soil the enemies of their country, to enlarge the boundaries of their empire, and to diffuse over subject millions the blessings of civil order and peaceful industry, of extended manufactures, trade,

and commerce. Plato (*de Leg.*, 3.—*Op.*, vol. 8, p. 142, *ed. Bip.*) denies that Cyrus *ὁδοῖς ταυδεῖας ἡγήσθαι*, and this statement is considered by Valckenaer to have been directed against the representations of Xenophon; and hence we need feel no surprise at the opposition between the Banquet of Xenophon and that written by Plato. From Aulus Gellius (*N. A.*, 14, 3) we discern some traces of this personal hostility between these great philosophers. (*Barker, de Xen. Cyrop.*, 1, 1.—Compare remarks under the article Plato.)—As regards the more received accounts relative to the elder Cyrus, the student is referred to that article itself.—Some modern critics have thought that Xenophon, in this work, is not as romantic in his details as he is commonly supposed to be, but that he gives us the mode of education adopted in the case of the young Persians that belonged to a privileged caste, that of the warriors namely, and not the manner of rearing which was common to the people at large. One thing at least is certain, that nothing in the *Cyropædia* indicates the intention of its author to produce a work of the imagination. Others have supposed that Xenophon's object in writing the treatise in question was to criticise the first two books of Plato's *Republic*, and that the latter retaliated in his third book of laws by drawing a character of Cyrus quite different from that which Xenophon had depicted. (Consult *Aul. Gell.*, l. c., and, in relation to the *Cyropædia* generally, the Dissertation of *Fraguier, Mem. de l'Acad. des Inscrip.*, &c., vol. 2, p. 48.—*Sainte-Croix, Observations*, &c., *ibid.*, vol. 46, p. 399.—*Baden, Opuscula Latina*, Havn., 1763, 8vo, n. 2.—*Deum, Bértner Monatschrift*, 1796, vol. 1, p. 69.) Though the *Cyropædia* be certainly the work of Xenophon, some doubts have nevertheless arisen with respect to the latter part of the history, and which Valckenaer, Schneider, F. A. Wolfe, and many other modern scholars regard as the addition of some later writer, who wished to weaken the favourable impression towards the Persians which the perusal of the main work could not fail to produce. (Compare *Schulz, De Cyropædia epilog.*, &c. *Hal.*, 1806, 8vo.—*Bornemann, Epilog. der Cyropædie*, &c., *Leipz.*, 1819, 8vo.)—4. *Λόγος εἰς Ἀγροίλαον* (“*Eloge on Agesilaus*”). Xenophon had followed this prince in his expedition into Asia, and had been an eyewitness of his victories in that country. He had accompanied him also in his Grecian campaigns, and his attachment to this eminent commander was the secret cause of his banishment from Athens. No one, therefore, was better qualified to write the biography of this celebrated Spartan. Cicero, in speaking of this work of Xenophon's, says that it surpasses all the statues ever erected to the Lacedæmonian monarch (*Ep. ad Fam.*, 5, 12); and yet some modern critics, with Valckenaer at their head, have regarded this piece of biography as below the standard of Xenophon's acknowledged abilities as a writer, and the production of some sophist or rhetorician of a subsequent age.—5. *Ἀπομνημονεύματα Σωκράτους* (“*Memoirs of Socrates*”), the best of Xenophon's philosophical works. It gives, first, a justification of Socrates against the charge of having introduced strange deities instead of worshipping the national ones, and of having corrupted the young by his example and maxims. It then goes on to adduce various conversations between Socrates and his disciples on topics of a moral and religious nature. (Consult *Dissen, De philosophia morali in Xenophontis de Socrate commentariis tradita*, Göt., 1812.) This work, written with singular grace and elegance, offends in many instances against the rules and the form of the dialogue, and becomes, on these occasions, an actual monologue. It is divided into four books, but is thought to have been anciently more voluminous.—6. *Σωκράτους Ἀπολογία πρὸς τοὺς δικαστὰς* (“*Defence of Socrates before his Judges*”). This piece is not, as the title

indicates, a pleading delivered in the presence of his judges; neither is it a defence of himself, on the part of Socrates, against the vices and crimes laid to his charge; it is rather a development of the motives which induced the sage to prefer death to the humiliation of addressing entreaties and supplications to prejudiced judges. Valckenauer and Schneider consider the work unworthy of Xenophon. The former of these critics sees in this the production of the same individual who fabricated the latter part of the *Cyropædia*; while Schneider thinks that it once formed a portion of the *Memoirs* of Socrates, and that the grammarians, after detaching it from this work, falsified and corrupted it in many places.—7. *Συμπόσιον φιλοσόφων* ("Banquet of Philosophers"). The object which Xenophon had in view in writing this piece, which is a *chef d'œuvre* in point of style, was to place in the clearest light the purity of his master's principles relative to friendship and love, and to render a just homage to the innocence of his moral character. Some of the ancients were persuaded that Xenophon had another and secondary object, that of opposing his "Banquet" to Plato's dialogue which bears the same title, and in which Socrates had not been depicted, as Xenophon thought, with all the simplicity that marked his character. Schneider and Weiske, two celebrated commentators on Xenophon, as well as an excellent judge in matters of taste, the distinguished Wieland (*Attische Museum*, vol. 4, p. 76), have adopted this same opinion; but it has been attacked by two other scholars, Boeckh and Ast. The former believes that Plato wrote his dialogue after having read the *Banquet* of Xenophon, and that, in place of Socrates as he really was, the founder of the Academy wished to trace, under the name of this philosopher, the beau idéal of a true sage, such as he had conceived the character to be. (*Commentatio Academica de simulate quæ Platoni cum Xenophonte intercessisse fertur*, Berol., 1811, 4to.) Ast goes still farther, and pretends to find in the *Banquet* of Xenophon sure indications of its having been one of the works of his youth. (*Ast, Platons Leben und Schriften*, p. 314.)—8. *Ἱέρων ἡ Τύραννος* ("Hiero"), a dialogue between the Syracusan monarch and Simonides, in which Xenophon compares the troublesome life of a prince with the tranquil existence of a private individual, intermingling from time to time observations on the art of governing.—9. *Οἰκονομικὸς λόγος* ("Discourse on Economy"). This piece is in the form of a dialogue between Socrates and Critobulus, son of Crito, and one of his disciples. Some critics have regarded it as the fifth book of the *Memoirs*. It is less a theory of, than a eulogium on, rural economy, or, in other words, a treatise on morality as applied to rural and domestic life. It contains also some interesting and instructive details relative to the state of agriculture among the Greeks: we find in it, likewise, some anecdotes respecting the younger Cyrus. Cicero translated this work into Latin, and Virgil has drawn from it the materials for some passages in his *Georgics*.—11. *Περὶ ἵππων* ("On the Knowledge of Horses"). A very useful treatise, in which Xenophon makes known the marks by which a good horse may be discovered. He cites, abridges, and completes the work of a certain Simon, who had written on this subject before him.—11. *Ἱππάρχικος* ("Hipparchicus, or the duties of an officer of cavalry"). After having said something respecting the knowledge of horses necessary for an officer of cavalry to have, Xenophon lays down the rules that ought to guide in the selection of the officer himself, and then traces the general duties appertaining to the station.—12. *Κυνήγετικος* ("Of the chase"). A eulogium on the exercise of hunting, after which Xenophon unfolds the theory of the sport.—13. *Ἠέροι ἡ περὶ ποσόδων* ("On the revenues of Attica"). The object of this treatise is to show that

the revenues of Attica, if well regulated, are sufficient for its population, without the need of the Athenians rendering themselves odious by exactions from their allies or subjects.—14. *Λακεδαιμονίων πολιτεία* ("Government of the Lacedæmonians").—15. *Ἀθηναίων πολιτεία* ("Government of the Athenians"). These two small works are very probably not Xenophon's.—We have also seven letters of this same writer.—The best editions of the works of Xenophon are, that of Schneider, *Lips.*, 1800, reprinted at Oxford, 1812, 6 vols. 8vo, and that of Weiske, *Lips.*, 1798–1802, 5 vols. 8vo. There are numerous editions also of the separate works, some very useful.—II. A Greek romance writer, a native of Ephesus, whose era and history are equally unknown. With the exception of Suidas, no ancient writer makes any mention of him, not even Photius, who has recorded the names of so many writers of the middling class. The Baron di Lacella places him in the age of the Antonines, and others in the fourth and fifth centuries. Peerlkamp, on the other hand, one of his editors, considers him to be the earliest of the Greek romancers, and fancies that he is able to detect the imitations of the rest. The same author affirms that Xenophon is an assumed name, and, farther, that no Greek romancer, with the exception of Heliodorus, has written in his real name. Mr. Dunlop, in his *History of Fiction*, mentions three Xenophons, who lived about the time of Chariton; but Chariton must have lived in or after the fifth century, at a distance of no less than 300 years from the time in which we have placed Xenophon, on the best authorities we can find. The three Xenophons, according to Mr. Dunlop, were Antiochus, Cyprius, and Ephesus, and their works, "*Babyloniaca*," "*Cyprica*," and "*Ephesiaca*." Of these, only the last has been published. It is entitled *Ἐφεσιακὰ τὰ κατὰ Ἀνδρίαν καὶ Ἀδρόκωπην* ("Ephesiaca, or the Loves of Adrocomes and Antia"). The story is commonplace, and yet improbable; but the style is simple, and the action busy without confusion. For a long time the existence of this work was denied. In the fifteenth century, Angelo Poliziano quoted a passage from this romance; but the incredulity of the learned was still manifested two centuries after. At length, in 1786, an Italian translation was published by Antonio Maria Salvini, and in the same year the Greek text appeared in print. Even this, however, was insufficient; for, eight years after, we find Lenglet du Fresnoy, in his pseudonymous work on the customs of the Romans, asserting that "neither the original Greek, nor any other version," was known. The best edition of Xenophon of Ephesus is that of Peerlkamp, *Harlem*, 1818, 4to. There is also a good edition by Passow, *Lips.*, 1833, 12mo. (*Foreign Quarterly Review*, vol. 5, p. 124, *seqq.*)

XERXES, 1. son and successor of Darius Hystaspis on the throne of Persia. He was, in fact, the second son of that monarch, but the first born unto him of Atossa, the daughter of Cyrus, whom Darius had married after he came to the throne. The elder son was Artabanus, born unto Darius while yet in a private station. The two princes contended for the empire, Artabanus grounding his claim on the common law of inheritance, Xerxes, the younger, on his descent from the founder of the monarchy. Demaratus, the exiled king of Sparta, aided Xerxes with his counsels, and suggested to him another argument, drawn from the Spartan rule of succession, by which a son born after the accession of a king was preferred to his elder brother. Darius decided in his favour, and declared him his heir; swayed, perhaps, much more by the influence of Atossa, which was always great with him, than by reason or usage. In the following year (B.C. 485), before he had ended his preparations against Egypt and Attica, he died, and Xerxes ascended the throne. Thus the Persian sceptre passed from the hands of a

please who had acquitted it by his boldness and persistence, to one born in the palace, the favourite son of the favourite queen, who had been accustomed, from his infancy, to regard the kingdom as his inheritance, perhaps to think that the blood of Cyrus which flowed in his veins raised him above his father. Bred up in the pompous luxury of the Persian court, among slaves and women, a mark for their flattery and intrigues, he had none of the experience which Darius had gained in that period of his life when Syloson's cloak was a welcome present. He was probably inferior to his father in ability; but the difference between them in fortune and education seems to have left more traces in their history than any disparity of nature. Ambition was not the prominent feature in the character of Xerxes; and, had he followed his unbiased inclination, he would, perhaps, have been content to turn the preparations of Darius against the revolted Egyptians, and have abandoned the expedition against Greece, to which he was not spurred by any personal motives. But he was surrounded by men who were led by various passions and interests to desire that he should prosecute his father's plans of conquest and revenge. Mardonius was eager to renew an enterprise in which he had been foiled through unavoidable mischance, not through his own incapacity. He had reputation to retrieve, and might look forward to the possession of a great European satrapy, at such a distance from the court as would make him almost an absolute sovereign. He was warmly seconded by the Greeks, who had been drawn to Susa by the report of the approaching invasion of their country, and who wanted foreign aid to accomplish their designs. The Theban house of the Alcædæ, either because they thought their power insecure, or expected to increase it by becoming vassals of the Persian king, sent their emissaries to invite him to the conquest of Greece. The exiled Pisistratids had no other chance for the recovery of Athens. They had brought a man named Onomacritus with them to court, who was one of the first among the Greeks to practise an art, afterward very common, that of forging prophecies and oracles. While their family ruled at Athens, he had been detected in fabricating verses, which he had interpolated in a work ascribed to the ancient seer Musæus, and Hipparchus, before his patron, had banished him from the city. But the exiles saw the use they might make of his talents, and had taken him into their service. They now recommended him to Xerxes as a man who possessed a treasure of prophetic knowledge, and the young king listened with unsuspecting confidence to the encouraging predictions which Onomacritus drew from his inexhaustible stores. These various engines at length prevailed. The imagination of Xerxes was inflamed with the prospect of rivalling or surpassing the achievements of his glorious predecessors, and of extending his dominion to the ends of the earth. (*Herod.*, 7, 8.) He resolved on the invasion of Greece. First, however, in the second year of his reign, he led an army against Egypt, and brought it again under the Persian yoke, which was purposely made more burdensome and galling than before. He intrusted it to the care of his brother Artabanus, and then returned to Persia, and bent all his thoughts towards the West. Only one of his counsellors, his uncle Artabanus, is said to have been wise and honest enough to endeavour to divert him from the enterprise, and especially to dissuade him from risking his own person in it. If any reliance could be placed on the story told by Herodotus about the deliberations held on this question in the Persian cabinet, we might suspect that the influence and arts of the Magian priesthood, which we find in this reign rising in credit, had been set at work by the adversaries of Artabanus to counteract his influence over the mind of his nephew, and to confirm Xerxes in his martial mood. The vast preparations were continued with re-

doubled activity, to raise an armament worthy of the presence of the king. His aim was not merely to collect a force sufficient to ensure the success of his undertaking, and to scare away all opposition, but also, and perhaps principally, to set his whole enormous power in magnificent array, that he might enjoy the sight of it himself, and display it to the admiration of the world. For four years longer Asia was still kept in restless turmoil: no less time was needed to provide the means of subsistence for the countless host that was about to be poured out upon Europe. Besides the stores that were to be carried in the fleet which was to accompany the army, it was necessary that magazines should be formed along the whole line of march as far as the confines of Greece. But, in addition to these prudent precautions, two works were begun, which scarcely served any other purpose than that of showing the power and majesty of Xerxes, and proving that he would suffer no obstacles to bar his progress. It would have been easy to transport his troops in ships over the Hellespont; but it was better suited to the dignity of the monarch, who was about to unite both continents under his dominion, to join them by a bridge laid upon the subject channel, and to march across as along a royal road. The storm that had destroyed the fleet which accompanied Mardonius in his unfortunate expedition, had made the coast of Athos terrible to the Persians. The simplest mode of avoiding this formidable cape would have been to draw their ships over the narrow, low neck that connects the mountain with the mainland. But Xerxes preferred to leave a monument of his greatness and of his enterprise, in a canal cut through the isthmus, a distance of about a mile and a half. This work employed a multitude of men for three years. The construction of the two bridges which were thrown across the Hellespont was intrusted to the skill of the Phœnicians and Egyptians. When these preparations were drawing to a close, Xerxes set forth for Sardis, where he designed to spend the following winter, and to receive the re-enforcements which he had appointed there to join the main army (B.C. 481). During his stay at Sardis, the Phœnician and Egyptian engineers completed their bridges on the Hellespont; but the work was not strong enough to resist a violent storm, which broke it to pieces soon after it was finished. How far this disaster was owing to defects in its construction, which might have been avoided by ordinary skill and foresight, does not appear. But Xerxes is said to have been so much angered by the accident that he put the architects to death. Such a burst of passion would be credible enough in itself, and is only rendered doubtful by the extravagant fables that gained credit on the subject among the Greeks, who, in the bridging of the *sacred Hellespont*, saw the beginning of a long career of audacious impiety, and gradually transferred the fastenings with which the passage was finally secured into fetters and scourges, with which the barbarian, in his madness, had thought to chastise the aggression of the rebellious stream. The construction of new bridges was committed to other engineers, perhaps to Greeks; but their names have not passed down, like that of Mandrocles. By their art two firm and broad causeways were made to stretch from the neighbourhood of Abydus to a projecting point in the opposite shore of the Chersonesus, resting each on a row of ships, which were stayed against the strong current that bore upon them from the north by anchors and by cables fastened to both sides of the channel; the length was not far short of a mile. When all was in readiness, the mighty armament was set in motion. Early in the spring (B.C. 480), Xerxes began his march from Sardis, in all the pomp of a royal progress. The baggage led the way: it was followed by the first division of the armed crowd that had been brought together from the tributary nations; a motley throng, in-

clad in many strange varieties of complexion, dress, and language, commanded by Thessalian generals, but retaining each tribe its national armour and mode of fighting. An interval was then left, after which came 1000 picked Persian cavalry, followed by an equal number of spearmen, whose lances, which they carried with the points turned downward, ended in knobs of gold. Next, ten sacred horses, of the Nisaman breed, were led in gorgeous caparisons, preceding the chariot of the Persian Jove, drawn by eight white horses, the driver following on foot. Then came the royal chariot, also drawn by Nisaman horses, in which Xerxes sat in state; but from time to time he exchanged it for an easier carriage, which sheltered him from the sun and the changes of the weather. He was followed by two bands of horse and foot, like those which went immediately before him, and by a body of 10,000 Persian infantry, the flower of the whole army, who were called the Immortals, because their number was kept constantly full. A thousand of them, who occupied the outer ranks, bore lances knobbed with gold; those of the rest were similarly ornamented with silver. They were followed by an equal number of Persian cavalry. The remainder of the host brought up the rear. In this order the army reached Abydos, and Xerxes, from a lofty throne, surveyed the crowded sides and bosom of the Hellespont, and the image of a sea-fight; a spectacle which Herodotus might well think sufficient to have moved him with a touch of human sympathy. The passage did not begin before the king had prayed to the rising sun, and had tried to propitiate the Hellespont itself by libations, and by casting into it golden vessels and a sword. After the bridges had been strewn with myrtle and purified with incense, the Ten Thousand Immortals, crowned with chaplets, led the way. The army crossed by one bridge, the baggage by the other; yet the living tide flowed without intermission for seven days and seven nights before the last man, as Herodotus heard, the king himself, the tallest and most majestic person in the host, had arrived on the European shore. In the great plain of Doriscus, on the banks of the Hebrus, an attempt was made to number the land force. A space was enclosed large enough to contain 10,000 men; into this the myriads were successively poured and discharged, till the whole mass had been rudely counted. They were then drawn up according to their natural divisions, and Xerxes rode in his chariot along the ranks, while the royal scribes recorded the names, and most likely the equipments, of the different races. It is an ingenious and probable conjecture of Heeren's (*Ideen*, 1, p. 137), that this authentic document was the original source from which Herodotus drew his minute description of their dress and weapons. The real military strength of the armament was almost lost among the undisciplined herds which could only impede its movements as well as consume its stores. The Persians were the core of both the land and sea force; none of the other troops are said to have equalled them in discipline or in courage; and the four-and-twenty thousand men who guarded the royal person were the flower of the whole nation. Yet these, as we see from their glittering armour, as well as from their performances, were much better fitted for show than for action; and of the rest, we hear that they were distinguished from the mass of the army, not only by their superior order and valour, but also by the abundance of gold they displayed, by the train of carriages, women, and servants that followed them, and by the provisions set apart for their use. Though Xerxes himself was elated by the spectacle he viewed on the plains and the shores of Doriscus, it must have filled the clear-sighted Greeks who accompanied him with misgivings as to the issue of the enterprise. The language of Demaratus, in the conversation which Herodotus supposes him to have had with Xerxes after the review,

though it was probably never uttered, expressed thoughts which could scarcely fail to occur to the Spartan. Poverty, he is made to observe, was the endowment which Greece had received from nature; but law and reason had armed her with instruments, with which she had cultivated her barren inheritance, and might still hope to repel the invasion even of Xerxes and his host. (*Thirlwall's History of Greece*, vol. 2, p. 249, *seqq.*)—Our limits will not allow us to enter here into a detail of the movements of Xerxes; and, besides, we have already given, under other articles, a brief summary of the campaign. (*Vid.* Artemisium, Thermopylae, Salamis, &c.)—After the disastrous defeat at Salamis, Xerxes felt desirous of escaping from a state of things which was now becoming troublesome and dangerous, and Mardonius saw that he would gladly listen to any proposal that would facilitate his return. He was aware, that, without a fleet, the war might probably be tedious, in which case the immense bulk of the present army would be only an encumbrance, from the difficulty of subsisting it. Besides, the ambition of Mardonius was flattered with the idea of his becoming the conqueror of Greece, while he feared that, if he now returned, he might be made answerable for the ill success of the expedition which he had advised. He therefore proposed to Xerxes to return into Asia with the body of the army, leaving himself, with 300,000 of the best troops, to complete the conquest of Greece. Xerxes assented, and the army having retired into Boeotia, Mardonius made his selection, and then, accompanying the king into Thessaly, there parted from him, leaving him to pursue his march towards Asia, while he himself prepared to winter in Thessaly and Macedonia.—Widely different from the appearance of the glittering host, which a few months before had advanced over the plains of Macedonia and Thrace to the conquest of Greece, was the aspect of the crowd which was now hurrying back along the same road. The splendour, the pomp, the luxury, the waste, were exchanged for disaster and distress, want and disease. The magazines had been emptied by the careless profusion or peculation of those who had the charge of them; the granaries of the countries traversed by the retreating multitude were unable to supply its demands; ordinary food was often not to be found; and it was compelled to draw a scanty and unwholesome nourishment from the herbage of the plains, the bark and leaves of the trees. Sickness soon began to spread its ravages among them, and Xerxes was compelled to consign numbers to the care of the cities that lay on his road, already impoverished by the cost of his first visit, in the hope that they would tend their guests, and would not sell them into slavery if they recovered. The passage of the Strymon is said to have been peculiarly disastrous. The river had been frozen in the night hard enough to bear those who arrived first. But the ice suddenly gave way under the heat of the morning sun, and numbers perished in the waters. It is a little surprising that Herodotus, when he is describing the miseries of the retreat, does not notice this disaster, which is so prominent in the narrative of the Persian messenger in Æschylus. There can, however, be no doubt as to the fact; and perhaps it may furnish a useful warning not to lay too much stress on the silence of Herodotus, as a ground for rejecting even important and interesting facts which are only mentioned by later writers, though such as he must have heard of, and might have been expected to relate. It seems possible that the story he mentions of Xerxes embarking at Eion (8, 118) may have arisen out of the tragical passage of the Strymon.—In forty-five days after he had left Mardonius in Thessaly, he reached the Hellespont; the bridges had been broken up by foul weather, but the fleet was there to carry the army over to Abydos. Here it rested from its fatigues, and found

plentiful quarters; but intemperate indulgence rendered the sudden change from scarcity to abundance almost as pernicious as the previous famine. The remnant that Xerxes brought back to Sardis was a wreck, a fragment, rather than a part of his huge host. —The history of Xerxes, after the termination of his Grecian campaign, may be comprised in a brief compass. He gave himself up to a life of dissolute pleasure, and was slain by Artabanus, a captain of the royal guards, B.C. 464. (*Vid.* Artabanus II.—*Thirlwall's History of Greece*, vol. 2, p. 315, *seq.*)—II. A son of Artaxerxes Mnemon, who succeeded his father, but was slain, after a reign of forty-five days, by his brother Sogdianus. (*Vid.* Sogdianus.)

Zoïs, a city of Egypt, situate on an island in the Phatnetic branch of the Nile, below Sebenytus. Mannert takes it to be the same with the Papremis of Herodotus (*Geogr.*, vol. 10, p. 571).

ΖΟΥΡΟΣ, a son of Hellen, grandson of Deucalion. (*Vid.* Hellas, § 1).

Z.

ZABĀRUS, a river in the northern part of Assyria, rising in Mount Zagrus, and falling into the Tigris. It is called Zabatus by Xenophon, but otherwise Zabrus or Zerbis, and traverses a large portion of Assyria. This stream was also termed Lycus (Λύκος), or "the wolf," by the Greeks; but it has resumed its primitive denomination of Zab, or, according to some modern travellers, Zarb. (*Polyb.*, 5, 51.—*Amm. Marc.*, 23, 14.—*Xen.*, *Anab.*, 2, 5.—*Plin.*, 6, 26.) Farther down, another river, named Zabrus Minor, and called by the Macedonians Caprus (Κάρπος), or "the bear," is also received by the Tigris, and is now called by the Turks *Altinson*, or the river of gold. (*Polyb.*, 5, 51.)

ZABDIŌNĒ, a district in Mesopotamia, in which was situated a city named Zabda or Bezabda. It was yielded to the Persians by Jovian. (*Amm. Marc.*, 25, 7.)

ZABUS, a river of Assyria, falling into the Tigris. (*Vid.* Zabatus.)

ΖΑΚΥΝΘΟΣ (Zákynthos), an island in the Ionian Sea, to the west of the Peloponnesus, and below Cephalonia. Pliny affirms that it was once called Hyrie; but this fact is not recorded by Homer, who constantly uses the former name (*Il.*, 2, 634.—*Od.*, 1, 246), which was said to be derived from Zacynthus, the son of Dardanus, an Arcadian chief. (*Pausan.*, 8, 24.) A very ancient tradition ascribed to Zacynthus the foundation of Saguntum in Spain, in conjunction with the Rutuli of Ardea. (*Liv.*, 21, 7.) Thucydides informs us that, at a later period, this island received a colony of Achæans from Peloponnesus (2, 66.) Not long before the Peloponnesian war, the island was reduced by Tolmides, the Athenian general, from which period we find Zacynthus allied to, or, rather, dependant upon, Athens. It subsequently fell into the hands of Philip III., king of Macedon (*Polyb.*, 5, 4), and was afterward occupied by the Romans, under Val. Lævinus, during the second Punic war. On this occasion, the chief city of the island, which bore the same name, was captured, with the exception of its citadel. (*Liv.*, 28, 24.) Zacynthus, however, was subsequently restored to Philip. It was afterward sold to the Achæans, and given up by them to the Romans on its being claimed by the latter. The modern name is Zante. (*Cramer's Anc. Greece*, vol. 2, p. 56, *seqq.*)

ZALEUCUS, a lawgiver in Magna Græcia, and the founder of the Locrian state in that quarter of Italy. Eusebius places him in Olymp. 29, which is 40 years before Draco, and 60 before Pythagoras was born. (*Bentley, on Phalaris*, vol. 1, p. 390, *ed. Dyce.*) According to the ordinary account, he was of obscure

birth, and in his youth lived in servitude, in the capacity of a shepherd. But his extraordinary abilities and merit obtained him his freedom, and at length raised him to the chief magistracy. The laws which he framed were severe; but they were so well adapted to the situation and manners of the Locrians, that their constitution was, for several ages, highly celebrated. So vigorous was the discipline of Zaleucus, that he prohibited the use of wine except in cases where it was prescribed as a medicine; and he ordained that adulterers should be punished with the loss of their eyes. When his own son had subjected himself to this penalty, Zaleucus, in order, at the same time, to preserve the authority of the laws, and show some degree of paternal lenity, shared the punishment with the offender, and, that he might only be deprived of one eye, submitted to lose one of his own. (*Clem. Alex., Strom.*, 1, p. 309.—*Val. Max.*, 1, 2, 4.—*Id.*, 6, 5, 3.—*Diog. Laert.*, 8, 16.—*Stob.*, *Serm.*, 39.)—Bentley throws doubt on the existence of such a person as Zaleucus, and regards his code of laws as the forgery of a sophist. (*Diss. on Phalaris*, vol. 1, p. 378, *ed. Dyce.*) Against this opinion, however, see Fabricius, *Biblioth. Gr.*, lib. 2, c. 14, and Warburton, *Div. Leg. of Moses*, vol. 1, book, 2, § 3. (*Dyce ad Bent.*, l. c.)

ZAMOLXIS, a celebrated personage among the Scythians, whom many represent not only as the father of wisdom with respect to the Scythians, but as the teacher of the doctrines of immortality and transmigration to the Celtic Druids and to Pythagoras. (*Origen., Philos.*, c. 25, p. 170.—*Suid.*, s. v.) Others suppose him to have been a slave of Pythagoras, who, after having attended him into Egypt, obtained his manumission, and taught his master's doctrine among the Getæ. But there can be no doubt that the doctrine of immortality was known to the northern nations long before the time of Pythagoras; and Herodotus, mentioning a common tradition, that Zamolxis was a Pythagorean, expressly says (4, 95), that he flourished at a much earlier period than Pythagoras. The whole story of the connexion of Zamolxis with Pythagoras seems to have been invented by the Pythagoreans, to advance the fame of their master. (*Engelid, Hist. Philos.*, vol. 1, p. 118.)

ZAMA, I. a city of Africa, called Zama Regia, and lying some distance to the southwest of Carthage, and to the northwest of Hadrumetum. Sallust describes it as a large place, and strongly fortified. It became the residence subsequently of Juba, and the deposite for his treasures. (*Auct., Bell. Afr.*, 91.) Strabo speaks of it as being in his days a ruined city; it probably met with this fate during the civil wars. It appears to have been afterward rebuilt, and to have become the seat of a bishopric. The modern *Zammaria* marks the ancient site. (*Mannert*, vol. 10, pt. 2, p. 365.)—II. A city of Numidia, five days' journey west of Carthage, according to Polybius (16, 5). Near this place was fought the famous battle between the elder Africanus and Hannibal. (*Mannert, Geogr.*, vol. 10, pt. 2, p. 366.)

ZAROLĒ, the earlier name of Messina in Sicily. (*Vid.* Messina.)

ZARANGĒ or DRANGĒ, a nation of Upper Asia, southeast of Aria, having for their capital Prophisasia, now Zarang. (*Plin.*, 6, 23.—*Arrian, Exp. Alex.*, 3, 2.) Some authorities, however, make the Zarangæ only a part of the Drangæ. (*Bischoff und Müller, Wörterb. der Geogr.*, p. 1013.)

ZARTAPĀ BACTRA, the capital of Bactriana, on the river Bactrus, now Balkh. (*Plin.*, 6, 16.)

ZELA, a city of Pontus, southeast of, and not far from, Amasea. It was originally a village, but Pompey increased it, and raised it to the rank of a city. Here Mithradates defeated the Romans under Triarius; and here, too, Cæsar defeated Pharnaces. It was in writing home word of this victory that Cæsar made

use of the well-known expressions, "*Veni, vidi, vici.*"—The modern village of *Zile* or *Ziel* occupies the site of the ancient city. (*Plin.*, 63.—*Hirtius*, B. A., 72.)

ZENO, I. the founder of the sect of the Stoics, born at Citium, in the island of Cyprus. His father was by profession a merchant, but, discovering in his son a strong propensity towards learning, he early devoted him to the study of philosophy. In his mercantile capacity, the former had frequent occasions to visit Athens, where he purchased for the young Zeno several of the writings of the most eminent Socratic philosophers. These he read with great avidity; and, when he was about thirty years of age, he determined to take a voyage to a city which was so celebrated both as a mart of trade and of science. Whether this voyage was in part mercantile, or wholly undertaken for the sake of conversing with those philosophers whose writings Zeno had long admired, is uncertain. If it be true, as some writers relate, that he brought with him a valuable cargo of Phœnician purple, which was lost by shipwreck upon the coast of Attica, this circumstance will account for the facility with which he at first attached himself to a sect whose leading principle was contempt of riches. Upon his first arrival in Athens, going accidentally into the shop of a bookseller, he took up a volume of the commentaries of Xenophon, and, after reading a few passages, was so much delighted with the work, and formed so high an idea of its author, that he asked the bookseller where he might meet with such men. Crates, the Cynic philosopher, happening at that instant to be passing by, the bookseller pointed to him, and said, "Follow that man." Zeno soon found an opportunity of attending upon the instructions of Crates, and was so well pleased with his doctrine that he became one of his disciples. But, though he highly admired the general principles and spirit of the Cynic school, he could not easily reconcile himself to their peculiar manners. Besides, his inquisitive turn of mind would not allow him to adopt that indifference to every scientific inquiry which was one of the characteristic distinctions of the sect. He therefore attended upon other masters, who professed to instruct their disciples in the nature and causes of things. When Crates, displeased at his following other philosophers, attempted to drag him by force out of the school of Stilpo, Zeno said to him, "You may seize my body, but Stilpo has laid hold of my mind." After continuing to attend upon the lectures of Stilpo for several years, he passed over to other schools, particularly those of Xenocrates and Diodorus Chironus. By the latter he was instructed in dialectics. At last, after attending almost every other master, he offered himself as a disciple of Polemo. This philosopher appears to have been aware that Zeno's intention in thus removing from one school to another was to collect materials from various quarters for a new system of his own; for, when he came into Polemo's school, the latter said to him, "I am no stranger to your Phœnician arts, Zeno; I perceive that your design is to creep slyly into my garden and steal away my fruit." Polemo was not mistaken in his opinion. Having made himself master of the tenets of others, Zeno determined to become the founder of a new sect. The place which he made choice of for his school was called the *Pæcilis* (*Ποικίλη Σκῆπη*), or *Painted Porch*; a public portico, so called from the pictures of Polygnatus, and other eminent masters, with which it was adorned. This portico, being the most famous in Athens, was called, by way of distinction, *Σκῆπη*, the *Porch*. It was from this circumstance that the followers of Zeno were called *Stoics*, i. e., *the men of the Porch*. Zeno excelled in that kind of subtle reasoning which was then popular. At the same time, he taught a strict system of moral doctrine, and exhibited a pleasing picture of moral dis-

cipline in his own life. The Stoic sect, in fact, was a branch of the Cynic, and, as far as respected morals, differed from it more in words than in reality. Its founder, while he avoided the singularities of the Cynics, retained the spirit of their moral doctrine: at the same time, from a diligent comparison of the tenets of other masters, he framed a new system of speculative philosophy. It is not at all surprising, therefore, that he obtained the applause and affection of numerous followers, and even enjoyed the favour of the great. Antigonus Gonatas, king of Macedon, while he was resident at Athens, attended his lectures, and, upon his return, earnestly invited him to his court. He possessed so large a share of esteem among the Athenians, that, on account of his approved integrity, they deposited the keys of their citadel in his hands. They also honoured him with a golden crown, and a statue of brass. Among his countrymen, the inhabitants of Cyprus, and with the Sidonians, from whom his family was derived, he was likewise highly esteemed. In his person Zeno was tall and slender; his aspect was severe, and his brow contracted. His constitution was feeble, but he preserved his health by great abstemiousness. The supplies of his table consisted of figs, bread, and honey; notwithstanding which, he was frequently honoured with the company of great men. He paid more attention to neatness and decorum in his personal appearance than the Cynic philosophers. In his dress, indeed, he was plain, and in his expenses frugal; but this is not to be imputed to avarice, but to a contempt of external magnificence. He showed as much respect to the poor as to the rich, and conversed freely with persons of the meanest occupations. He had only one servant, or, according to Seneca, none. Although Zeno's sobriety and continence were even proverbial, he was not without enemies. Among his contemporaries, several philosophers of great ability and eloquence employed their talents against him. Arceilaus and Carneades, the founders of the Middle Academy, were his professed opponents. Towards the close of his life he found another powerful antagonist in Epicurus, whose temper and doctrines were alike inimical to the severe gravity and philosophical pride of the Stoic sect. Hence mutual invectives passed between the Stoics and other sects, to which little credit is due. (*Vid.* remarks under the article *Epicurus*.) Zeno lived to the extreme age of 98, and at last, in consequence of an accident, put an end to his life. As he was walking out of his school, he fell down, and in the fall broke one of his fingers. He was so affected, upon this, with a consciousness of infirmity, that, striking the earth, he exclaimed, *Ἐρχομαι, ῥί μ' ἄβεις*; "*I am coming, why callest thou me?*" and immediately went home and strangled himself. He died B.C. 264. The Athenians, at the request of Antigonus, erected a monument to his memory in the Ceramicus. From the particulars that have been related concerning Zeno, it will not be difficult to perceive what kind of influence his circumstances and character must have had upon his philosophical system. If his doctrines be diligently compared with the history of his life, it will appear that, having attended upon many eminent preceptors, and been intimately conversant with their opinions, he compiled out of their various tenets a heterogeneous system, on the credit of which he assumed to himself the title of a founder of a new sect. When he resolved, for the sake of establishing a new school, to desert the philosophy of Pythagoras and Plato, in which he had been perfectly instructed by Xenocrates and Polemo, it became necessary either to invent opinions entirely new, or to give an air of novelty to old systems by the introduction of new terms and definitions. Of these two undertakings, Zeno prudently made choice of the easier. Cicero says concerning him, that he had little reason for de-

serting his masters, especially those of the Platonic school, and that he was not so much an inventor of new opinions as of new terms. That this was the real character of the Porch will fully appear from an attentive perusal of the clear and accurate comparison which Cicero has drawn between the doctrines of the Old Academy and those of the Stoics, in his *Academic Questions*. As to the moral doctrine of the Cynic sect, to which Zeno adhered to the last, there can be no doubt that he transferred it almost without alloy into his own school. In morals, the principal difference between the Cynics and the Stoics was, that the former disdained the cultivation of nature, the latter affected to rise above it. On the subject of physics, Zeno received his doctrine from Pythagoras and Heraclitus through the channel of the Platonic school, as will fully appear from a careful comparison of their respective systems. The moral part of the Stoical philosophy partook of the defects of its origin. It may as justly be objected against the Stoics as the Cynics, that they assumed an artificial severity of manners and a tone of virtue above the condition of man. Their doctrine of moral wisdom was an ostentatious display of words, in which little regard was paid to nature and reason. It professed to raise human nature to a degree of perfection before unknown; but its real effect was merely to amuse the ear and captivate the fancy with fictions that can never be realized. The Stoical doctrine concerning nature is as follows: according to Zeno and his followers, there existed from eternity a dark and confused chaos, in which were contained the first principles of all future beings. This chaos being at length arranged, and emerging into variable forms, became the world as it now subsists. The world, or nature, is that whole which comprehends all things, and of which all things are parts and members. The universe, though one whole, contains two principles, distinct from elements, one passive and the other active. The passive principle is pure matter without qualities; the active principle is reason, or God. This is the fundamental doctrine of the Stoics concerning nature. If the doctrine of Plato, which derives the human mind from the soul of the world, has a tendency towards enthusiasm, much more must this be the case with the Stoical doctrine, which supposes that all human souls have immediately proceeded from, and will at last return into, the divine nature. As regards a divine providence, if we compare the popular language of the Stoics upon this head with their general system, and explain the former with the fundamental principles of the latter, we shall find that the agency of deity is, according to them, nothing more than the active motion of a celestial ether, or fire, possessed of intelligence, which at first gave form to the shapeless mass of gross matter, and being always essentially united to the visible world, by the same necessary agency, preserves its order and harmony. Providence, in the Stoic creed, is only another name for absolute necessity, or fate, to which God and matter, or the universe, which consists of both, is immutably subject. The Stoic doctrine of the resurrection of the body, upon which Seneca has written with so much elegance, must not be confounded with the Christian doctrine; for, according to the Stoics, men return to life, not by the voluntary appointment of a wise and merciful God, but by the law of fate; and are not renewed for the enjoyment of a better and happier condition, but drawn back into their former state of imperfection and misery. Accordingly, Seneca says, "This restoration many would reject, were it not that their renovated life is accompanied with a total oblivion of past events." Upon the principles of physics depends the whole Stoic doctrine of morals. Conceiving God to be the principal part of nature, by whose energy all bodies are formed, moved, and arranged, and human reason to be a portion of the

Divinity, it was their fundamental doctrine in ethics, that, in human life, one ultimate end ought for its own sake to be pursued; and that this end is to live agreeably to nature, that is, to be conformed to the law of fate by which the world is governed, and to the reason of that divine and celestial fire which animates all things. Since man is himself a microcosm, composed, like the world, of matter and a rational principle, it becomes him to live as a part of the great whole, and to accommodate all his desires and pursuits to the general arrangement of nature. Thus, to live according to nature, as the Stoics teach, is virtue, and virtue is itself happiness; for the supreme good is to live according to a just conception of the real nature of things, choosing that which is itself eligible, and rejecting the contrary. Every man, having within himself a capacity of discerning and following the law of nature, has his happiness in his own power, and is a divinity to himself. Wisdom consists in distinguishing good from evil. Good is that which produces happiness according to the nature of a rational being. Since those things only are truly good which are becoming and virtuous, and virtue, which is seated in the mind, is alone sufficient for happiness, external things contribute nothing towards happiness, and, therefore, are not in themselves good. The wise man will only value riches, honour, beauty, and other external enjoyments as means and instruments of virtue; for, in every condition, he is happy in the possession of a mind accommodated to nature. Pain, which does not belong to the mind, is no evil. The wise man will be happy in the midst of torture. All external things are indifferent, since they cannot affect the happiness of man. Every virtue being a conformity to nature, and every vice a deviation from it, all virtues and vices are equal. One act of beneficence or justice is not more truly so than another; one fraud is not more a fraud than another; therefore there is no difference in the essential nature of moral actions, except that some are vicious and others virtuous. This is the doctrine which Horace ridicules in the 4th satire, 1st book. The Stoics advanced many extravagant assertions concerning their wise man; for example, that he feels neither pain nor pleasure; that he exercises no pity; that he is free from faults; that he is divine; that he does all things well; that he alone is great, noble, ingenuous; that he is a prophet, a priest, a king, and the like. These paradoxical vauntings are humorously ridiculed by Horace. In order to understand all this, we must bear in mind that the Stoics did not suppose such a man actually to exist, but that they framed in their imagination an image of perfection, towards which every man should continually aspire. All the extravagant notions which are to be found in their writings on this subject may be referred to their general principle of the entire sufficiency of virtue to happiness, and the consequent indifference of all external circumstances. The sum of man's duty, according to the Stoics, with respect to himself, is to subdue his passions of joy and sorrow, hope and fear, and even pity. He who is, in this respect, perfectly master of himself, is a wise man; and, in proportion as we approach a state of apathy, we advance towards perfection. A wise man, moreover, may justly and reasonably withdraw from life whenever he finds it expedient; not only because life and death are among those things which are in their nature indifferent, but also because life may be less consistent with virtue than death. Concerning the whole moral system of the Stoics, it must be remarked, that, although deserving of high encomium for the purity, extent, and variety of its doctrines, and although it must be confessed that, in many select passages of the Stoic writings, it appears exceedingly brilliant, it is nevertheless founded in false notions of nature and of man, and is raised to a degree of refinement which is

extravagant and impracticable. The piety which it teaches is nothing more than a quiet submission to irresistible fate; the self-command which it enjoins annihilates the best affections of the human heart; the indulgence which it grants to suicide is inconsistent, not only with the general principles of piety, but even with that constancy which was the height of Stoical perfection; and even its moral doctrine of benevolence is timorously qualified with the fanciful principle, which lay at the foundation of the whole Stoical system, that every being is a portion of one great whole, from which it would be unnatural and impious to attempt a separation. (*Enfield's History of Philosophy*, vol. 1, p. 315, seq.)—II. A philosopher, a native of Tarsus, or, according to some, of Sidon, and the immediate successor of Chrysippus in the Stoic school. He does not appear to have receded in any respect from the Stoic tenets, except that he withheld his assent to the doctrine of the final conflagration. (*Diog. Laert.*, 7, 38.—*Euseb.*, *Præp. Ev.*, 16, 18.)—III. A philosopher of Elea, called the Eleatic, to distinguish him from Zeno the Stoic. He flourished about 444 B.C. Zeno was a zealous friend of civil liberty, and is celebrated for his courageous and successful opposition to tyrants; but the inconsistency of the stories related by different writers concerning him in a great measure destroys their credit.—The invention of the dialectic art has been improperly ascribed to him; but there can be no doubt that this philosopher, and other metaphysical disputants in the Eleatic seat, employed much ingenuity and subtlety in exhibiting examples of most of the logical arts which were afterward reduced to rule by Aristotle and others. According to Aristotle, Zeno of Elea taught that nothing can be produced either from that which is similar or dissimilar; that there is only one being, and that is God; that this being is eternal, homogeneous, and spherical, neither finite nor infinite, neither quiescent nor moveable; that there are many worlds; that there is in nature no vacuum, &c. If Seneca's account of this philosopher deserves credit, he reached the highest point of scepticism, and denied the real existence of external objects. (*Seneca, Ep.*, 58.—*Enfield, Hist. Philos.*, vol. 1, p. 419, seq.)

ZENOPIA, a celebrated princess, wife of Odenatus, and after his death queen of Palmyra. (*Vid.* Odenatus, and Palmyra.) With equal talents for jurisprudence and finance, thoroughly skilled in the arts and duties of government, and adapting severity and clemency with nice discernment to the exigency of the circumstances, her agile and elastic frame enabled her to direct and share the labours and enterprises of war. Disdaining the female litter, she was continually on horseback, and could even keep pace on foot with the march of her soldiery. History has preserved some reminiscences of her personal appearance, her dress, and her habits, which represent this apparent amazon as a woman of the most engaging beauty, gifted with the versatile graces of a court, and accomplished in literary endowments. In complexion a brunette, her teeth were of a pearly whiteness, and her eyes black and sparkling; her mien was animated, and her voice clear and powerful. With a helmet on her head, and wearing a purple mantle fringed with gems and clasped with a buckle at the waist, so as to leave one of her arms bare to the shoulder, she presented herself at the council of war; and affecting, from the policy of her country, a regal pomp, she was worshipped with Persian prostration. Pure in her manners to the utmost refinement of delicacy, and temperate in her habits, she would nevertheless challenge in their cups her Persian and Armenian guests, and retire the victor without ebriety. Chiefly versed in the languages of Syria and Egypt, her modesty restrained her from conversing freely in Latin; but she had read the Roman history in Greek, was herself an elegant histori-

an, and had compiled the Annals of Alexandria and the East. Her authority was acknowledged by a large portion of Asia Minor when Aurelian succeeded to the empire. Envious of her power, and determined to dispossess her of some of the rich provinces comprehended in her dominions, he marched at the head of a powerful army to Asia. Having defeated the queen's general near Antioch, he compelled her to retreat to Emesa. Under the walls of this city another engagement was fought, in which the emperor was again victorious. The queen fled to Palmyra, determined to support a siege. Aurelian followed her, and, on making his approaches to the walls, found them mounted in every part with mural engines, which plied the besiegers with stones, darts, and missile fires. To the summons for a surrender of the city and kingdom, on the condition of her life being spared, Zenobia replied in a proud and spirited letter, written in Greek by her secretary, the celebrated Longinus. Her hopes of victory soon vanished; and, though she harassed the Romans night and day by continual sallies from her walls and the working of her military engines, she despaired of success when she heard that the armies which were marching to her relief from Armenia, Persia, and the East had either been intercepted or gained over by the foe. She fled from Palmyra in the night on her dromedaries, but was overtaken by the Roman horse while attempting to cross the Euphrates, and was brought into the presence of Aurelian, and tried before a tribunal at Emesa, Aurelian himself presiding. The soldiers were clamorous for her death; but she, in a manner unworthy of her former fame, saved her own life by throwing the blame on her counsellors, especially on Longinus, who was, in consequence, put to death. Zenobia was carried to Rome, to grace the emperor's triumph, and was led along in chains of gold. She is said to have almost sunk beneath the weight of jewels with which she was adorned on that occasion. She was treated with great humanity, and Aurelian gave her large possessions near Tibur, where she was permitted to pass the remainder of her days. Her two sons afterward married into distinguished families at Rome. (*Flav. Vopisc.*, *Vit. Aurel.*—*Treb. Pollio*, *Trigint. Tyrann.*—*Vit. Herennian.*)

ZENODORUS, a statuary, whose native country is uncertain. He exercised his art in Cisalpine Gaul, and also in Rome during the reign of Nero. Pliny speaks of a Mercury of his, and also of a colossal statue of Nero, afterward dedicated to the sun on the downfall of that emperor. (*Thiersch, Epoch.* 3, *Adnot.* 102.—*Silkg. Dict. Art.*, s. v.)

ZEPHYRUM, I. a promontory of Magna Græciæ, on the eastern coast of the lower extremity of Bruttium, whence the Locrians derived the appellation of Epizephyrii. It is now *Capo di Bruzzano*. (*Strabo*, 259.)—II. A promontory on the western coast of the island of Cyprus, and closing the Bay of *Befo* to the west. (*Strab.*, 683.)

ZEPHYRUS, one of the winds, son of Astræus and Aurora, the same as the *Fævonius* of the Latins. He had a son named Carpus (*Καρπός*, fruit) by one of the Seasons. (*Serv. ad Virg., Eclog.*, 5, 48.) Zephyrus is described by Homer as a strong-blowing wind; but he was afterward regarded as gentle and soft-breathing. In the days of Homer, the idea of darkness was also associated with the western regions of the world, and hence the wind Zephyrus derived its name from *ζῆφος*, "darkness," "gloom." In a succeeding age, when the west wind began to be regarded as genial in its influence both on man and all nature, the name was considered as synonymous with *ζωόποιος*, life-bearing. (*Hæsiad, Theog.*, 377.—*Virgil, Æn.*, 1, 135.—*Ovid, Met.*, 1, 64; 16, 700.—*Propertius*, 1, 16, 24, &c.)

ZETES, a son of Boreas, king of Thrace, and Orith-

ys, who accompanied the Argonauts to Colchis along with his brother Calais. In Bithynia, the two brothers, who are represented with wings, delivered Phineus from the persecution of the Harpies, and drove these monsters as far as the islands called Strophades. (Vid. Strophades, and Harpyia.—*Apolod.*, 1, 9; 3, 15.—*Hygin.*, fab., 14.—*Ovid.*, *Met.*, 8, 716.—*Pausan.*, 3, 16.)

ZETHUS, a son of Jupiter and Antiope, brother to Amphion. (Vid. Amphion.)

ZAGUS or ZEUGITANA, a district of Africa in which Carthage was situated. It extended from the river Tusca to the Hermian promontory, and from the coast to the mountains that separated it from Bysacium. (*Isid.*, *Hist.*, 14, 5.—*Plin.*, 5, 4.)

ZEUGMA, or the *Bridge*, the name of the principal passage of the river Euphrates, southwest of Edessa. An ancient fortress by which it was commanded is still called *Roum-Cala*, or the Roman Castle; to which may be added, that on the opposite shore there is a place called *Zeugma*. (*Plin.*, 5, 24.—*Curt.*, 3, 7.—*Tacit.*, *Ann.*, 12, 12.)

ZEUS, the name of Jupiter among the Greeks. (Vid. remarks under the article Jupiter.)

ZEUXIS, a celebrated painter, born at Heraclea, in Magna Græcia, and who flourished about B.C. 400. (*Plin.*, 35, 9, 36.—*Ælian.*, V. H., 4, 12.—*Hardouin.*, ad *Plin.*, l. c.—*Silbig.*, *Dict. Art.*, p. 130, not.) He studied under either Demophilus or Necessas, artists respecting whom nothing is known but that one of them was his master. Soon, however, he far outstripped his instructor, as Apollodorus intimated in verses expressive of his indignation that Zeuxis should have moulded to his own use all previous inventions, and stolen the graces of the best masters; thus paying a high though involuntary compliment to his gifted rival. Apollodorus having first practised chiaro-oscuro, could not endure that his glory should be eclipsed by a younger artist, who availed himself of his improvements to rise to a higher degree of excellence. Zeuxis seems to have rapidly risen to the highest distinction in Greece, and acquired by the exercise of his art, not only renown, but riches. Of the latter advantage he was more vain than became a man of exalted genius. He appeared at the Olympic games attired in a mantle on which his name was embroidered in letters of gold, a piece of most absurd display in one whose name was deeply impressed on the hearts and imaginations of those by whom he was surrounded. He does not, however, seem to have been chargeable with avarice; or, at least, this passion, if it existed, was subservient to his pride; for, when he had attained the height of his fame, he refused any longer to receive money for his pictures, but made presents of them, because he regarded them as above all pecuniary value. In the earlier part of his career he was accustomed, however, to exhibit his productions for money, especially his most celebrated painting of Helen. The truth seems to have been, that the ruling passion of Zeuxis was the love of pomp, an ever-restless vanity, a constant desire and craving after every kind of distinction.—Very little is known respecting the events of the life of this celebrated painter. He was not only successful in securing wealth and the applause of the multitude, but was honoured with the friendship of Archelaus, king of Macedon. For the palace of this monarch he executed numerous pictures. Cicero informs us, that the inhabitants of Crotona prevailed on Zeuxis to come to their city, and to paint there a number of pieces, which were intended to adorn the temple of Juno, for which he was to receive a large and stipulated sum. On his arrival, he informed them that he intended only to paint the picture of Helen, with which they were satisfied, because he was regarded as peculiarly excellent in the delineation of women. He accordingly desired to see the most

beautiful maidens in the city, and, having selected five of the fairest, copied all that was most beautiful and perfect in the form of each, and thus completed his Helen. Pliny, in his relation of the same circumstance, omits to give the particular subject of the painting, or the terms of the original contract, and states that the whole occurred, not among the people of Crotona, but those of Agrigentum, for whom, he says, the piece was executed, to fulfil a vow made by them to the goddess. This great artist, on several occasions, painted pictures for cities and states. He gave his Alcmena, representing Hercules strangling the serpents in his cradle, in the sight of his parents, to the Agrigentines, and a figure of Pan to his patron Archelaus of Macedon. The most celebrated of the pictures of Zeuxis, besides the Helen and the Alcmena, were, a Penelope, in which Pliny assures us that not only form, but character, was vividly expressed; a representation of Jupiter seated on his throne, with all the gods around doing him homage; a Marsyas bound to a tree, which was preserved at Rome; and a wrestler, beneath which was inscribed a verse, to the effect that it was easier to envy than to imitate its excellence. Lucian has left us an admirable description of another painting of his, representing the Centaur, in which he particularly applauds the delicacy of the drawing, the harmony of the colouring, the softness of the blending shades, and the excellence of the proportions. He left many draughts in a single colour on white. Pliny censures him for the too great size of the heads and joints, in comparison with the rest of the figures. Aristotle complains that he was a painter of forms rather than of manners, which seems contrary to the eulogium passed by Pliny on the representation of Penelope.—The story respecting the contest between Zeuxis and Parrhasius has been frequently related. It is said that the former painted a cluster of grapes with such perfect skill that the birds came and pecked at them. Elated with so unequivocal a testimony of his excellence, he called to his rival to draw back the curtain, which he supposed concealed his work, anticipating a certain triumph. Now, however, he found himself entrapped, for what he took for a curtain was only a painting of one by Parrhasius; upon which he ingeniously confessed himself defeated, since he had only deceived birds, but his antagonist had beguiled the senses of an experienced artist. Another story is related of a similar kind, in which he overcame himself, or, rather, one part of his work was shown to have excelled at the expense of the other. He painted a boy with a basket of grapes, to which the birds as before resorted; on which he acknowledged that the boy could not be well painted, since, had the similitude been in both cases equal, the birds would have been deterred from approaching. From these stories, if they may be credited, it would appear that Zeuxis excelled more in depicting form than in painting the human form. If this were the case, it is strange that all his greater efforts, of which any accounts have reached us, were portraits, or groups of men or deities. The readiness which Zeuxis has, in these instances, been represented as manifesting to acknowledge his weakness, is scarcely consistent with the usual tenour of his spirit. At all events, the victory of Parrhasius proved very little respecting the merit of the two artists. The man who could represent a curtain to perfection would not necessarily be the greatest painter in Greece. Even were exactness of imitation the sole excellence in the picture, regard must be had to the cast of the objects imitated, in reference to the skill of the artists by whom they were chosen.—Zeuxis is said to have taken a long time to finish his chief productions, observing, when reproached for his slowness, that he was painting for eternity.—Festus relates that Zeuxis died with laughter at the picture of an old woman which he himself had painted. So

extraordinary a circumstance, however, would surely have been alluded to by some other writer, had it been true. There seems good reason, therefore, to believe it fictitious. (*Encyclop. Metropol.*, div. 2, vol. 1, p. 405, *seqq.*)

ZOILUS, a sophist and grammarian of Amphipolis, who rendered himself known by his severe criticisms on the poems of Homer, for which he received the name of *Homeromastix*, or the chastiser of Homer, and also on the productions of Plato and other writers. *Ælian* (*V. H.*, 11, 10) draws a very unfavourable picture of both his character and personal appearance. In all this, however, there is very probably much of exaggeration. Dionysius of Halicarnassus (*Ep. ad Pomp.*) appears, on the other hand, to praise the man; he ranks him, at least, among those who have censured Plato, not from a feeling of envy or enmity, but a desire for the truth. The age of Zoilus is uncertain. *Vitruvius* (*Pref.*, ad lib. 7) refers him to the time of Ptolemy Philadelphus, and is followed by *Vossius*. *Reinesius*, however (*Var. Lect.*, 3, 2), and *Ionsius* (*de Script. Hist. Phil.*, c. 9) are opposed to this, because Zoilus is said to have been a hearer of Polycrates, who lived in the time of Socrates. (Consult the remarks of *Perizonius* on this subject, *ad Ælian.*, *V. H.*, l. c.) Some say that Zoilus was stoned to death, or exposed on a cross, by order of Ptolemy, while others maintain that he was burned alive at Smyrna. According to another account, he recited his invectives against Homer at the Olympic games, and was thrown from a rock for his offence. (*Ælian*, *V. H.*, l. c.—*Longin.*, 9, 4.)

ZONA or ZONE, a city on the *Ægean* coast of Thrace, near the promontory of Serrium. It is mentioned by *Herodotus* (7, 59) and by *Hecataeus* (*ap. Steph. Byz.*). Here *Orpheus* sang, and by his strains drew after him both the woods and the beasts that tenanted them. (*Apollon. Rhod.*, 1, 28.)

ZONARAS, a Byzantine historian, who flourished towards the close of the eleventh and the commencement of the twelfth centuries. He held the offices originally of Grand *Dungarius* (commander of the fleet) and chief secretary of the imperial cabinet; but he afterward became a monk, and attached himself to a religious house on Mount *Athos*, where he died subsequently to A.D. 1118. His *Annals*, or *Chronicle*, extend from the creation of the world down to 1118 A.D., the period of the death of *Alexis I.* They possess a double interest: for more ancient times, he has availed himself, independently of *Eutropius* and *Dio Cassius*, of other authors that are lost to us; and at a later period he details events of which he himself was a witness. Though deficient in critical spirit, he has still displayed great good sense in adding nothing of his own to the extracts which he has inserted in his history, except what might serve to unite them together in regular order. There results from this, it is true, a great variety of style in his work, but this is easily pardoned, and the only regret is, that *Zonaras* had not indicated with more exactness the authors whence he drew his materials. The impartiality of the writer is worthy of praise. This work is found in the collections of the Byzantine Historians.—*Zonaras* was the author also of a *Glossary* or *Lexicon*, in the manner of *Heyschius* and *Suidas*. It was published

by *Tittman*, in 1806, at the *Leipzig* press, along with the *Lexicon* of *Photius*, in 3 vols. 4to, the first two volumes being devoted to the *Lexicon* of *Zonaras*. (*Schöll, Hist. Lit. Gr.*, vol. 6, p. 238.)

ZORËRUS, a Persian, son of *Megabyzus*, who gained possession of *Babylon* for *Darius Hystaspis* by a stratagem similar to that by which *Sextus Tarquinius* gained *Gabii* for his father. (*Vid. Tarquinius III.—Herod.*, 3, 154, *seqq.*)

ZOROASTER, a celebrated reformer of the *Magian* religion, whose era is altogether uncertain. In what points his doctrines may have differed from those of the preceding period is an obscure and difficult question. It seems certain, however, that the code of sacred laws which he introduced, founded, or at least enlarged, the authority and influence of the *Magian* caste. Its members became the keepers and expounders of the holy books, the teachers and counsellors of the king, the oracles from whom he learned the *Divine will* and the secrets of futurity, the mediators who obtained for him the favour of *Heaven*, or propitiated its anger. According to *Hyde*, *Prideaux*, and many others of the learned, *Zoroaster* was the same with the *Zerdusht* of the *Persians*, who was a great patriarch of the *Magi*, and lived between the beginning of the reign of *Cyrus* and the latter end of that of *Darius Hystaspis*. This, however, seems too late a date.—The so-called "*Oracles of Zoroaster*" have been frequently published. (Consult, on this whole subject, the very learned and able remarks of *Parisot, Biogr. Univ.*, vol. 52, p. 434, *seqq.*, and also *Rhode, die heilige Sage, &c., der Baktrer, Meder, &c.*, p. 112, *seqq.*)

ZOSIMUS, I. a Greek historian, who appears to have flourished between A.D. 430 and 591. He was a public functionary at *Constantinople*. *Zosimus* wrote a history of the *Roman emperors* from the age of *Augustus* down to his own time. His object in writing this was to trace the causes which led to the downfall of the *Roman empire*, and among these he ranks the introduction of *Christianity*. There are many reasons which induce the belief that the work of *Zosimus* was not published in his lifetime, one of the strongest of which is the boldness with which he speaks of the *Christian emperors*. It is probable that he intended to continue the work to his own times, a design which his death prevented. A certain negligence of style, which indicates the absence of a revision on the part of the author, strongly countenances this supposition. The best editions of *Zosimus* have been that of *Celarius*, 8vo, *Jena*, 1728, and that of *Reitemier*, 8vo, *Lips.*, 1784. The best edition now, however, is that by *Bekker* in the *Corpus Byz. Hist.*, *Bonn*, 1837, 8vo.—II. A native of *Panopolis*, in *Egypt*, who wrote, according to *Suidas*, a work on *Chemistry* (*Χημεινικά*), in 28 books. The *Paris* and *Vienna MSS.* contain various detached treatises of this writer, which formed part, in all likelihood, of this voluminous production; such as a dissertation on the sacred and divine art of forming gold and silver, &c. There exist also five other works of this same writer, such as "*On the Art of making Beer*" (*περί ζύθου ποιήσεως*), &c. An edition of this last-mentioned work was published in 1814, by *Grüner, Solisbac.*, 8vo. (*Hoffman, Lex. Biblogr.*, vol. 3, p. 830.—*Schöll, Hist. Lit. Gr.*, vol. 7, p. 210.)

AN
E S S A Y
ON THE
MEASURES, WEIGHTS, AND MONEYS
OF THE
GREEKS AND ROMANS.

8Q

THE MEASURES, WEIGHTS, AND MONEYS OF THE GREEKS AND ROMANS.

THE metrological systems of the Greeks and Romans, and the methods pursued in the determination of their standards, have been regarded with interest by those curious in antiquarian researches. While the relations of the various parts of each system have been satisfactorily ascertained, the values which have been assigned to their units, whether of length, capacity, or weight, when referred to those of modern times, exhibit considerable discrepancy. This may not excite surprise when it is considered that these values have been deduced from observations, made with different degrees of nicety, upon models possessing conflicting claims to perfection. A learned professor of Stuttgart* has reviewed the labours of his predecessors in these inquiries with masterly skill, and has imparted to his investigations a precision which entitles them to reliance. His results have been adopted, and his mode of procedure exhibited in the following pages. In conformity with his plan, and for the reason that we possess more numerous specimens of the Roman standards than of those of the Greeks, which furnish more accurate data for the estimate of both, the former will be first treated of.

§ 1. ROMAN MEASURES OF LENGTH.

The Romans, like other nations of antiquity, derived their measures of length from the different members of the human body, the unit of which was the foot. Their *Pes* was divided both into 12 *uncia* and 16 *digiti*. The first division, by which it was recognised as the $\frac{1}{12}$ th or unit, and its parts expressed by *uncia*, was generally adopted. Thus, when authors make mention of *pes uncialis*, they understand the $\frac{1}{12}$ th of *pes*; thus, also, *pes dodrantalis* means $\frac{3}{4}$, *bessalis* $\frac{2}{3}$, *quincunqalis* $\frac{1}{2}$, *trientalis* $\frac{1}{3}$, *quadrantal* $\frac{1}{4}$, and *seminuncialis* $\frac{1}{8}$ th of *pes*. The second division, into 16 *digiti*, is the more natural, and was principally used by architects and land surveyors; and, though it latterly came into more general use, is seldom found in the specimens of the *pes*, unaccompanied by the first. *Palmus*, the palm, or the width of the hand, is the $\pi\alpha\lambda\mu\sigma\tau\eta$ of the Greeks, and was invariably received by the Romans as the fourth of *pes*; but St. Jerome, in his comments on Ezechiel (*cap.* 40), has assumed it as the three fourths, by which admeasurement it nearly answers to the Greek $\sigma\tau\eta\theta\alpha\pi\eta$, and the modern Italian Palm. *Cubitus* is *sesquipies* or $1\frac{1}{2}$ *pedes*, and is seldom met with except when it is used in translating

the Greek $\pi\eta\chi\upsilon\varsigma$. It is sometimes improperly confounded with *Ulna*. *Ulna* is the Greek $\delta\upsilon\gamma\upsilon\alpha$ ("dicta ulna $\kappa\alpha\tau\grave{\alpha}$ τῶν ὀλῶνων, id est a brachiis; proprie est spatium in quantum utraque extenditur manus."—*Servius ad Virg., Ecl.*, 3, 106.) *Pes sestertius* = $2\frac{1}{2}$ *ped.* is rendered by Boëthius and Frontinus *gradus* or "step," a term, however, not found in any classical writer. *Passus* ("a passis pedibus") was a pace, equal to five *pedes*. *Decempeda* or *Pertica* (modern Perch) was employed in measuring roads, buildings, land, &c. *Actus* is the length of a furrow, or the distance a plough is sped before it turns, and corresponds to our Furlong: it equalled 120 *ped.* The Itinerary unit, by which the Romans assigned the length of their own roads, was *milliare* (*mille passuum*) = 6000 *ped.*; that by which they expressed the valuation of maritime distance, or that between places situated in Greece, was the *stadium* = 125 *passus* = 725 *ped.*; and that employed in measuring the roads of the Gauls was the *leuca* or *leuga* (whence our League is derived, though more than double in value) = $1\frac{1}{2}$ *milliaria*.

§ 2. ROMAN MEASURES OF EXTENT.

The unit of extent was *Jugerum* (nearly $\frac{1}{4}$ of our acre), which was also distributed into *uncia*: *Columella* describes it as being 240 *pedes* in length and 120 in breadth = 28,800 *pedes quadrati*; and, consequently, *uncia* = 2400, *Sicilicus* = 600, *Sextula* = 400, and *Scrupulum* = 100 *ped. quad.*; which last is evidently a *decempeda quadrata*. These were used by surveyors; but those more commonly mentioned by writers on husbandry were *Clima*, *Actus*, *Jugerum*, *Heredium*, *Centuria*, and *Saltus*. *Clima* is a square whose side is 60 *ped.* (*Columella*, 5, 1.) *Actus quadratus* ("in quo boves agerentur cum aratro, cum impetu justo."—*Plin.*, 18, 3) is thus explained by *Columella*: "*Actus quadratus undique finitur pedibus 120, et hoc duplicatum facit jugerum, et ab eo, quod erat junctum, nomen jugeri usurpavit.*" (*Colum.*, 1. c.) *Actus minimus* or *simplex* was 120 *ped.* in length and four in breadth. *Varro* (*R. R.*, 1, 10) thus describes the *Heredium*, *Centuria*, and *Saltus*: "*Bina Jugera, quæ a Romulo primum divisa dicebantur viritum, quod heredem sequerentur, heredium appellarunt. Heredia centum centuria dicta. Hæ porro quatuor centuria conjuncta, ut sint in utramque partem bina, appellatur in agris viritum divinis publicis saltus.*" *Versus* = 10,000 *ped. quad.* answers to the Greek $\pi\lambda\epsilon\upsilon\sigma\tau\eta$.

§ 3. ROMAN MEASURES OF CAPACITY.

1. For liquids. The standard measure of capacity was the *Quadrantal* or *Amphora* (derived from the Greek $\alpha\mu\phi\omicron\rho\epsilon\acute{\rho}\epsilon\varsigma$), being a cubic vessel each of whose sides was a Roman foot; and, according to an old decree of the people preserved by *Festus*, it contained 80 *libra* (Roman pounds) of wine. *Columella* fre-

* J. F. Wurm. His determinations are given in the old French measures, weights, &c., and have been reduced to the English and American standards by a comparison of the "Manual des Poids et Mesures" of M. Tarbé, and Mr. Haessler's able report to the Treasury Department in 1833. Other works have been consulted, of which may be mentioned those of *Groenew.*, *Hooper*, and *Arbuthnot*; the papers of *Raper* in the *Philosophical Transactions* of the Royal Society of London for the years 1780 and 1771, and the profound report of *President Adams* to the Senate of the United States in 1821.

† See the section on Roman Weights.

quently makes *cadus* synonymous with it, and by the Greeks it was called *κεράμιον*, *ἀμφορεύς*, and *μετρητής* *Τραλίκός*. The greatest liquid measure was the *Culeus* or *Culleus*=20 *amphora*. The divisions of the *amphora* are easily inferred from the plebiscitum just mentioned, and from the following passage of Volusius Mæcianus: "*Quadrantal, quod, nunc plerique amphoram vocant, habet urnas 2, modios 3, semimodios 6, congius 8, sextarius 48, heminas 96, quartarios 192, cyathos 576.*" The *Urna* was so called, according to Varro, "*ab urinando, quod in aquâ hauriendâ, urinatur, hoc est mergitur, ut urinator.*" *Congius* was the cube of half a *pes*; one of Vespasian's is still extant, marked with the letters P. X., which denote *pondo decem*, ten being the number of pounds it contained by law. *Congii* of wine or oil were given to the people by the emperors and chief magistrates on holidays, which gifts were hence called *congiarii*, and persons frequently derived surnames from the number of *congi* of wine they were in the habit of drinking at a draught; hence Cicero's son was called *Bicongius*, and Novellus Torquatus, a Milanese, *Tricongius*. (*Plin.*, 14, 23.)

Sextarius was $\frac{1}{2}$ of the *congius*=2 *hemina*=4 *quartarii*=12 *cyathi*; hence the *sextarius*, from the fact of its containing 12 *cyathi*, was regarded as the *as* or unit of liquid measures, and its *uncia* or *cyathi* were denominated, according to their numbers, *sextans*, *quadrans*, &c. It may be remarked that the ancients, at their entertainments, were in the habit of drinking as many *cyathi* as there were letters in the names of their mistresses. (*Martial, Epig.*, 9, 93; 1, 72.) There were two kinds of *sextarii*, the *castrensis* and *urbicus*, the former being double of the latter, or common *sextarius*. *Acetabulum* was half the *quartarius*, and was so called, in imitation of the Greeks (to whose *διστάβρον* it corresponded), from *acetum*, since it was first used for holding sauce for meat. *Lagula* or *lingula* at first simply signified a spoon, but was afterward regarded by the Latin physicians as a fourth of the *cyathus*; Pliny and Columella make *cochlear* or *cochleare* synonymous with it.

2. For things dry. The unit of this measure was the *modius*, which contained two *semimodii*, and was $\frac{1}{2}$ of the *amphora*, as is apparent from the passage of Volusius Mæcianus above quoted. The remaining measures, *sextarius*, *hemina*, &c., bear the same relation to the *amphora* in the dry as in the liquid measure.

§ 4. DETERMINATION OF THE ROMAN MEASURES.

The measures of Length, Extent, and Capacity are so intimately connected that the determination of their values will easily be deduced from that of the *pes*. Various measurements have been made, and various modes of investigation been pursued, for the purpose of assigning the value of the Roman foot, which, from the imperfection of instruments, the want of accuracy of observation, and of attention paid to the degree of injury which the specimens examined may have suffered, differ considerably in their results. We shall give a brief account of most of these observations, and, as far as possible, assign to each its proper degree of credence. All that has served as a means of calculating the value of the Roman foot may be arranged under the following classes: (a) Specimens of the *pes* found on tombstones. (b) Foot-rules. (c) Milestones. (d) Distances of places. (e) *Congii*. (f) Dimensions of ancient buildings at Rome.

(a) There remain four celebrated specimens of the Roman foot represented on tombstones, which have been respectively named the Stilian, Cossutian, Æbutian, and Capponian feet. 1. The Stilian foot was discovered in the 16th century in the Vatican Gardens at Rome, on the tombstone of a certain Stilius; though in a state of good preservation, it is of clumsy workmanship, and carelessly subdivided. Greaves

found it .972 feet, which measurement, however accurately it may have been determined, can now be of little use, inasmuch as the present standard foot is greater than that employed by him, by an excess not easily ascertained, though it has been estimated by Raper at $\frac{1}{100}$, which, applied as a correction, would give the Stilian foot .970056 ft. Auzout, according to Raper, found it .96996 ft., and Ravillas .96979 ft. The mean value of the Stilian foot deduced from these observations is then 11.639224 inch.—2. The Cossutian foot was found on the tombstone of Cn. Cossutius (probably the same with a celebrated architect mentioned by Vitruvius), and dug up about the same time with the Stilian, in the gardens of Angelo Colozzi, from whom it has taken the name of Coloutan; the divisions are scarcely perceptible; Greaves found it .967 ft., which, corrected, is .965066 ft.—3. The Æbutian foot was discovered on the monument of M. Æbutius, in the Villa Mattæi; it is but rudely divided into palmi, and its mean length is 11.6483 mch.—4. The Capponian foot was found on a marble without inscription in the Via Aurelia, and presented by the Marquis Capponi to the Capitoline Museum, where it is preserved with the three others. Revillas found it 11.625 inch. The value of the *pes*, if considered as the mean of these four feet, is 11.623326 inch.

(b) From the foot-rules we might expect to derive a result more worthy of reliance, since they were constructed for the direct purpose of measurement, those on the marble being probably intended to explain the profession of the individuals to whose memory they were erected. The foot-rules were bars of iron or brass, of the length of a *pes*. Those most celebrated are the three discovered by Postus, equal in length, of which a model, cut in marble, was placed by him in the Capitol, whence the foot has been styled the Capitoline, and has been generally considered as the true Roman foot. From the numerous measurements it has undergone, it has sensibly increased, so that its value must be assumed=128.695 Par. lin., its original determination by Postus, reduced to the French standard by Wurm. Now the Paris line being (according to the mean value of the toises of Canivet and Lenoir, as given by Mr. Hassler) equal to .007401829 English feet, the Capitoline foot equalled .95258 feet. Besides the Pælian, other foot-rules remain, not, however, celebrated; their values are mostly between .967 and .97 ft.

(c) The distances between the milestones might furnish a correct determination of the Roman foot, were it not that none are now standing within 30 miles of Rome, and, therefore, none to be much relied on as having been originally measured off with accuracy. Bianchinus, however, a celebrated Italian philosopher and mathematician of the 17th century, from the distances of the milestones on the Appian road, deduced the Roman foot=130.6 Par. lin.=11.60015 inch.

(d) The measures of the public roads recorded in the Itinerary of Antoninus and in the Peutinger Table, can be of little assistance in our inquiry, since those records not only omit fractions, which must have existed, but are frequently at variance with each other. Besides, it is not known whether the distances are reckoned from the market-places or from the gates; and an error of half a mile in sixty, being equivalent to an error of the tenth part of an inch in a foot, no exact value of the Roman foot could be hence derived, even though the mensurations of Cassini, Riccioli, and others were totally unexceptionable.

(e) In the description of the measures of capacity, it was stated that the *congius*, in accordance with a plebiscitum (the Silian law), contained ten Roman pounds of wine or water. By the determination of the *libra*, which is given in section v., the *congius* weighed 50495.8064 grs.; now as a cubic inch of distilled water, at maximum density, weighs 252.632

grs., the congius contains 199.876921 cubic inches, and, consequently, its side is 5.8468 inch. But the side of the congius was half the Roman foot; hence the value of the Roman foot, as deduced from the congius, is 11.6936 inch. Though this result is very near the correct one, much reliance cannot be placed on this mode of arriving at it, in consequence of the weight of the ancient wine (80 librs of which were contained in the congius) being unknown. But, as Rhemnius Fannius informs us that the ancients accounted no difference to exist in the specific gravities of wine and water, we have considered them equal, and supposed distilled water of maximum density to be of the same specific gravity with that employed by them, which was very probably pure rain-water. There remain two congii, of which the most celebrated was placed by Vespasian in the Capitol, as its inscription imports, and is commonly called the Farnesian; the other is preserved at Paris. These have been filled with water and weighed by Pætus, Villalpandus, Auzout, and others, who have hence sought to determine the libra and pes; but the results of their experiments are so much at variance as to render any inferences drawn from them objectionable.

(f) The last method we shall notice, and which leads to the most satisfactory conclusion, consists in the measurement of the ancient buildings now standing at Rome; and though many have ascertained the length of some single parts of them, yet no one has compared the measures of the principal parts with so much assiduity and success as Mr. Raper. Having carefully examined the work entitled "*Les Edifices antiques de Rome*," by M. Desgodetz, he very ingeniously deduced the value of the Roman foot from 65 dimensions=97075 ft. From this value of the pes, which is the one now generally adopted in Germany and France, are easily deduced all the measures of length. (See Tables I. and II.) The jugerum being 28800 *ped. quad.*, equals 27139 sq. ft.=2 roods, 19 poles, and 187 ft.; whence the superficial measures in Tables III., IV., and V. have been calculated. The amphora being the cube of the pes, equals 1590.75 cub. inch.; but as a cubic inch of distilled water at maximum density weighs 252.632 grs., and a gallon 10 lbs. avoirdupois or 70,000 grs., the amphora equals 5 galls., 2 qts., 1.64 pts.; whence the Capacious measures in Tables VI. and VII. have been computed.

§ 5. ROMAN WEIGHTS.

The unit of weight was originally denominated *As*, and subsequently *Libra* or *As Libralis*. It corresponded nearly with our Troy pound. Its multiples were *Dupondius* (2 pondo or librs), *Sestertius* (2½ asses), *Tyressis* (3 asses), *Quadrussis*, *Quinquessis*, and so on till *Centussis*. The term *as*, though properly applied to a piece of copper of the weight of a Roman pound, was extended not only to all the Roman measures expressing their units, but also denoted the entire amount of inheritances, interest, houses, farms, and all things which it was customary to divide; and reference being constantly made by authors to it and its subdivisions, it is important that they should be thoroughly understood. The following table exhibits the relations subsisting between the *as* and its several parts.

	Uncia	As		Uncia	As		Uncia
As	12	1	Semis	6	1	Semiuncia	1
Decunx	11	1/12	Quincunx	5	1/12	Duella	1/12
Dextans	10	1/10	Triens	4	1/10	Siciliens	1/10
Dodrans	9	1/9	Quadrans	3	1/9	Sextula	1/9
Bes	8	1/8	Sextans	2	1/8	Scrupulum	1/8
Septunx	7	1/7	Sescunx	1 1/2	1/7	Obolus	1/7
			Uncia	1	1/12	Siliqua	1/12

The Romans made their weights of marble, iron, or brass. A few specimens of these are now extant, and have been weighed by Rome de l'Isle and Eisenschmid, whose results vary from 4900 to 5100 grs. Others have attempted the determination of the libra from the relation existing between it and the congius, the latter having been determined to contain 197.6 cub. inch. nearly. If we assume the weight of a cubic inch of water=253 grs., a congius of water would weigh 49992 grs., and the libra would equal 4999.2 grs.; but if we suppose a cubic inch of the Roman wine, which was employed in the adjustment of the libra and congius with regard to one another, to weigh 256 grs., the value of the libra would be 5058.5 grs. It is then evident that, from our ignorance of the specific gravity of the ancient wine, we can arrive at no more accurate conclusion with regard to the value of the libra from a knowledge of the exact dimensions of the congius, than from the weight of those rough specimens just noticed. This assertion may be substantiated by mentioning the valuations given by different metrologists, who have employed either the congius or the specimens as the basis of their calculations. Budæus makes the libra=5904 grs., Rome de l'Isle 4958, Auzout 5105, Eisenschmid 5097, Paucton 5175, and Arbuthnot 5245½ grs. The mode of investigation founded on the hypothesis that the ancients exercised at least a tolerable degree of nicety in standarding their moneys, has been justly recommended as the most perfect we can employ. It consists in ascertaining the value of the scrupulum, and hence that of the libra, from certain aurei which are extant, and which were coined of the weight of a certain number of scrupula, indicated by the stamp they bear. Letronne, whose accurate and laborious experiments on the ancient coins have entitled him to implicit reliance, from the weight of 54 aurei deduced the scrupulum=21.4 Par. grs.; hence 388 scrupula or the libra=6163.2 Par. grs. We may safely put the Roman pound, as Letronne advises, =6160 Par. grs., since an error of the hundredth part of a grain in the value of the scrupulum just assigned would produce one of 2.88 grs. in that of the libra. The libra then equals 6160 Par. grs.=5049.53 mint-pound grs.,* and the remaining weights are hence easily calculated. (See Tables VIII. and IX.)

§ 6. ROMAN MONEYS.

Festus informs us that the Romans during the reign of Romulus had not established coined money as a medium of exchange, but used for this purpose leather, painted wood, and pieces of metal, the values of which were determined by weight. That Numa caused copper to be cut into rough pieces (*ara rudia*) of the weight of a libra, is asserted by some authors, while others are of opinion that leather, &c., were still used in the time of Numa, and that Servius Tullius first ordered round pieces of copper to be made, of a pound weight, called *asses librales*, with the images of cattle (*pecudes*) rudely sketched on them, and that hence the term *pecunia* was applied to money. Copper continued to be in general circulation till A.U.C. 485, when silver was first coined at Rome, though foreign coins of this metal had been previously introduced; the coinage of gold followed 62 years after. The temple of Juno Moneta was appropriated as the general depository of standards, and the coins were issued from it, having been previously inspected by *Nummularii* or

* The Paris grain equals .819739 mint-pound grs., or .820078 Troughton's grs.; since the French Kilogram equals 16827.15 Par. grs., 15433.159 mint-pound grs., or 15439.619 Troughton's grs. It may be here remarked, that we have employed the mint-pound grs. of Philadelphia, of which the mint-pound contains 7000, in assigning the values of the Greek and Roman weights, and those who wish to obtain them in Troughton's grs. can effect their object by multiplying these we have given by 1.0004184. (See Mr. Hassler's Report.)

assaymasters. The entire mint was under the general superintendence of three men, appointed by the people at the Comitia Tributa, denominated *Triumviri Monetales*. The Romans counted by *asses*, *sestertii*, *denarii*, and *aurei*. The *as* (originally *assis*, from *aes*), or *aspondium*, was at first libralis, and bore the impression of Janus geminus, or bifrons, on one side; on the reverse, the rostrum of a ship, and was at first, as we have noticed, libralis; but in the first Punic war, in consequence of the scarcity of money, the republic ordered *asses* to be struck weighing 2 uncies, by which, as Pliny informs us, it gained $\frac{2}{3}$ and discharged its debt; it was subsequently reduced, when Hannibal invaded Italy, to the weight of an uncia, and lastly by the Papirian law to that of a semiuncia; and though this rapid diminution of its weight was required by the necessities of the commonwealth, it would eventually have been accomplished by the increasing abundance of silver and gold. The *as* thus reduced was, in reference to its original weight, denominated *libella*, and the older coins are distinguished from it by later writers when they speak of *as grave*. Besides the *as*, its subdivisions, viz., *semisses*, *trientes*, *quadrantes*, *sextantes*, *stipes unciales*, *semiuncia*, and *sextula* (the smallest of the Roman coins according to Varro), and its multiples, *dupondii*, *quatuorasses*, and *decusses*, were coined; specimens of which remain at the present day, and are to be found in the most valuable collections of ancient coins. But those pieces less than the *as* which were most frequently coined, were the *semissis* and *quadrans*, bearing the impress of a boat instead of the rostrum of a ship; the former was also named *semitruncus* (*quasi semilibella*), the latter *teruncius*. The *sestertius*, *quinarius*, and *denarius* were silver coins, and called *bigati* or *quadrigati*, from the impression of a chariot drawn by two or four horses, which they bore on one side, that on the reverse being the head of Roma with a helmet. The *sestertius* (or *semitertius*) was so called by a figure borrowed from the Greeks, and equalled 2½ *asses*; its symbol is H. S., abbreviated from L. L. S., the initials of *libra*, *libra*, *semis*. The *sestertium*, or 1000 *sestertii*, was expressed by the symbol HS; it was not a coin, but was employed by the Romans, together with the *sestertius*, in computing large sums of money. Their method of notation was effected by combining the symbols with their numeral characters; thus HS. MC. indicates 1100 *sestertii*; but if the numerals have a line over them, *centena milia* or 100,000 is understood; thus HS. $\overline{\text{MC}}$. means 110 millions of *sestertii*. When the numerals are separated by points into two or three orders, the 1st on the right hand denotes units, the 2d, thousands, the 3d, hundred thousands; thus, III. XII. DC. HS. denotes 300,000 + 12,000 + 600 = 312,600 *sestertii*. The following illustration may be also added. Pliny says, that seven years before the first Punic war there were in the Roman Treasury "*auri pondo XVI. DCCCX.; argenti pondo XXII. LXX.; et in numerato LXII. LXXV. CCCC.*" (33, 3); that is, 16,810 pounds of gold, 22,070 pounds of silver, and 6,275,400 *sestertii* of ready money. The *quinarius* was equal to 5 *asses*, and marked V; by the Clodian law it was impressed with the figure of Victory, and hence called *Victorialis*. The *denarius*, at its first institution, equalled 10 *asses*, and was stamped with the numeral X or $\frac{10}{A}$. But when the Romans were pressed by Hannibal, A.U.C. 537, the *as* having been made *uncialis*, the *denarius* passed for 16 *asses*, the *quinarius* for 8, and the *sestertius* for 4; and when the *as* was made *semitruncialis* the same proportion was retained, except in the payment of the soldiers, with whom the *denarius* preserved its original value. The *denarius* was not used as a weight until the Greek physicians came to Rome, who, finding it nearly equal to their

drachm, prescribed by it; it was then considered, as we are informed by Corn. Celsus, as the $\frac{1}{4}$ of an uncia. But it gradually diminished in weight under the Cæsars (see Table XII.); and having subsequently regained its original weight, though with a considerable abatement of its purity, it continued to be the current silver money of the empire till Constantine substituted the *miliarensis* in its stead. Letronne having carefully weighed 1350 consular *denarii*, deduced the weight of the *denarius* = 73 Par. gra. = 59.84 mint-pound gra. Now its purity being .97, its value is easily calculated = 8d. 2.17 far. = 15 cts., 4.7 mills. (See Tables X. and XI.)

The golden coins of *Aurei* were issued A.U.C. 546, weighing 1 or more *scrupula*, the *scrupulum* of gold passing for 20 *sestertii*. Some few remain with the numerals XX. and XXXX., which indicate their values to be respectively 20 and 40 *sesterties*. They have the head of Mars and the numerals denoting their value on one side, and on the reverse an eagle standing on a thunderbolt. Afterward it was thought proper to coin 40 *aurei* out of the pound, each valued at 25 *denarii*; their mean weight is 125.62 gra. The *aureus* gradually diminished in weight during the time of the emperors (see Tab. XII.), till in Pliny's time 45 were struck out of the pound. The Emperor Severus coined *semisses* and *trimeses* of gold, whence the *aureus*, being considered the integer, was denominated *Solidus*. Soon after, the coinage, becoming irregular, was entirely remodelled by Constantine, who coined 72 *solidi* out of the pound, each weighing then 4 *scrupula* or 70.13 gra., and made the pound of gold equal to 1000 *miliarenses*; so that the *solidus* equalled 13½ *miliarenses*, though it passed for 14.

The ratio of gold to silver during the republic and the twelve Cæsars is given in Tab. XII.

The Grecian measures, weights, and coins, being well known to the Romans, were mostly determined by them to have some definite relation to their own; so that they will oppose less difficulties in assigning their values.

§ 7. GRECIAN MEASURES OF LENGTH.

The unit of linear measure adopted by the Greeks was the foot (Πούς), of which the δάκτυλος, or finger's breadth, was $\frac{1}{4}$, and the παλαιστή, or palm, $\frac{1}{2}$. The latter was also understood by δόχη, from δέχομαι, "to receive," by the compound term δακτυλοδόχη, and by δῶρον, which properly signifies a gift; the application of the latter term to this measure is commonly explained by the fact, that the palm of the hand is naturally extended in receiving a gift. Σπιθαμή, or span, equals 12 δάκτυλοι, and is defined by Hesychius to be the distance from the extremity of the thumb to that of the little finger, when the hand is opened with a view of grasping or measuring any object. The divisions of the πούς, more rarely employed, are κόνδυλος, διχάς, λυχάς, and ὀρθόδωρον; the first being 2 δάκτυλοι, and the second $\frac{1}{2}$ πούς, hence entitled by Theophrastus ἡμιπόδιον. The λυχάς was 10 δάκτυλοι, and the ὀρθόδωρον, being the length of the hand from the wrist to the extremity of the middle finger, equalled 11 δάκτυλοι. Pollux (lib. 2), from whom the previous definitions have been derived, informs us that πγμή = 18 δάκτυλοι, was the distance from the elbow to the extremity of the metacarpal bone of the middle finger, while that reckoned to the extremity of its first phalanx was πγών = 20 δάκτυλοι, and that πήχυς = 24 δάκτυλοι, was the cubit, or the distance from the elbow to the extremity of the middle finger. The πήχυς then contained 1½ πόδες. The βῆμα was 2½ πόδες, and thus corresponded to the pes *sestertius* of the Romans. It was employed by the people at large as the unit of distance, whence βηματισταί mean measurers of

roads. "Ὀργυία, or fathom, from *ὀρέγω*, "to extend," is the distance from the hands, when the arms are raised and extended, measured along the breast, and equals 6 πόδες; hence it has received from Herodotus the epithets *τετράπηγος* and *εξαπόδος*. The measure from which the Romans probably borrowed their decempeda was *ἄκαινα* or *κάλαμος*=10 πόδες; six of these constituted the ἄμμα, which, together with the *πλέθρον*=100 πόδες, and the *κάλαμος*, was used principally in the measurement of lands. The most ancient itinerary measure of the Greeks was the στάδιον, which appears to have had a very rude origin. It is said to have been the invention of Hercules, whose athletic exertion it exhibited, since it comprehended the distance which he was able to run without taking breath. Isidorus informs us that it took its name from *ἵστημι*, "to stand," and assigns as a reason, "*quod in fine respirasset simulque stetisset*." It was established as the measure of the length of the αὐλός, or foot-course, at the Olympic games; and from the respect in which these exercises were held, it became an itinerary measure. This distance, the hero who instituted it measured by the length of his foot, which he found equal to one six hundredth part of the course. Censorinus and M. Gossellin have endeavoured to show that there were different stadia employed among the Greeks, but their remarks have been completely refuted by Wurm. Ἰππικόν, or the distance a horse could run, "*sub uno spiritu*," equals 4 στάδια, and Δόλιχος has been variously assumed as 6, 7, 8, and even 24 στάδια, but more correctly as 12. Those linear measures which were known to the Greeks by their intercourse with other nations, were Μίλιον, or the Roman mile=8 στάδια; Παρασάγγη=30 στάδια, according to Herodotus (2, 6) and Xenophon (*Anab.*, 5, 7), though Strabo makes it, in different places, 40 and 60 στάδια; and Σχοῖνος, an Egyptian measure, whose value is differently assigned to be 60, 40, and 32 στάδια.

§ 8. DETERMINATION OF THE GREEK FOOT.

There are two methods of investigating the value of the πούς proposed to us: the first consists in its determination by its ratio to the Roman foot; the second, by means of the public edifices of the Greeks which are yet standing.

1. All authors agree that the ratio subsisting between the Roman and Greek foot is 24 : 25, as might also be inferred from the value the Greeks assigned to μίλιον, which we have mentioned was 8 στάδια=4800 πόδες=6000 *pedes*. Now the Roman foot having been determined=97075 ft., the value of the Greek foot hence deduced is 1.0111812 ft.

2. Mr. Stuart, who examined the temples remaining at Athens, found the average ratio of the Greek to the Roman foot to be 25.04 : 24. (*Quarterly Review*, No. 10, p. 280.) The Greek foot would hence =1.0128168 ft.

The mean of these two values is 1.011999 ft. We prefer, however, adopting Wurm's determination, who has examined Mr. Stuart's measurements with great accuracy, and has equalled the Greek foot to 136.65 Par. lin.=1.01146 ft. (See Tab. XIII. and XIV.)

§ 9. GRECIAN MEASURES OF EXTENT.

The unit of extent was Ἀπουρά, being a square whose side is 50 πόδες; it was divided into sixths and twelfths, respectively called *ἑκτοί* and *ἡμικτοί*. The πλέθρον contained 4 ἀπουράι, and is the measure most frequently mentioned in the superficial measurements of lands. The values and relations of the others are exhibited in Table XV.

§ 10. GRECIAN MEASURES OF CAPACITY.

1. *For Liquids*.—The greatest liquid measure was Μετρητής, which was also called *κάδος*, from *χαδεῖν*, "to contain;" *κεράμιον*, probably from its being made

of horn; and ἀμφορεύς, from ἀμφιφορεύς, receiving its name from the two handles by which it was carried. Another synonyme was *σταμνίον* ("κεράμιον τοῦ οἴνου ἢ ὕδατος σταμνίον," Hesychius.) From the verses of Rhemnius Fannius,

"*Attica praterrea dicenda est amphora nobis
Seu cadus; hunc facies, si nostra addideris urnam,*"

it appears that the μετρητής=1½ amphora=8 galls., 2 qts., 0.46 pts. It contained 12 χοῦς, 72 ξέσται, and 144 κοτύλαι; and, by comparing the Roman and Greek capacious measures, we will perceive that the χοῦς corresponded in value to the *congius*, ξέστης to *sextarius*, and κοτύλη to *hemina*. Certain festivals at Athens were called *χοῦς*, because, according to Suidas, every man had a χοῦς of wine given him, and, as Athenæus declares, because Demophoön, king of Athens, offered a sweet-cake, and Dionysius the tyrant a crown of gold, as a prize to the first person who drank a χοῦς of wine. Κοτύλη derived its name from its cavity, and Galen mentions, that the κοτύλη and *hemina* were applied by the ancient physicians to the same use with the modern graduated glasses of our apothecaries, being vessels of horn, of rectangular or cylindrical shape, divided on the outside, by means of lines, into 12 parts, which they called ounces of measure (ὀγγύια μετρικαί), and corresponded to a certain number of ounces by weight (ὀγγύια σταθμικαί). Now the *hemina*, being ¾ of the amphora, weighed, when filled with wine, 10 uncia, so that the account of Galen is involved in doubt, inasmuch as the ounce by measure was hence ⅔ of that by weight. Τέταρτον, δέυδαφον, and κνάθος were respectively equal to the *quartarius*, *acetabulum*, and *cyathus* of the Romans. The remaining measures are κόγχη, μύστρον, χήμη, and κοχλιάριον, concerning which authors are slightly at variance. Cleopatra makes a greater and less κόγχη, the greater being the same with the δέυδαφον, the less ½ κνάθος; while Pliny (12, 25) makes the κόγχη a determinate measure. Μύστρον or μύστρον was borrowed, as its name imports, from the shell of the sea-mouse, and was of two kinds: the less and more common being ½ κνάθος, the greater ⅓ of the κοτύλη. Χήμη, derived also from some shellfish, was divided into the greater or rustic, =⅔ κοτύλη; and the less, or that used by physicians, =⅓ κοτύλη. Κοχλιάριον was equal to ⅓ χήμη.

2. *For things dry*.—The largest measure employed in the measurement of grain was Μέδομος=6 modii. Its divisions were τρίτος, ἑκτος, and ἡμικτον; and it contained 48 χοίνικες; so that the χοίνις equalled 4 κοτύλαι. The remaining measures were the same with the liquid measures. (See Tab. XVI. and XVII.)

§ 11. GRECIAN WEIGHTS.

The unit of weight was δραχμή or drachm=6 ὀβολοί. Ὀβολός equalled, according to Pollux, 8 χαλκοί, and the χαλκός, on the authority of Suidas =7 λέπτα; though Pliny makes the ὀβολός=10, and Suidas =6 χαλκοί. The Romans translated χαλκός *areolus*, and λέπτον *minula* or *minutia*. Though Rhemnius Fannius asserts that the Greeks used no weights less than the ὀβολός, the physicians employed some smaller, viz., *κεράτιον*, equal to the *siliqua* of the Romans, =⅓ uncia, and *σιτάριον*, or grain, =⅓ *siliqua*. The multiples of the ponderal unit, or the weights greater than the δραχμή, were the μνᾶ or mina=100, and *τάλαντον*=6000 δραχμαί. From libra, the later Greeks derived their λίτρα, which, in imitation of the Romans, they divided into 12 οὔγγια; the *τάλαντον* being, according to Livy (38, 38), 80 libræ, the libra=75 δραχμαί, and the δραχμή=⅓ libra=67.327 grs.; which result differs very little from that assigned by Wurm. Considering that a more correct value of the δραχμή might be obtained from the coins extant, he has followed the determinations of Letronne, and

assumed it= $82\frac{1}{2}$ Par. grs.=67.3349 grs. The values of the remaining weights are easily calculated, and may be seen in Tables XVIII. and XIX.

§ 12. GREEK COINS.

It is a matter of doubt when the Greeks commenced the coinage of metallic ores. The Oxonian marbles render it apparent that Phido, king of the Argives, about 700 B.C. struck some silver pieces, and there yet remain many Macedonian coins purporting to be struck five centuries B.C. Of all the Greek cities, Athens was most celebrated for the fineness of her silver, and the justness of its weight; and Xenophon mentions, that wherever Attic silver was carried, it sold to advantage. Indeed, their money deserves our particular attention, since we have unexceptionable evidence of its standard weight, and since it furnishes us with the knowledge we possess of the moneys of the other Greek cities. Copper was not coined till the 26th year of the Peloponnesian war, when Callias was a second time archon. It was soon after publicly cried down by a proclamation, which declared silver the lawful money of Athens; it, however, was shortly after again introduced. The common opinion, that the Athenians coined gold, is considered by some to be without sufficient authority. That they had no gold coin at the beginning of the Peloponnesian war, appears from the account given by Pliny of the treasure amassed in the Acropolis, which consisted of silver in coin, and gold and silver in bullion. Athenæus tells us that gold was very sparingly circulated in Greece, until the Phocians despoiled and plundered the temple at Delphi. But the gold-mines in the neighbourhood of Philippi were so improved by Philip of Macedon as to yield 1000 talents yearly, from which were struck the Philipps. When Greece became subject to the Romans, the standard of the conquerors was introduced, and there remain some gold coins which were struck subsequently to this event, of the weight of the aureus; one of these is preserved in the British Museum, which, though a little worn, bears the evidence of elegant workmanship: its impress on one side is the head of Minerva, and on the other an owl and oil-bottle, with the inscription AΘΗ, NH, the last two letters being placed under the oil-bottle. The Persian daric seems to have been the gold coin best known at Athens when in her lofty state of independence, and was called *στατήρ*, probably because it was originally the standard by which the *δραχμή* was adjusted; and subsequently the Philipps were standardised by means of the daric or the drachma. The Greeks counted by means of *τάλαντα, μναι, τετράδραχμα, and δραχμαί*, and their method of standardising excelled the Roman in point of ease and convenience, since their coins were weights also.

The brazen coins were *Χαλκοῦς*= $\frac{1}{2}$ *δβολός*; and *λέπτον*= $\frac{1}{4}$ *Χαλκοῦς*. The *δβολός* was so called, because, previously to the introduction of coined money, it was in the form of a small *spit*. The silver coins referring to the *δβολός* are, *τετράβολον, τριόβολον, διόβολον, ημιόβολον, and δίχαλκον*; but those are most celebrated which refer to the *δραχμή*, viz., *δίδραχμον, τρίδραχμον, τετράδραχμον*. Rome del'Isle mentions a Greek coin of silver, =11 *δραχμαί*, and Plato and Julius Pollux speak of the *πεντηκοντάδραχ-*

μον, which, were it a coin, must have been very large. *Δραχμή* quasi *δραχμή*, is interpreted a handful of 6 *δβολοί*, which were equal to it in value; it was employed in the computations of the Greeks, as the *sestertius* was by the Romans, Plutarch affording us many examples. The *δραχμή* varied in different countries determining the *τάλαντον* of corresponding variation; that of *Ægina* was called *παχέα*, since it equalled $1\frac{1}{2}$ Attic drachms, in contradistinction to the Attic, called *λεπτή*.

There is mention made of the *βοῦς*, a coin so called from the stamp of an ox with which it was impressed, reputed equal to the *δίδραχμον*, and coined of gold and silver. This was perhaps one of the most ancient Greek coins, being known to Homer, if we credit the testimony of Julius Pollux, and to it that immortal bard is supposed to allude when he sings of Glaucus changing his golden armour, worth 100 *βόες*, for the brazen one of Diomedes. The *τετράδραχμον*, or silver *στατήρ*, appears to have been the coin most generally in use among the Greeks. Livy informs us, that between the years 564 and 566 A.U.C. there were brought to Rome by M. Fulvius 118,000, by M. Acilius 113,000, by L. A. Regillus 34,700, and by Scipio Asiaticus 22,400 *τετράδραχμα*. So many specimens of them remain, that they are to be found at the present day in almost every collection. Letronne having accurately examined 500 of them, and arranged them according to the centuries in which they were struck, deduced the mean weight of the old Attic *δραχμή*, coined two centuries and more B.C., = $82\frac{1}{2}$ Par. grs.=67.3349 grs.; and its purity being .97, its value is 9d. 3.85 far., or 17 cts. 5.93 mills Federal currency. The latter Attic *δραχμή* was also found= $77\frac{1}{2}$ Par. grs.=63.236 grs.; and its value thereby determined is 9d. 0.487 far., or 16 cts. 5.23 mills. The *Χρυσός*, or golden *στατήρ*, weighed 2, and was valued at 20 *δραχμαί*; golden pieces were coined of double and half its weight; and though no Attic staters remain at the present day, there have been preserved some darics and Philipps, whose purity is very remarkable, being .979. The ratio of gold and silver varied at different periods. Herodotus estimates it as 13 to 1; in the dialogue of Hipparchus, commonly ascribed to Plato, it is 12 to 1; and Lysias, the orator, assumes it as 10 to 1, which last ratio was preserved without alteration.

The *Μνᾶ* (Mvā), according to Plutarch, equalled 75 *δραχμαί*, till the time of Solon, who made it contain 100. The Attic talent of silver equalled 60 *μναι*; that of *Ægina*, which was current at Corinth, was 100; and the Attic talent of gold was 600 *μναι*, according to the proportion of gold and silver just premised. For the values of the different coins, see Tables XX. and XXI.

NOTE.—The method of calculating the value of the old Attic drachm is as follows: its weight being 67.3349 mint-pound grs., or 67.3031 Troughton's grs., and its purity being .97, it contains 65.3148 mt. pd. grs., or 65.3422 Tr. grs. of pure silver. Now 371.25 mt. pd. grs. of pure silver being coined into 100 cts., and 5328 Tr. grs. of pure silver being coined into 792d. (see Pres. Adams's Report), the value of the old Attic drachm is hence determined in the Federal and Sterling currencies. In a similar manner, the values of the less Attic drachm and of the denarius have been calculated.
